E-100 Sub 190

Message

NC Utilities Commission, Scores of scientists, solar companies and thousands of North Carolinians have been urging you to stop Duke Energy's climate-wrecking actions. Our communities are being devastated by hurricanes and other disasters. But Duke Energy leaders are greatly expanding the use of fracked gas and blocking cheaper solutions, like local solar-plus-storage, that could be implemented quickly. Please reject Duke Energy's monopoly-driven greenwashing and pursue climate solutions that work!

Message

NC Utilities Commission, North Carolina is on the wrong path. Duke's plans to gamble on high-risk, super-costly experimental technologies and to greatly expand the use of methane gas for power generation will only raise electric rates and worsen the climate crisis. Please reject Duke Energy's monopoly-driven greenwashing and pursue climate solutions that work, like local solar-plus-storage! North Carolina has twice the practical space on rooftops, parking areas, contaminated brownfields and vacant land close to towns and cities to meet our climate goals. It is past time for a genuine clean energy transition in North Carolina – not more false solutions.

Docket No. E 100, Sub 190.

Message

As a resident of NC and Duke customer, i am shocked and concerned by Duke's lack of renewables based planning. This stagnant, antiquated perspective is a threat to the citizens of this state. We want clean air, water and wildlife, Duke's plans do not support this and threaten to diminish the quality of life we enjoy in NC. Duke should not be able to compromise the ability of taxpaying citizens to use solar and should not be allowed to charge them for it. Further, they should not be allowed to pollute our air, water and land for any reason, including political fodder and pandering. It is truly pathetic to see a company flying in the face of science and undermining our well being without any consequence. I expect the state to look at the damage this will cause and protect us from these incredibly damaging and poor business practices. I say NO to Duke destroying this state!

Message

NC Utilities Commission, North Carolina is past due for a shift in the profit-driven monopoly mindset that increasingly harms communities, drives up power bills, and makes the climate crisis worse. Many experts agree that local solar-plus-storage is the best tool we have to address the climate crisis. It is clear that the only way North Carolina can finally get aligned with the climate scientists is to rapidly expand local solar. All Duke Energy's residential, commercial and nonprofit customers can share in the costs and benefits of local solar much like we currently pay for polluting power plants – through the electric rate system. Sincerely, Paul Kim

NC Utilities Commission, I am 76 years old and living on Soc. Sec. I can't afford my own rooftop solar, but I'd love to have my electric rate be part of a statewide rooftop system, not just Duke Energy's scam about paying extra to get some of our energy from renewable sources. Scores of scientists, solar companies and thousands of North Carolinians have been urging you to stop Duke Energy's climate-wrecking actions. Our communities are being devastated by hurricanes and other disasters. But Duke Energy leaders are greatly expanding the use of fracked gas and blocking cheaper solutions, like local solar-plus-storage, that could be implemented quickly. Message

While living in another state, I invested in rooftop solar. I owned an all electric home and my power bills were cut 75%. Why are you working to block this type of energy? Duke Power is a power hungry conglomerate and they only want to make money. But doing it at our expense is wrong. Thank you for your attention.

The renowned Rocky Mountain Institute (RMI) and the University of Texas-Austin (UTA) each have new studies showing that using clean energy resources at the local level can save customers millions, protect against power outages and avoid building costly and climate-wrecking fossil fuel power plants and transmission infrastructure. Virtual Power Plants (VPPs) are scaling up among many utilities nationally and can quickly offset the need for new gas-fired power plants and save huge amounts of money. The Sharing Solar approach will benefit all Duke Energy customers as the fastest, cheapest and fairest way to tackle the climate crisis and soaring power bills.

Docket

E-100 Sub-190

Message

New studies (from Rocky Mountain Institute and the University of Texas-Austin) make a strong argument for using clean energy resources at the local level, not only to protect against power outages but for the economic benefits: All that, above and beyond the obvious need to mitigate global warming by transitioning to renewable energy. Solar-plus-storage (SPS) needs to be seriously considered by Duke Energy, and NC WARN's new Sharing Solar proposal shows how they could be paying for new solar installations on roofs, parking lots and more through the rate system – the way we're now all forced to pay for dirty power. Duke's ratepayers deserve to see this option discussed openly, rather than swept under the rug. The NCUC needs to make that happen!
