Subject: Duke Energy Net Metering Proposal to NC Utilities Commission
To: <statements@ncu.net>, <Robert.Reives@ncleg.gov>, <Valerie.Foushee@ncleg.gov>, <contactgov@nc.gov>

I've just finished reading the Duke Carbon Plan. With the high reliance it shows on solar energy, I can't understand how the Duke Carbon Reduction Plan is consistent with the proposed change in Net Metering that Duke has made to the NC Utilities Commission. If Duke Energy is serious about reaching their goals on Carbon reduction, they need to encourage as much rooftop solar as possible. Their Net Metering changes would be a disincentive for homeowners to add rooftop solar. If we, as a state, are to meet our goals to reduce carbon emissions, we must not approve the Duke proposal to change Net Metering guidelines.

Please do what you can to maintain the current Net Metering program that will encourage more of the NC public to invest in solar for a brighter future.

Thank you.
