DUKE ENERGY CAROLINAS, LLC
Docket No. E-7, SUB 1276
Adjust for approved regulatory assets and liabilities
For the Test Period Ending December 31, 2021

E1-10
NC5080 Narrative
Supplemental

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts other O&M, depreciation and amortization, income taxes, working capital and accumulated deferred taxes in the test period for approved regulatory assets and liabilities.

The impact to other O&M, and depreciation and amortization reflects the annualization of new amortizations out of docket E-7 Sub 1214 which began June 1, 2021, and changes to existing amortizations.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

The adjustment to working capital adjusts the balance for the regulatory assets to reflect what the balance will be as of the end of the update period of July 31, 2023.

The adjustment to accumulated deferred taxes adjust the tax effect recorded in the test period for the changes in the regulatory assets.

(B) 1st Supplemental Update

The adjustment to working capital adjusts the balance for the regulatory assets to reflect what the balance will be as of the end of the update period of June 30, 2023.

Adjustments to test year amortizations

Line No.	Description	Test Year Amount		Annualized Amount	
1	**General Plant Reserve Adjustment**				
2	0403500 - Depr of General Plant - System	(12,346)	[1]	(13,907)	[2]
3	The general plant reserve adjustment amortization was updated based on the 2018 Deprecia ion Study,				
4	which was implemented 6/1/2021. This amortization is not included in the NC3010 Annualize depreciation				
5	expense proforma. The rate base balance related to the General Plant Reserve Adjustment is updated				
6	in the NC3030 Post test year additions proforma.				
7					
8	**Amortization of loss on sale of Hydro plants**				
9	0407305 - Regulatory Debits - Hydro	1,257	[3]	1,138	[4]
10	Prior to the ruling in Docket E-7 Sub 1214, the balance was amor izing based on depreciation rates. The				
11	amortization of the loss on hydro sale was updated to an annual amount of $1,138k in Docket E-7 Sub				
12	1214. Amortization at the new rate was implemented on 6/1/2021.				
13					
14	**Non AMI Meters**				
15	North Carolina - 0407115 - Meter Amortization	$ 7,689	[8]	$ 7,903	[9]
16	The final accounting to reclass the net book value of the retired Non AMI Meters out of the asset				
17	accounts into the regulatory asset account occurred in June 2022. Therefore in the test year, the				
18	amortization/depreciation expense related to these meters was partially in depreciation expense and				
19	partially in amortization expense. Since as of the assets were retired prior to the capital cut off, proforma				
20	NC3030 Adjust for Post test year additions, removes the depreciation associated with those retired				
21	meters. This adjustment is to capture the full amortization expense. Amortization began 8/1/2018 and				
22	was to be over 15 years. To calculate annual amortization the adjustment took the NC Retail balance as				
23	of 6/30/2022 and divided it by 133 which is the number of months remaining of the amortization period,				
24	and multiplied that by 12.				
25	June 30, 2022 Balance	$ 87,586			
26	Number of months remaining	133			
27	Monthly Amortization	$ 659			
28	Annual Amortization	$ 7,903			
29					
30	**Amortization of Protected EDIT at ARAM**				
	0411115 - DFIT: Federal Excess DIT Amortn (NC Retail				
31	Customers - ARAM on Protected)	(24,092)	[5]	(23,372)	[5]
32	In 2021 there was a true up to the 2020 ARAM amortization.				
33					
34	**Amortization of CCR Coal Ash Spend**				
	0407324 - NC & MW Coal As Amort Exp Amortization of				
35	Tranche 2 CCR Coal Ash spend.	19,778	[6]	33,906	[7]
36	Tranche 2 amortization as approved in Docket E-7 Sub 1214 was implemented beginning 6/1/2021.

DUKE ENERGY CAROLINAS, LLC
Docket No. E-7 Sub 1276
Adjust for COVID impacts
For the Test Period Ending December 31, 2021

E1-10
NC5090 Narrative
Third Supplemental

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma calculates the COVID deferral amortization expense as of the rates effective date. Also included are adjustments to the test period to normalize late fees after the Governor's order was lifted on August 15, 2022 and O&M expenses to account for ongoing COVID expenses.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

(A) December Update

The COVID deferral has been updated for actuals for incremental bad debt and expenses through December 2022. There was also a formula error in the April 2021 line, which has been corrected and flowed through the proforma.

(B) 1st Supplemental Update

The COVID deferral has been updated for actuals for incremental bad debt and expenses through April 2023. The ongoing adjustment for safety in NC5090-4 has been reduced to $0. In the 2022 expense support, deferred O&M for call center overtime has been moved to the Return to Work line - it had been inadvertently shifted to "Other".

(C) 2nd Supplemental Update

The COVID deferral has been updated for actuals for incremental bad debt and expenses through May 2023.

(D) 3rd Supplemental Update

The COVID deferral has been updated for actuals for incremental bad debt and expenses through June 2023.

Amortize Customer Connect
For the Test Period Ending December 31, 2021

E1-10
NC5120 Narrative
Supplemental

E-1 Item 10 Adjustments Requirement
Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts depreciation and amortization expense associated with the regulatory asset related to Customer Connect. The Company was allowed to accrue a return on the regulatory asset in the same manner that CWIP balances accrue AFUDC through the project in-service date (4/5/2021). As of March 31, 2021, the return accrual ended and amortization over a 15-year period began.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

(B) 1st Supplemental Update
The deferral detail has been updated to reflect continued existing amortization through the updated capital cut off.

Amortize Deferred Billing
For the Test Period Ending December 31, 2021

E1-10
NC5130 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

In the E-7, Sub 1026 Commission Order Granting General Rate Increase, Findings of Fact and Conclusions - Item 40 (page 15), the Commission approved the deferral of the costs to effectuate the lighting audit and billing system change agreed to in paragraph 8.L. of the Stipulation between the Public Staff and the Company. On June 12, 2013, the Public Staff filed a Notice of Settlement in Principle with Duke Energy Carolinas. On June 17, 2013, Duke Energy Carolinas and the Public Staff entered into and filed the Stipulation resolving all of the issues in this proceeding between the two parties. The Stipulation provided that the Company shall conduct an audit and modify its billing system to effectuate the Company's proposed reduction in the extra facilities rate for all customers, including the additional facilities charges for existing lighting customers.

