My names is Jonathan Sires and I'm from Charlotte NC . I am writing to express my support for net metering, which gives solar producers full compensation for the clean power they contribute to the grid. I recently had my home assessed for solar potential because as a parent I want the best future for my children and solar is clean safe and good for everyone . I want to see more distributed solar in North Carolina.

thanks J. Pal Sires

My names is Kevin Smith and I am a Solar Installer for Energy Wise Solutions. I am writing to express my support for net metering, which gives homeowners with solar PV Systems full compensation for the clean power they contribute to the grid.

With the real time energy monitoring that is used with these systems, our Customers get a greater appreciation of the Electricity they are using and take further steps to reduce their carbon footprint. Consider that 100% of the electricity generated by their Solar PV systems goes directly to their homes. Only 10% of the electricity generated at traditional power plants gets to homes due to losses through transformers, distribution lines and connections.

Through the efforts of initiatives like Solarize Charlotte, we can retire more fossil fuel burning Power Generating Plants and insure the future of our children.

I want to see more distributed solar in North Carolina.

Thanks so much for your consideration, Kevin

Clerk's Office
N.C. Utilities Commission

Since net metering protects the rights of North Carolinians to invest in solar energy, we believe it is essential the North Carolina Utilities Commission support net metering!

I have seen first-hand how effective and efficient distributed rooftop solar was for clean, affordable energy production, creation of jobs and overall prosperity of the community in Gainesville Florida as well as cloudy Germany. Since the NCUC supervises the monopoly power industry for us, the ratepayers and taxpayers, we ask you to allow more distributed solar in NC and continue the net metering that makes this clean, efficient, cost-saving energy possible!

Sincerely, Deb and Arne Arnason

Hello there,

My name is Robie Collins, and I live in Charlotte, North Carolina. I am writing to express my support for net metering, which gives solar producers full compensation for the clean power they contribute to the grid. I recently had my home assessed for solar power, because I am very concerned about the effects of fossil fuels on climate change. I realize the some people do not believe that climate change is real and that human activity is causing it. The fact is the science is settled on the issue. I further believe that we need to stop talking about whether there is climate change, and start talking about what each one of us can do. Solar energy is not the entire solution to climate change, but it is part of the solution. Net metering supports that solution, making is easier for more people to get involved solving this global crisis. Please consider supporting net metering.

Sincerely,

Robert P. Collins, Ph.D.

Hello,

My name is Mark Kinsley and I have recently settled in Belmont NC. I am writing to express my support for net metering which provides producers of solar energy fair compensation for the power they produce and contribute to the electricity grid. I am very interested in solar energy and hope to have a system installed once I have approval from my HOA. I am excited about the prospect of being able to generate as much (or perhaps more) electricity than is used by my fully electric vehicle and thus have a truly zero emission automobile.

Best regards,
Mark Kinsley

I'm from Charlotte, NC. I am writing to express my support for net metering, which gives solar producers full compensation for the clean power they contribute to the grid. I recently had my home assessed for solar potential because I am looking to provide a cleaner future for my family and would like to become more self reliant .

I want to see more distributed solar in North Carolina. So that the state can be a leader in reducing its carbon footprint .

Thanks for taking a stand for solar. Together we will preserve policies like net metering that allow solar energy to flourish in North Carolina and our own back yards.

For cleaner and cheaper energy,

-A Citizen of Charlotte North Carolina
