Message

Dear North Carolina Utilities Commission, I am writing to urge you to reject Duke Energy's plan to repress renewables while aggressively expanding fossil fuels. The costs and benefits of solar plus storage should be shared by all customers in the same way that we pay for polluting power. There would be no up-front cost, plus financial incentives for adding solar power and battery storage on homes, businesses and others. I urge you to work for climate solutions that work.

Docket

E-100 Sub 190

Message

Dear Commission, Please stop Duke Energy from destroying the solar industry in North Carolina. Their assumption that residential solar is more costly to other users on the grid is absurd. We need to be innovating our electricity provision in the state not stepping back decades. Please carefully reconsider the Duke proposal and block their residential tariff changes.

Message

I urge you to consider the recommendations contained in the "Sharing Solar" proposal by NC Warn. Please do not allow Duke Power to stifle or curtail the adoption of solar power capture which many NC residents have invested in and from which the larger public benefits. Clean power will play an increasingly important part of the overall grid strategy, there is no need whatsoever to allow single players like Duke to determine rates through it's plans to increase the use of environmentally unfriendly power production. Please don't in effect say "no" to the right of individuals to positively impact this important area.

Docket Number: E-100 Sub 190

Message

As a NC resident I am strongly in favor of solar energy and storage solutions. Duke energy should be mandated to favor community, state and homeowner and business solar installations with favorable terms. I will note in favor of renewable and solar energy solutions.

Message

I am writing to urge the NCUC to adopt the recommendations of NC WARN to implement a local solar plus storage solution. Duke Energy's plan to expand solar power generation has already been accepted by the NCUC, however, Duke Energy's plan appears to push solar generation capacity out well into the future in favor of fossil-fuel derived generation in the short term. In addition, Duke Energy's plan appears to assume the solar generation would be large, remote solar farms. NC WARN's proposal is to located that generation capacity closer to where it is used, reducing transmission losses and thus reducing installation of excess generation capacity to counter those losses and the costs associated with that excess capacity installation. From NC WARN's report, they believe there is more than sufficient space on rooftops, parking lots, brownfields, and vacant land close to towns and cities to accommodate the required capacity. With rising costs in all areas, I urge the NCUC to adopt NC WARN's proposal and reduce the cost of short- and long-term power generation for the state as compared to the plan approved for Duke Energy.

Message

I urge you to reject Duke Energy's climate-wrecking plans and pursue climate solutions that work! Locating solar panels and storage batteries where power is used, particularly rooftops and parking areas, will generate jobs in towns and cities across the state, add protections during emergencies, and help all customers avoid annual rate increases while reducing climate pollution instead of expanding fossil fuels.

Docket

E-100 Sub 190

Message

Please protect our state from additional damage inflicted by carbon based power plants by rejecting the current proposal by Duke Energy. Duke Energy's plan stifles renewables while aggressively expanding fossil fuels, North Carolinians strongly support expansion of solar and other renewable energy sources. The billions planned for polluting plants would be better used to support the use of renewable energy. NC Warn has shared an alternate plan that doesn't depend on massive investment in pollution producing energy sources.

Docket

E-100 Sub 190

Message

NC electricity users don't pay a large up-front cost to build giant fossil fuel and nuclear power plants. We all share the cost of kilowatt-hours on our monthly power bills, and polls show that, overwhelmingly, North Carolinians and businesses would rather be buying clean power. Scores of solar companies and advocacy groups have already called to expand local solar instead of bulldozing farms and forests under Duke's plan. Sharing Solar will help all customers avoid constant rate hikes caused by the tens of billions of dollars Duke wants to spend on high-risk power plants and new transmission. SPS also adds much-needed resiliency for all power users – such as emergency facilities – during outages. North Carolina has twice the practical space needed to meet climate goals on rooftops, parking areas, contaminated brownfields and vacant land close to towns and cities, according to federal data. It's way past time for the NC Utilities Commission (NCUC) and Duke Energy to finally agree to a fair consideration of local SPS