This pro forma adjusts depreciation and amortization expense associated with the regulatory asset related to these costs.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

DUKE ENERGY CAROLINAS, LLC
Docket No. E-7 Sub 1276
Adjust Coal Inventory
For the Test Period Ending December 31, 2021

E1-10
NC6010 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjustment reflects the Company's requirement for a level of coal inventory equal to the coal needed for a 40 day full load burn priced at the projected average delivered coal cost for the fuel billing period as discussed by Witness Verderame in Docket No. E-7, Sub 1263 plus the fixed transportation cost.

Days of coal inventory on the storage piles refers to "full load burn days". Therefore, one "day" of supply is equal to how much coal would be burned at any given generating unit if it was to run at full load for 24 hours straight. The projected full load burn for the entire coal-fired fleet in the Carolinas is 51,746 tons per day which means that if there are 40 days of supply on the system, then there are 2.1 tons (40 * 51,746) on the storage piles.

The Company does not use "average" burn to report how many "days" of inventory are in storage because the average burn for any given period can vary greatly due to many factors and it can over-state the amount of inventory in storage. For example, the biggest risk would be to run out of coal during a hot summer when the entire coal-fired fleet is needed to run at full load. By reporting the inventory using "full load burn", we have stated how many days our units can run during a critical time when they are all expected to be running at full load.

John Verderame Direct Testimony - Docket No. E-7, Sub 1263

Q. WHAT ARE THE PROJECTED COAL AND NATURAL GAS CONSUMPTIONS AND COSTS FOR THE BILLING PERIOD?

A. DEC's current coal burn projection for the billing period is 3.3 million tons, compared to 5.3 million tons consumed during the test period. DEC's billing period projections for coal generation may be impacted due to changes from, but not limited to, the following factors: (1) delivered natural gas prices versus the average delivered cost of coal; (2) volatile power prices; and (3) electric demand. Combining coal and transportation costs, DEC projects average delivered coal costs of approximately $91.89 per ton for the billing period compared to $78.22 per ton in the test period. This increase in delivered costs is primarily driven by increased coal commodity costs due to limited coal supply and increased domestic and international demand. This includes an average projected total transportation cost of $29.63 per ton for the billing period, compared to $31.68 per ton in the test period. This projected delivered cost, however, is subject to change based on, but not limited to, the following factors: (1) exposure to market prices and their impact on open coal positions; (2) the amount of Central Appalachian coal DEC is able to purchase and deliver and the non-Central Appalachian coal DEC is able to consume; (3) changes in transportation rates; (4) performance of contract deliveries by suppliers and railroads which may not occur despite DEC's strong contract compliance monitoring process; and (5) potential additional costs associated with suppliers' compliance with legal and statutory changes, the effects of which can be passed on through coal contracts.

Adjust cash working capital for present revenue annualized and proposed revenue
For the Test Period Ending December 31, 2021

E1-10
NC6020 Narrative
Third Supplemental

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts cash working capital to incorporate the impact of the other pro forma adjustments. It also calculates the additional cash working capital required as a result of the proposed increase in rates. The adjustment is in accordance with the Commission's March 21, 2016 order in Docket No. M-100 Sub 137.

(B) 1st Supplemental Update
Processed updated Cash working capital based on changes from Supplemental updates
Updated Lincoln Siemens lead/lag days from (15.21) to 36.03 on 'COS-920 Rev & Exp LL Detail' tab - see PSDR 102-2

Docket No. E-7 Sub 1276
Synchronize interest expense with end of period rate base
For the Test Period Ending December 31, 2021

E1-10
NC6030 Narrative
Third Supplemental

E-1 Item 10 Adjustments Requirement
Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment
This pro-forma adjusts income taxes to reflect the tax impact that results from annualizing interest expense based on the end-of-period, adjusted rate base.
The impact to income taxes was determined as follows:
First, multiply rate base after all pro-forma adjustments have been made by the long-term debt ratio to calculate an adjusted long-term debt balance. Second, multiply the adjusted long-term debt balance by the end of year cost of long-term debt to calculate annualized interest expense. Third, subtract interest expense incurred during the test period from annualized interest expense and multiply the difference by the statutory tax rate.

(B) 1st Supplemental Update
Updated Interest Synchronization based on changes from the supplemental updates and the debt rate as of April 2023.

(C) 2nd Supplemental Update
Updated Interest Synchronization based on changes from the supplemental updates and the debt rate as of May 2023.

(D) 3rd Supplemental Update
Updated Interest Synchronization based on changes from the supplemental updates and the debt rate as of June 2023.

NC6040 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

On November 18, 2021 Governor Roy Cooper signed into law the 2021 Appropriations Act which affects various North Carolina Taxes including franchise taxes.

The Act simplifies the franchise tax calculation. Effective with the 2022 income tax returns filed in 2023, franchise tax will be calculated on a corporation's North Carolina apportioned net worth. This change will result in a reduction in the Company's Franchise tax expense. This proforma, adjusts franchise tax to the anticipated new level under the new law.

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

As noted in Public Staff Data request 102-14 this pro forma reflects a correction to the Per Books Lead Lag amount. While responding to data request 102-14, the Company discovered an error in the calculation of Cash Working Capital Related to NC Sales Tax which also impacted the calculation of remaining other operation & maintenance expense.

Adjust Rate base for Unprotected EDIT
For the Test Period Ending December 31, 2021

E1-10
NC6090 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This proforma reflects an adjustment to rate base to reflect flowing back additional Unprotected EDIT to customers using a levelized EDIT Rider consistent with what was done in Docket E-7 Sub 1214. The amounts are offsets to rate base as of the end of the test year. With levelized give back, the amounts should not be included in rate base.

This proforma reflects an adjustment to rate base for the additional Unprotected EDIT. The company is proposing to flow these additional amounts back to customers through the exisitng levelized EDIT rider as shown in Bowman Exhibit 3.

DUKE ENERGY CAROLINAS, LLC
Docket No. E-7 Sub 1276
Normalize for Storm Costs
For the Test Period Ending December 31, 2021

E1-10
NC7010 Narrative
Third Supplemental

E-1 Item 10 Adjustments Requirement
Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts operation and maintenance expenses and income taxes in the test period to normalize for storm costs.

The impact to operation and maintenance expense is determined by calculating an inflated average level of storm costs experienced by the Company over the last ten years and then subtracting storm restoration costs incurred during the test period to adjust for a normalized amount of costs.

