I would like to see NCUC require that communications companies (Spectrum, Frontier, etc) submit SAIFI and SAIDI as well as CAIFI and CAIDI data, so that NCUC and public customers can compare companies' service reliability, just as Electric and other utilities are required to do. Thanks for considering this improvement.

I believe it would be best for all to have a diverse energy supply and that is exactly what Rooftop Solar does for our state. We encourage more people to get rooftop solar when it is fair for all involved. If we are generating energy for a utility, we deserve to be compensated fairly for that. I realize we are using the grid, so I am willing to pay for those services, but surely that can be a flat monthly fee, just as it is now. Thanks Pat Phelan

Dukes Solar Plan

Message

This legislation is inherently unfair for those of us that obligated to rooftop solar for 20 year plans and the ensuing debt... to then have it changed. Duke has shown a tendency for money grabs to enrich their stockholders and penalize the rate payers. My neighbors and I are fighting a battle with Duke for charging us for street lighting that we don't individually have and our HOA pays directly to Duke monthly... now they want to renege on our solar program by raising our rates 20-30%. The NCUC is there to protect the rate payers of North Carolina and not enable monopolies like Duke to transfer our wealth to them. Steven Stewart 48 Big Sky Drive Leicester, NC 501-326-4655

Duke vs. solar

Message

The question is quite simple: Why does Duke Energy oppose private solar investments while at the same time they are also investing in solar projects across the nation. Something is amiss with their argument. While Duke claims that solar households do not pay their fair share, private households are generating energy for Duke Energy to make a profit by selling it to other businesses and households in the exact neighborhoods that the energy is generated. Furthermore, Duke makes a substantial profit each year by cancelling credit due to solar households (investors) each year in May, which they don't include in their argument. Regulators created a tyrannical monopoly when they allowed Progress Energy to merge with Duke Energy, and now we are seeing the results. NC is a state rich in sunshine which should prevent coal ash pollution which Duke has been found guilty of for years. By allowing solar to flourish in NC, we allow our state to become cleaner and better. Please restrain Duke Energy's greedy maneuvers which harm our beautiful state.

I am not sure what this is for?

Message

I concur with the objection to limit our savings for using Solar. We have a large investment in Solar and was given one plan and now Duke wants to change to another approach. We should be grand fathered at our plan that was agreed to at the time we installed our system. As a Solar owner, we invested in the future of our nation. We should not have to change after the fact!

I am personally concerned regarding the possible change in the net pricing of energy delivered to the grid. I installed solar panels some years ago based on the present net metering benefit, I would feel cheated if this were to changed. I would feel doubly cheated if this was an act by battery suppliers to increase their sales,' but would not be surprised.

Duke Energy should not be allowed to change the economics of your solar investment decision after the fact. Existing customers should be allowed to stay on their current net metering plan for the life of their system. What about the sell point of getting the panels in the first place (Cheaper monthly bills, and not mentioning the price we pay monthly for the panels. Something need to be done about this really. I will not be paying a large fee monthly for panels and a large monthly bill for service. Why would you promote something for energy saving and then turn around and start charging more money in a couple of years later, that is just not correct.

Payment for solar generation

Message

I paid over \$11,000 for rooftop solar on my house in 2021. I expected to be paid at a rate equal to what Duke Energy gets from selling the excess green energy I generate. Duke Energy can be the intermediary to help us make solar an attractive alternative for more homeowners and businesses. After all, they are guaranteed a great ROI and profit margin up front, so make them work a little harder for it. After all, we in NC and the whole world in general need more solar generation to stop this planet from cooking to death. Please make Duke pay us the rate we signed up for. Sincerely,
Michael Kohnle

I strongly oppose the Duke Energy proposal to reduce values given to residential customers who provide solar power to the grid. Renewable energy from a clean source should be encouraged by all means! Duke (and other energy providers) should encourage Solar installation and operation by homeowners. This is one way to help fight climate change - providing incentives- not taking them away or reducing credits. Vote NO on allowing Duke to get away with this...

I put solar panels on my roof to help my electric bills and our planet. I also work for a solar installer and hear everyday about the position that people in other states are put by power companies that have control of the politicians in those states. The outrageous add-ons to an electric bill that are redundant can add up to 300 dollars a month even though these people have solar and are being charged only 30 to 50 dollars for that commodity. The rest is for the privilege of being able to use a power company. I don't want to live in a state that allows their citizens to be robbed monthly. I enjoy calling North Carolina my home. Make them actually do the study that proves that we pay the same price for what we use and get paid very little back. Personally I got paid 17 dollars for this year and still have a bill every month. Thank you

It is suggested that Duke Power is trying to lower the value of my solar fed back into the grid by changing the net metering rules. After soliciting home owner to invest in our resources and help lower the demand for power, why would we be penalized, and create yet another financial drain on our lives. As it stands now the life expectancy of my panels goes to the end of my financial agreement to pay for them. It would be incredible to ask average citizens to in fact pay more for our power.

In a time where energy costs are rising. Duke is able to raise what they charge their customers. Customers who invested in solar capacity should be rewarded, not diminished by lower value for solar produced energy used by the grid. That would be illogical. It would be a double standard that benefits giant corporations and harms private citizens. Please consider what is truly fair.

I structured my system to be 100% offset. Even with 100% (a little less), I am still out of pocket more each month than I was with solely relying on the grid. I still pay Duke Energy \$15.99/month service fee. Also, the incentives Duke Energy did a great job in advertising we're difficult to find, confusing to apply for and impossible to find out where I am in queue. Ultimately, this effort was in vein and I am still unsure if I applied for the rebate correctly.
