**Subject:** Docket #E2 Sub 1076

I am a owner of solar panels for the past year. To my surprise when I received my Duke Energy bill for Jun 2019 557 KWH were not carried forward or credited to my account. Per your representative this relates to rule in Docket Number E2 Sub 1076. Basically this gives Duke Energy free energy and cost me approximately \$50.00. What is the rational behind this rule? Why am I not credited with providing this energy to the a multi -billion dollar corporation? This is another disincentive for people to convert to solar panels and decrease our impact on the environment. I request that this rule be revisited by your Commission and changed to a consumer friendly position of crediting our account for any excess energy produced by the 1 June date or change the cutoff date to 31 December of each year. Thank you.