(A) December Update
NC7010-2 has been updated to reflect final 2021 storm costs, as well as updated estimates for the 2022 storm costs through December 2022. The CPI and PPI data has also been updated to reflect the latest inflation data on NC7010-1. Also, in the original filing, within a couple of the storm years, the inflation adjustments in NC7010-1 column "N" had inadvertently left off the 2022 inflation impacts. Those have been corrected.

(B) 1st Supplemental Update
NC7010-2 has been updated to reflect the most current estimates for the 2022 storm costs as of April 2023, which also flow to NC7010-1. The proforma has been updated with the latest estimates and support, but the revenue requirement is not impacted.

(C) 2nd Supplemental Update
NC7010-2 has been updated to reflect the most current estimates for the 2022 storm costs as of May 2023, which also flow to NC7010-1. The proforma has been updated with the latest estimates and support, but the revenue requirement is not impacted.

(D) 3rd Supplemental Update
NC7010-2 has been updated to reflect the most current estimates for the 2022 incremental system storm costs as of June 2023, which also flow to NC7010-1.

Also, two corrections were made to the proforma. First, the test period storm costs were in error and the correct amount is now reflected, including both COS-0331 and COS-0332.

In addition, the 2020 Storm Year, specifically the incremental costs for the January 11 wind event on NC7010-2, which was incorrectly stated in the initial proforma was updated.

DUKE ENERGY CAROLINAS, LLC
Docket No. E-7 Sub 1276
Adjust for Storm Securitization Deferrals
For the Test Period Ending December 31, 2021

E1-10
NC7040 Narrative
Third Supplemental

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma calculates the amortization expense and impacts to rate base related to the Servicing and Administration fee overcollection and the Upfront bond issuance costs overcollection as a result of the NC Storm Securitization docket.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

(A) December Update
Actuals have been updated for NC7040-2 - S&A Costs. Also included is an update of the admin fee component of the deferral. The projections of the admin fee through the capital cutoff was inadvertently overstated.

(B) 1st Supplemental Update
Actuals have been updated for NC7040-2 - S&A Costs through April 2023.

(C) 2nd Supplemental Update
Actuals have been updated for NC7040-2 - S&A Costs through May 2023.

(D) 3rd Supplemental Update
Actuals have been updated for NC7040-2 - S&A Costs through June 2023. Also, the Second Supplemental proforma was still extended to the original capital cutoff date of July 2023 - the cutoff has been adjusted to be June 2023.

Docket No. E-7, SUB 1276
Revenue Annualization
For the Test Period Ending December 31, 2021

E1-10
NC1010 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma represents the additional North Carolina retail revenues, uncollectible expense, and regulatory fees required to reflect the annualization of rates in effect on January 6, 2023. Fuel is neutralized in the case through this adjustment and the fuel pro forma adjustment.

The impact to O&M expenses for uncollectible expense and the NCUC fee is determined by multiplying the impact to revenue by the uncollectible rate and the NCUC assessment rate.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

Docket M-100 Sub 142

STATE OF NORTH CAROLINA
UTILITIES COMMISSION
RALEIGH

DOCKET NO. M-100, SUB 142

At present, the Commission's regulatory fee for noncompetitive jurisdictional revenues is 0.13%. Pursuant to N.C.G.S. § 62-302(b)(3), the Commission has reviewed the estimated cost of operating the Commission and the Public Staff for the next fiscal year, including the reserve margin permitted under N.C.G.S. § 62-302(a), and has determined that the regulatory fee for noncompetitive jurisdictional revenues should be increased to 0.14%, effective July 1, 2022.

IT IS, THEREFORE, ORDERED as follows:

1. That the regulatory fee for noncompetitive jurisdictional revenues shall be, and is hereby, set at 0.14%, effective July 1, 2022; and

2. That the Chief Clerk shall serve this Order on all utilities regulated by the Commission.

ISSUED BY ORDER OF THE COMMISSION.

This the 30th day of June, 2022.

NC1020 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This adjustment to revenue reflects the elimination of the estimated unbilled revenue the Company recorded for the difference between kWh sales billed during the test period and kWh used by customers during the test period.

The impact to income taxes was determined by multiplying taxable income by the statutory tax rate.

NC1030 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma reflects adjustments to revenue, O&M, general taxes and income taxes to update various other revenues.

These fees are recoded in miscellaneous revenue accounts. The impact to revenue for fees is determined by multiplying the number of units for NC in the test period by the current rate to arrive at current revenues. The test period units are then multiplied by the proposed rate to arrive at the proposed revenue. The difference between the current and proposed other revenues is the adjustment amount.

The impact to O&M for the NCUC Regulatory fee and uncollectibles is determined by multiplying the impact to revenue by the assessment rates.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

NC1040 Narrative
Application

E-1 Item 10 Adjustments Requirement
Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment
This pro forma annualizes revenue, fuel expense, operation and maintenance expense, and income taxes to reflect changes in the number of customers and usage per customer during the test period.

The impact to revenue was determined as follows:

To determine the additional revenue requirement resulting from customer growth, the monthly increase in number of customers was multiplied by the applicable average monthly kWh consumption per customer to derive the annualized change in kWh consumption based on the number of customers at the end of the test period.

The impact to fuel expense was determined by multiplying the 'Customer growth adjustment to KWH sales - NC kWh adjustment' by the most recent approved fuel rate (excluding EMF).

The impact to other operation and maintenance expense is determined by:

Variable O&M Adjustment - adjusts energy related O&M for the change in KWH due to the change in growth and usage per customer.

The Per Bill Adjustment - adjust O&M for the change in variable cost due to the change in number of bills to be generated.

Regulatory Fee - multiplying the impact to revenue by the statutory regulatory fee percentage rate and the uncollect bles rate.

The impact to income taxes was determined by multiplying taxable income by the statutory tax rate.

This adjustment updates revenues to reflect customer growth experienced beyond the test period, through July 2023.

Notes:
Two approved methods are used for estimating the growth adjustment depending on the class/schedule

"Regression" refers to the use of Ordinary Least Squares Regression
"Customer" refers to the use of the Customer by Customer approach

Weather Normalization
For the Test Period Ending December 31, 2021

E1-10
NC1050 Narrative
Application

E-1 Item 10 Adjustments Requirement
Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma reflects adjustments to revenue, fuel expense, operation and maintenance expense, and income taxes to normalize weather conditions experienced during the test period.

