NC Utilities Commission, United Nations Secretary-General António Guterres said recently that world leaders must quickly find “an exit ramp off the highway to climate hell.” Despite the horrifying weather disasters pummeling civilization this summer, Duke leaders plan to greatly expand their use of fossil fuels, gamble our future on high-risk and super-costly transmission and questionable nuclear technologies, and suppress clean energy climate solutions. There is no chance of North Carolina helping avoid Guterres’ “climate hell” without a rapid and large expansion of local solar-plus-storage.

No NC compromise on our climate commitments. No to higher rates f/Duke Energy customers. No to nuclear energy which threatens our surface and underground waters. Yes that Duke Energy pays their fair share.

Duke Energy's policies and proposals are dangerous and unacceptable. However, climate change is real and must be addressed for the sake of our future and the future of the planet. Focusing on clean and proven solar technology is our best path forward. I know because we use solar at our home. I love the savings. I love helping to save the planet. Also love selling back excess power to Duke Energy.

NC Utilities Commission, North Carolina is on the wrong path. Duke's plans to gamble on high-risk, super-costly experimental technologies and to greatly expand the use of methane gas for power generation will only raise electric rates and worsen the climate crisis. Please reject Duke Energy's monopoly-driven greenwashing and pursue climate solutions that work, like local solar-plus-storage! North Carolina has twice the practical space on rooftops, parking areas, contaminated brownfields and vacant land close to towns and cities to meet our climate goals. It is past time for a genuine clean energy transition in North Carolina – not more false solutions.

NC Utilities Commission, Scores of scientists, solar companies and thousands of North Carolinians have been urging you to stop Duke Energy's climate-wrecking actions. Our communities are being devastated by hurricanes and other disasters. But Duke Energy leaders are greatly expanding the use of fracked gas and blocking cheaper solutions, like local solar-plus-storage, that could be implemented quickly. Please reject Duke Energy's monopoly-driven greenwashing and pursue climate solutions that work!
