Our future depends on green energy and everything should be done to convince people to embrace it. We thought long and hard about putting solar panels on our roof -- it is not free -- but we felt it just as important as upgrading our windows and doors and insulation. Why now start going backwards? Again please consider implementation of any and all ways to lessen our dependence on fossil fuels. Our granddaughter is 11 years old and every day I think about what kind of world she faces. Our planet needs our help to secure the future for all of us. I'm doing everything I can, which may not be much as an individual, but collectively we can make a difference, and solar energy is a part of the equation. Encourage people in the right direction, don't make it more difficult to do the right thing!

Duke Energy should not be allowed to change the economics of my \$50,000 solar investment decision after the fact. Existing customers should be allowed to stay on their current net metering plan for the life of their system. Please conduct a full cost-benefit study of rooftop solar.

I am a taxpayer currently installing solar for my home to do my part for energy conservation. Apparently Duke Energy feels threatened by those citizens who making an attempt to move away from fossil fuels. I am absolutely against the proposition regarding net metering made in November 2021. Please side with those of us who are doing our part.

Good afternoon my name is Howard and Harrietta Jones and we live in Browns Summit NC We just went solar with now Pink Energy we have heard about the energy company wanting to change the way solar energy is handled we don't know much about all that but if it makes solar energy less cost effect then we hope you don't allow them to do this. We feel that solar is a good thing for the air and for community. Thanks

### Docket

E-100 Sub 180 - Residential solar electric net metering

### Message

Dear NCUC, We own a home in Fairview, NC and had rooftop net metering solar installed earlier this year. We love it! One of our prime motivations was to help our community, state and country meet its goals for renewable energy production and slow down climate change. But it needed to make economic sense for us, too. We oppose Duke Energy's plan to reduce the incentives to homeowners after our system was already installed. We should have a lifetime grandfathering of the economic terms and conditions we have irrevocably committed to. Please make sure we are fairly compensated for excess production at the same rate we are charged for consumption. For the same commodity, that is only fair. Please make sure to conduct an independent cost-benefit study of residential rooftop solar, and don't just take Duke's word for it. Please protect NC rooftop solar! Thanks, Brian and MaryJane Hunter 231 Smith Knolls Road Fairview, NC 28730

### Message

The two proposals from Duke Power increasing the rates for solar should be rejected as either may decrease the likelihood that solar will be chosen and used by our citizens due to increased out of pocket expense to consumers.