The impact to revenue is determined as follows:
1. The percentage of NC Retail kWh sales for the test period is calculated by dividing NC Retail kWh sales by Retail kWh sales.

2. The NC Retail kWh weather adjustment for the test period is determined by multiplying the percentage of NC Retail kWh sales by the Retail kWh weather adjustment. This Retail kWh weather adjustment is calculated by determining the effect that temperature variances have on kWh sales and then pricing out that change in kWh sales for each customer class during the test period at the rates in effect during the test period.

The weather normals used in deriving the temperature corrections for the year 2021 reflect a 30 year average of heating and cooling degree days/hours based on the years 1990-2020. The derivations of the individual monthly weather normals start with calculating the simple average of the hourly temperatures from the following three weather stations:

A. Charlotte Douglas International Airport
B. Greensboro Piedmont Triad Airport
C. Greer Greenville - Spartanburg Airport

Next, degree hours are calculated by taking the average daily temperatures and subtracting them from a base (65 degrees Fahrenheit for CDD's and 65 degrees Fahrenheit for HDD's). The resulting CDD's and HDD's are summed for each day to determine the daily heating or cooling degree hours over the billing period.

3. The average price by class for the test period is calculated by dividing NC Retail present revenues annualized (dollars in thousands) by NC Retail kWh sales.

4. The weather adjusted revenue for the test period is calculated by multiplying the NC Retail kWh weather adjustment by the average price by class.

The impact to fuel expense is determined by multiplying the NC Retail kWh weather adjustment by the most recent approved fuel rate.

The impact to other operation and maintenance expense is determined by multiplying the impact to revenue by the statutory regulatory fee percentage rate and the uncollectibles rate.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

Docket No. E-7 Sub 1276
Update fuel costs to approved rates
For the Test Period Ending December 31, 2021

E1-10
NC2010 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts fuel expense, purchased power, other operation and maintenance expense and income taxes for fuel clause expense during the test period to match the fuel clause revenues derived from the fuel factor approved by the Commission in Docket No. E-7, Sub 1263. By matching the expenses to the revenue, this adjustment ensures that no increase is requested in this proceeding related to fuel and fuel-related expenses that are recoverable through the fuel clause.

The impact to fuel and fuel related expenses is determined as follows:
1. The total fuel clause expense (including fuel, purchased power and reagents & by-products) allocated in cost of service is eliminated from the test period.

2. The pro forma fuel clause expense is calculated by multiplying the NC Retail kWh sales for the test period by the most recent approved fuel rate.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

E1-10
NC2030 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This proforma adjusts revenues and expenses to remove amounts that are associated with cost recovery through non-fuel riders. Rate base is also adjusted to eliminate the amounts recorded on the Company's financial statements as of December 31, 2021 related to the riders as outlined on NC2030-1.

DUKE ENERGY CAROLINAS, LLC
Docket No. E-7 Sub 1276
Adjust O&M for executive compensation
For the Test Period Ending December 31, 2021

E1-10
NC2040 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro-forma adjusts operation and maintenance expense and income taxes for officers' compensation to eliminate a portion of the salary for the top 5 executives.

The impact to operation and maintenance expense is determined as follows:

Eliminate 50% of the compensation of the Chief Executive Officer (CEO), Chief Financial Officer (CFO), Chief Operating Officer (COO), Chief Legal Officer (CLO), and Duke Energy Carolinas Executive Vice President and Chief Executive Officer (CEO) allocated to Duke Energy Carolinas in the test period.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

DUKE ENERGY CAROLINAS, LLC
Docket No. E-7 Sub 1276
Normalize O&M Labor Expenses
For the Test Period Ending December 31, 2021

E1-10
NC2050 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro-forma adjusts operation and maintenance expense, general taxes and income taxes to normalize operation and maintenance labor costs.

The impact to operation and maintenance expense is determined as follows:

1. The impact to Salaries and Wages was calculated by comparing the annual test period salaries and wages to the salaries and wages as of 7/1/2022 per Human Resources.

2. The percentage of electric operation and maintenance expense to apply to the salaries and wages adjustment is calculated as follows: total operation and maintenance labor per Form 1, Page 354 less reimbursement of Catawba Joint Owners is divided by total salaries and wages excluding other work in progress and allocation of clearing accounts per Form 1, Page 355. The adjustment calculated in Step 1 is multiplied by this percentage.

3. The impact related to fringe benefit costs is calculated by multiplying the salaries and wage adjustment calculated in Step 1 by the fringe benefits contribution rate. The fringe benefits contribution rate is calculated by dividing account 926 - employee pensions and benefits booked during the test period by total operation and maintenance labor per Form 1, Page 354.

4. The impact to operation and maintenance expense also reflects an adjustment to restate variable short and long term pay booked during the test period to target.

The impact to general taxes reflects the change in the FICA tax base. To adjust general taxes, the salaries and wages adjustment calculated in Step 1 is multiplied by the percentage of wages subject to OASDI by the OASDI tax rate for employers. Next, the adjustment due to Medicare tax is calculated by multiplying the salaries and wages adjustment calculated in Step 1 by the Medicare tax rate.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

Fact Sheet

SOCIAL SECURITY

2022 SOCIAL SECURITY CHANGES

Cost-of-Living Adjustment (COLA):

Based on the increase in the Consumer Price Index (CPI-W) from the third quarter of 2020 through the third quarter of 2021, Social Security and Supplemental Security Income (SSI) beneficiaries will receive a 5.9 percent COLA for 2022. Other important 2022 Social Security information is as follows:

Tax Rate	2021	2022
Employee	7.65%	7.65%
Self-Employed	15.30%	15.30%

NOTE: The 7.65% tax rate is the combined rate for Social Security and Medicare. The Social Security portion (OASDI) is 6.20% on earnings up to the applicable taxable maximum amount (see below). The Medicare portion (HI) is 1.45% on all earnings. Also, as of January 2013, individuals with earned income of more than $200,000 ($250,000 for married couples filing jointly) pay an additional 0.9 percent in Medicare taxes. The tax rates shown above do not include the 0.9 percent.

Docket No. E-7 Sub 1276
Update Benefit Costs
For the Test Period Ending December 31, 2021

E1-10
NC2060 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This proforma adjusts operation and maintenance expense and income taxes for changes in benefits costs.

