N.C. Utilities Commission

Dear Sir/Madam,

It has been brought to my attention that some changes to the way net metering is determined for solar panel customers of power companies. Currently, power generated by homeowner solar panels and distributed to the grid (unsold by homeowner) are credited at retail rates. The power company appears to want this changed to wholesale rates. I currently have 23 panels on my home and generate a reduction in my bill via the current Net Metering wording. I do not support changes to this current wording. I have homeowners who want to invest in solar panels, the current wording is proper. While I purchased my panels to help reduce my power bills, my primary goal is to utilize what we have, solar power from the sun. We all must work to reduce our carbon footprint. Solar Panels can become a huge part of this. Do not make changes that make the use of these and the expense of buying them less attractive. Thank you

Paula Neal