The impact to operation and maintenance expense reflects the annual level of pension, OPEB, Active Medical, FAS112 and non-qualified pension benefits based on a report from the Company's third party consultant less actual amounts in the test period for these expenses.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

Adjust vegetation management expenses
For the Test Period Ending December 31, 2021

E1-10
NC2070 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts operation and maintenance expenses and income taxes for increased vegetation management expenses not included in the test period. The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

Docket No. E-7, SUB 1276
Adjust test year expenses
For the Test Period Ending December 31, 2021

E1-10
NC2080 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts operation and maintenance expenses and income taxes in the test period to proactively adjust for mischarges as a result of human error in coding Company expenses as well as agreed upon adjustments.

The Company also made an adjustment to test year labor for lobbying expenses charged above the line prior to the issuance of new NCUC guidance on lobbying in Q3 of 2021.

Adjust Aviation Expense
For the Test Period Ending December 31, 2021

E1-10
NC2090 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts operation and maintenance expense, general taxes and income taxes for aviation expenses to be excluded from the test period.

The corporate aviation operation and maintenance, depreciation, and return expense booked during the test period is multiplied by the percentage of corporate aviation expense to be excluded from test period expense. Fifty percent is being excluded.

The impact to general taxes is determined by multiplying corporate aviation general taxes booked during the test period by the percentage of corporate aviation expense to be excluded from test period expense.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

DUKE ENERGY CAROLINAS, LLC
Docket No. E-7 Sub 1276
Levelize Nuclear Refueling Outage Costs
For the Test Period Ending December 31, 2021

E1-10
NC2100 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts operation and maintenance expenses and income taxes to levelize nuclear refueling outage costs.

The impact to operation and maintenance expenses was determined by subtracting annualized outage amortization expense from test period outage expense.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

DUKE ENERGY CAROLINAS, LLC
Docket No. E-7, SUB 1276
Annualize non labor O&M
For the Test Period Ending December 31, 2021

E1-10
NC2110 Narrative
Application

E-1 Item 10 Adjustments Requirement
Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro-forma annualizes test period operation and maintenance expenses excluding fuel, purchased power, and labor and benefit costs to reflect the change in unit costs that occurred during the test period.

The impact to operation and maintenance expenses is determined as follows:

Starting with per book operation and maintenance expense, excluding fuel and purchased power, as stated on Bowman Exhibit 2 page 1 and subtracting all pro-forma adjustments that adjust the test period amount.

Next, subtract the salaries and wages and fringe benefits from operation and maintenance expenses.

Finally, the impact to operation and maintenance expense is calculated by multiplying total adjusted non-labor operation and maintenance expenses by the average inflation rate.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

DUKE ENERGY CAROLINAS, LLC
Docket No. E-7 Sub 1276
Adjust reserve for end of life nuclear costs
For the Test Period Ending December 31, 2021

E1-10
NC2120 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

Nuclear Fuel

The cost of the last nuclear fuel core is not captured in the costs of decommissioning and is not expected to have any salvage value. As this last core of nuclear fuel would benefit the ratepayers served prior to the end of life of the nuclear plant, a reserve is accrued so that there is a better matching of cost and benefit for ratemaking purposes. The annual amortization expense adjustment is determined by dividing the current projected remaining value of the last core of nuclear fuel at the end of life of each unit by the number of years remaining in the unit's life less the amount of amortization in the test year. The reserve is an offset to rate base in the cost of service.

Nuclear Materials and Supplies

Similar to the discussion above for the final nuclear fuel core, the Company accrues a reserve for end of life nuclear materials and supplies (M&S). The nuclear M&S inventory will have little or no salvage value at the time of decommissioning. The annual amortization expense adjustment was determined by dividing the projected inventory balance at the end of life of each unit by the number of years remaining in the unit's life less the amount of amortization in the test year. Duke Energy Carolinas assumed in its computations that the current test year balance of nuclear M&S would be the projected inventory balance at the end of life of each unit.

Adjust O&M for change in NCUC regulatory fee
For the Test Period Ending December 31, 2021

E1-10
NC2130 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts other operation and maintenance expense for the impact of the change in the NCUC fee since the last rate case.

The impact to operation and maintenance expense is determined as follows:

The regulatory fee expense was recalculated using the base revenues subject to regulatory fee in the test period times the new rate of 0.0014 effective July 1, 2022.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

Notification of revised NCUC regulatory reporting fee [1]

Regulatory Fee Reporting

The regulatory fee legislation for public utilities and electric membership corporations was enacted by the North Carolina General Assembly to provide funding to pay the expenses incurred by the Commission and Public Staff in regulating public utilities in the interest of the using and consuming public. The regulatory fee requirements are administered in compliance with G.S. 62-302.

The Commission's Fiscal Management Division is responsible for the collection, deposit, accounting, and reporting of the regulatory fee for the Commission.

G.S. 62-302 and Commission Rule R-15 state in part that: "The regulatory fee imposed under this section is due and payable to the Commission on or before the 15th day of the second month following the end of each quarter. Each public utility subject to the regulatory fee shall on or before the date the fee is due for each quarter, prepare and render a report on a form prescribed by the Commission."

**** Effective July 1, 2022, the Regulatory Fee Percentage Rate will increase to 0.14% (0.0014) for state fiscal year 2022-2023.** The two rates for the telephone subsection (h) and (m) companies will remain the same as .04% (.0004) and .02% (.0002) respectively.

Adjust for non-residential credit card fees
For the Test Period Ending December 31, 2021

E1-10
NC2140 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts operation and maintenance expenses for non-residential credit card fees costs by using 2021 transactions and applying a unit cost per transaction.

DUKE ENERGY CAROLINAS, LLC
Docket No. E-7 Sub 1276
Annualize Depreciation on year end plant balances
For the Test Period Ending December 31, 2021

E1-10
NC3010 Narrative
Application

E1-10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro-forma annualizes depreciation expense, income taxes, and amortization of investment tax credit to reflect a full year's level of depreciation on plant in service as of the end of the test period.

The impact to depreciation expense is determined by multiplying current depreciation rates times the level of plant in service as of the end of the test period and then subtracting actual depreciation expense booked during the test period.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

The impact to amortization of investment tax credit reflects the difference between actual amortization booked during the test period and the new annual level of amortization based on the new depreciation study.

[1] Total Plant-in Service excludes Non-Depreciable Assets and the Capitalized Asset Retirement Costs related to FAS 143.
[2] Fossil land rights, along with some Intangible and Hydro assets are fully depreciated/amortized and no longer accrue any expense.
[3] The TEP credit is due to an impairment recorded as part of the Progress Merger.
[4] The per book intangible amount reflects a representative level of amortization expense on a go forward basis.
[5]Depreciation expense on vehicles and construction equipment is recorded to 803 accounts, therefore it is excluded above.
[6] The calculated accrual column above assumes 12 months of depreciation. If any assets were added during the 12 month period, depreciation would be calculated based on the in-service date in the actual 12me depr booked column above.

Annualize Property Tax on Test Year Plant Additions
For the Test Period Ending December 31, 2021

E1-10
NC3020 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro-forma annualizes general taxes and income taxes to reflect an annual level of expense for property taxes based on the end of the test period level of plant investment.

The impact to general taxes is determined by calculating an annual level of property tax expense equal to estimated annualized property tax less property taxes booked during the test period.

The impact to income taxes was determined by multiplying taxable income by the tax rate.

E1-10
NC3030 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts depreciation expense, general taxes, income taxes, electric plant in service, and accumulated depreciation to reflect net additions to plant in service.

The impact to operating income is determined as follows:

The adjustment to depreciation expense reflects a full year's level of depreciation on net additions to plant in service by multiplying the projected additions to net electric plant by depreciation rates based on the new depreciation study.

The adjustment to general taxes reflects estimated annual property tax expense related to the net additions to plant in service. Property taxes are estimated by multiplying the projected net additions to electric plant by a combined North Carolina and South Carolina property tax rate.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

The impact to rate base is determined as follows:

The adjustment to electric plant in service reflects projected updates to electric plant in service through July 2023.

The adjustment to accumulated depreciation reflects projected updates to the accumulated depreciation balance through July 2023 and annualized depreciation expense based on forecasted July 2023 electric plant in service balances.

[1] NC3030-5 Ann Cal - Adjustment to Accumulated Depreciation for Annualization of Depreciation Expense at July 31, 2023
[2] Per NC2030-3.1 REPS, 3.70% of Solar Mocksville costs are collected in the REPS rider and should be excluded for purposes of this analysis.
[3] Per NC2030-3.1 REPS, 4.10% of Solar Monroe costs are collected in the REPS rider and should be excluded for purposes of this analysis.
[4] Per NC2030-3.1 REPS, 4.10% of Solar Woodleaf costs are collected in the REPS rider and should be excluded for purposes of this analysis.
[5] Per NC2030-10.2 CPRE, 100% of Solar Gaston and Maiden Creek costs are collected in the CPRE rider and should be excluded for purposes of this analysis.
[6] Per NC2030-3.1 REPS, 40.50% of Solar PVDG costs are collected in the REPS rider and should be excluded for purposes of this analysis.
[7] Per NC2030-10.2 CPRE, 100% of network upgrades related to late/advanced stage solar costs are collected in the CPRE rider and should be excluded for purposes of this analysis.
[8] Excluding the portion of net change related to Solar costs that are collected in the riders.

72						
73	TOTAL PLANT-IN-SERVICE	$ 49,272,970		$ 1,347,332	$ 1,320,056	$ 27,276

[1] Total Plant-in Service excludes Non-Depreciable Assets and the Capitalized Asset Retirement Costs related to FAS 143.
[2] Fossil land rights, along with some Intangible and Hydro assets are fully depreciated/amortized and no longer accrue any expense.
[3] The TEP credit is due to an impairment recorded as part of the Progress Merger.
[4] The per book intang ble amount reflects a representative level of amortization expense on a go forward basis.
[5]Depreciation expense on vehicles and construction equipment is recorded to 803 accounts, therefore it is excluded above.
[6] The calculated accrual column above assumes 12 months of depreciation. If any assets were added during the 12 month period, depreciation would be calculated based on the in-service date in the actual 12me depr booked column above.
[7] Forecasted Contra AFUDC balances are not available, these lines will be updated with July 31, 2023 actuals.
[8] Forecasted amounts provided by Duke Energy Carolinas - Financial Planning
[9] NC3010-2 Adjustment of Depreciation Expense to Reflect Plant in Service for 12 Months Ended December 31, 2021
[10] NC3030-8 Twelve Months of Depreciation Expense Forecasted through July 31, 2023

Adjust Depreciation for New Depreciation Rates
For the Test Period Ending December 31, 2021

E1-10
NC3040 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts depreciation expense to reflect the updated depreciation rates resulting from a new depreciation study. Additionally this proforma is deferring 50% of the NC Retail annual impact of accelerating steam plant lives in the new depreciation study.

The impact to rate base is adjusting accumulated depreciation to reflect the updated depreciation rates resulting from a new depreciation study, creating a regulatory asset for one year of deferral and related ADIT.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

Application

E1-10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts income taxes, depreciation and amortization expense, electric plant in service and accumulated depreciation to remove the impact of the Progress merger costs included in other proformas.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

Docket No. E-7 Sub 1276
Amortized Deferred Environmental ARO Costs
For the Test Period Ending December 31, 2021

E1-10
NC4010 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro-forma adjusts amortization expense, income taxes and rate base for the amortization of deferred environmental costs related to the removal of coal ash.

The impact to depreciation expense reflects a 5 year amortization of deferred costs to remove coal ash costs. The balance of the deferral is projected through December 31, 2023 and includes a return during the deferral period.

The impact to Rate Base includes the additional deferred costs through December 31, 2022 and additional ADIT on the deferred balance change.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

For the Test Period Ending December 31, 2021

E1-10
NC5010 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

The impact to other O&M, and depreciation and amortization reflects the elimination of test year costs for regulatory assets that will be fully amortized before the anticipated rates effective date of January 1, 2024.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

The adjustment to working capital eliminates the expiring regulatory assets balances as of 12/31/2021.

The adjustment to accumulated deferred taxes adjusts the tax effect recorded in the test period for the changes in the regulatory assets.

Amortize Rate Case Costs
For the Test Period Ending December 31, 2021

E1-10
NC5020 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This proforma adjusts operation and maintenance expense and income taxes for the amortization of rate case costs for Docket No. E-7, Sub 1214 and for Docket E-7, Sub 1276.

The rate case costs requested for recovery are offset by applying over-amortization of severance to reduce the balance.

Rate case costs associated with Docket E-7 Sub 1276 include actual costs incurred through September 2022 and a projection of costs through rates effective date.

The impact to income taxes is determined by multiplying taxable income by the statuatory tax rate.

Docket No. E-7 Sub 1276
Amortize deferred environmental Non-ARO costs
For the Test Period Ending December 31, 2021

E1-10
NC5030 Narrative
Application

E1- Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts rate base for the deferred asset resulting from NC Non-ARO environmental costs in service from 2/1/2020 until new rates are effective 1/1/2024.

The impact to amortization expense is determined by dividing the NC Retail asset by the amortization period of 6 years.

The impact to rate base is determined by reducing the asset for one year of amortization and related ADIT.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

[1] NC5030-4 Environmental Non-ARO Plant in Service and Depreciation Expense Detailed Activity - Tranche 2, Line 9
[2] NC5030-4 Environmental Non-ARO Plant in Service and Depreciation Expense Detailed Activity - Tranche 2, Line 19
[3] NC5030-4 Environmental Non-ARO Plant in Service and Depreciation Expense Detailed Activity - Tranche 2, Line 28
[4] NC5030-7 Cost of Service Allocations Factors
[5] NC5030-6 Cost of debt and equity for deferral periods
[6] In Docket No. E-7, Sub 1214, the regulatory asset calculated in NC-1104 - Coal Ash Non ARO Retail Return on Plant, only included additions through 1/31/2020. Tranche 2 includes the impacts of additions 2/1/2020 through 5/31/2020, which was the capital cutoff in the prior case. Interim rates for Docket No. E-7, Sub 1214 were effective 8/24/2020 and included plant in service through 5/31/2020 at current depreciation rates, so deferred return on investment and depreciation expense would stop 8/1/2020.

For the Test Period Ending December 31, 2021

E1-10
NC5040 Narrative
Application

E1-10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts amortization expense and income taxes for the amortization of the deferred asset resulting from NC Grid costs in service 6/1/2020 until new rates are effective 1/1/2024.

The impact to amortization expense is determined by dividing the NC Retail asset by the amortization period of 3 years.

The impact to rate base is determined by reducing the asset for one year of amortization and related ADIT.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

Docket No. E-7 Sub 1276
Amortize Allen Unit 4 unrecovered net book value costs
For the Test Period Ending December 31, 2021

E1-10
NC5060 Narrative
Application

E1-10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts income taxes, depreciation and amortization expense, for the amortization of the retired Allen Unit 4 unrecovered net book value. It also adjusts for the regulatory asset established as a result of the early retirement.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts other O&M, depreciation and amortization, income taxes, working capital and accumulated deferred taxes in the test period for approved regulatory assets and liabilities.

The impact to other O&M, and depreciation and amortization reflects the annualization of new amortizations out of docket E-7 Sub 1214 which began June 1, 2021, and changes to existing amortizations.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

The adjustment to working capital adjusts the balance for the regulatory assets to reflect what the balance will be as of the end of the update period of July 31, 2023.

The adjustment to accumulated deferred taxes adjust the tax effect recorded in the test period for the changes in the regulatory assets.

Adjustments to test year amortizations

Line No.	Description	Test Year Amount	Annualized Amount
1	**General Plant Reserve Adjustment**		
2	0403500 - Depr of General Plant - System	(12,346) [1]	(13,907) [2]
3	The general plant reserve adjustment amortization was updated based on the 2018 Deprecia ion Study,		
4	which was implemented 6/1/2021. This amortization is not included in the NC3010 Annualize depreciation		
5	expense proforma. The rate base balance related to the General Plant Reserve Adjustment is updated		
6	in the NC3030 Post test year additions proforma.		
7			
8	**Amortization of loss on sale of Hydro plants**		
9	0407305 - Regulatory Debits - Hydro	1,257 [3]	1,138 [4]
10	Prior to the ruling in Docket E-7 Sub 1214, the balance was amor izing based on depreciation rates. The		
11	amortization of the loss on hydro sale was updated to an annual amount of $1,138k in Docket E-7 Sub		
12	1214. Amortization at the new rate was implemented on 6/1/2021.		
13			
14	**Non AMI Meters**		
15	North Carolina - 0407115 - Meter Amortization	$ 7,689 [8]	$ 7,903 [9]
16	The final accounting to reclass the net book value of the retired Non AMI Meters out of the asset		
17	accounts into the regulatory asset account occurred in June 2022. Therefore in the test year, the		
18	amortization/depreciation expense related to these meters was partially in depreciation expense and		
19	partially in amortization expense. Since as of the assets were retired prior to the capital cut off, proforma		
20	NC3030 Adjust for Post test year additions, removes the depreciation associated with those retired		
21	meters. This adjustment is to capture the full amortization expense. Amortization began 8/1/2018 and		
22	was to be over 15 years. To calculate annual amortization the adjustment took the NC Retail balance as		
23	of 6/30/2022 and divided it by 133 which is the number of months remaining of the amortization period,		
24	and multiplied that by 12.		
25	June 30, 2022 Balance	$ 87,586	
26	Number of months remaining	133	
27	Monthly Amortization	$ 659	
28	Annual Amortization	$ 7,903	
29			
30	**Amortization of Protected EDIT at ARAM**		
31	0411115 - DFIT: Federal Excess DIT Amortn (NC Retail Customers - ARAM on Protected)	(24,092) [5]	(23,372) [5]
32	In 2021 there was a true up to the 2020 ARAM amortization.		
33			
34	**Amortization of CCR Coal Ash Spend**		
35	0407324 - NC & MW Coal As Amort Exp Amortization of Tranche 2 CCR Coal Ash spend.	19,778 [6]	33,906 [7]
36	Tranche 2 amortization as approved in Docket E-7 Sub 1214 was implemented beginning 6/1/2021.

E1-10
NC5090 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma calculates the COVID deferral amortization expense as of the rates effective date. Also included are adjustments to the test period to normalize late fees after the Governor's order was lifted on August 15, 2022 and O&M expenses to account for ongoing COVID expenses.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

Amortize Customer Connect
For the Test Period Ending December 31, 2021

E1-10
NC5120 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts depreciation and amortization expense associated with the regulatory asset related to Customer Connect. The Company was allowed to accrue a return on the regulatory asset in the same manner that CWIP balances accrue AFUDC through the project in-service date (4/5/2021). As of March 31, 2021, the return accrual ended and amortization over a 15-year period began.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

Docket No. E-7 Sub 1276
Amortize Deferred Billing
For the Test Period Ending December 31, 2021

E1-10
NC5130 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

In the E-7, Sub 1026 Commission Order Granting General Rate Increase, Findings of Fact and Conclusions - Item 40 (page 15), the Commission approved the deferral of the costs to effectuate the lighting audit and billing system change agreed to in paragraph 8.L. of the Stipulation between the Public Staff and the Company. On June 12, 2013, the Public Staff filed a Notice of Settlement in Principle with Duke Energy Carolinas. On June 17, 2013, Duke Energy Carolinas and the Public Staff entered into and filed the Stipulation resolving all of the issues in this proceeding between the two parties. The Stipulation provided that the Company shall conduct an audit and modify its billing system to effectuate the Company's proposed reduction in the extra facilities rate for all customers, including the additional facilities charges for existing lighting customers.

This pro forma adjusts depreciation and amortization expense associated with the regulatory asset related to these costs.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

DUKE ENERGY CAROLINAS, LLC
Docket No. E-7 Sub 1276
Adjust Coal Inventory
For the Test Period Ending December 31, 2021

E1-10
NC6010 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjustment reflects the Company's requirement for a level of coal inventory equal to the coal needed for a 40 day full load burn priced at the projected average delivered coal cost for the fuel billing period as discussed by Witness Verderame in Docket No. E-7, Sub 1263 plus the fixed transportation cost.

Days of coal inventory on the storage piles refers to "full load burn days". Therefore, one "day" of supply is equal to how much coal would be burned at any given generating unit if it was to run at full load for 24 hours straight. The projected full load burn for the entire coal-fired fleet in the Carolinas is 51,746 tons per day which means that if there are 40 days of supply on the system, then there are 2.1 tons (40 * 51,746) on the storage piles.

The Company does not use "average" burn to report how many "days" of inventory are in storage because the average burn for any given period can vary greatly due to many factors and it can over-state the amount of inventory in storage. For example, the biggest risk would be to run out of coal during a hot summer when the entire coal-fired fleet is needed to run at full load. By reporting the inventory using "full load burn", we have stated how many days our units can run during a critical time when they are all expected to be running at full load.

John Verderame Direct Testimony - Docket No. E-7, Sub 1263

Q. WHAT ARE THE PROJECTED COAL AND NATURAL GAS CONSUMPTIONS AND COSTS FOR THE BILLING PERIOD?

A. DEC's current coal burn projection for the billing period is 3.3 million tons, compared to 5.3 million tons consumed during the test period. DEC's billing period projections for coal generation may be impacted due to changes from, but not limited to, the following factors: (1) delivered natural gas prices versus the average delivered cost of coal; (2) volatile power prices; and (3) electric demand. Combining coal and transportation costs, DEC projects average delivered coal costs of approximately $91.89 per ton for the billing period compared to $78.22

OFFICIAL COPY
Mar 01 2022

per ton in the test period. This increase in delivered costs is primarily driven by increased coal commodity costs due to limited coal supply and increased domestic and international demand. This includes an average projected total transportation cost of $29.63 per ton for the billing period, compared to $31.68 per ton in the test period. This projected delivered cost, however, is subject to change based on, but not limited to, the following factors: (1) exposure to market prices and their impact on open coal positions; (2) the amount of Central Appalachian coal DEC is able to purchase and deliver and the non-Central Appalachian coal DEC is able to consume; (3) changes in transportation rates; (4) performance of contract deliveries by suppliers and railroads which may not occur despite DEC's strong contract compliance monitoring process; and (5) potential additional costs associated with suppliers' compliance with legal and statutory changes, the effects of which can be passed on through coal contracts.

DUKE ENERGY CAROLINAS, LLC
Docket No. E-7 Sub 1276
Adjust cash working capital for present revenue annualized and proposed revenue
For the Test Period Ending December 31, 2021

E1-10
NC6020 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts cash working capital to incorporate the impact of the other pro forma adjustments. It also calculates the additional cash working capital required as a result of the proposed increase in rates. The adjustment is in accordance with the Commission's March 21, 2016 order in Docket No. M-100 Sub 137.

Synchronize interest expense with end of period rate base
For the Test Period Ending December 31, 2021

E1-10
NC6030 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro-forma adjusts income taxes to reflect the tax impact that results from annualizing interest expense based on the end-of-period, adjusted rate base.

The impact to income taxes was determined as follows:

First, multiply rate base after all pro-forma adjustments have been made by the long-term debt ratio to calculate an adjusted long-term debt balance. Second, multiply the adjusted long-term debt balance by the end of year cost of long-term debt to calculate annualized interest expense. Third, subtract interest expense incurred during the test period from annualized interest expense and multiply the difference by the statutory tax rate.

Docket No. E-7, SUB 1276
NC6040 Adjust NC Franchise Tax
For the Test Period Ending December 31, 2021

E1-10
NC6040 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

On November 18, 2021 Governor Roy Cooper signed into law the 2021 Appropriations Act which affects various North Carolina Taxes including franchise taxes.

The Act simplifies the franchise tax calculation. Effective with the 2022 income tax returns filed in 2023, franchise tax will be calculated on a corporation's North Carolina apportioned net worth. This change will result in a reduction in the Company's Franchise tax expense. This proforma, adjusts franchise tax to the anticipated new level under the new law.

NC6090 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This proforma reflects an adjustment to rate base to reflect flowing back additional Unprotected EDIT to customers using a levelized EDIT Rider consistent with what was done in Docket E-7 Sub 1214. The amounts are offsets to rate base as of the end of the test year. With levelized give back, the amounts should not be included in rate base.

This proforma reflects an adjustment to rate base for the additional Unprotected EDIT. The company is proposing to flow these additional amounts back to customers through the exisitng levelized EDIT rider as shown in Bowman Exhibit 3.

Normalize for Storm Costs
For the Test Period Ending December 31, 2021

E1-10
NC7010 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts operation and maintenance expenses and income taxes in the test period to normalize for storm costs.

The impact to operation and maintenance expense is determined by calculating an inflated average level of storm costs experienced by the Company over the last ten years and then subtracting storm restoration costs incurred during the test period to adjust for a normalized amount of costs.

For the Test Period Ending December 31, 2021

E1-10
NC7040 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma calculates the amortization expense and impacts to rate base related to the Servicing and Administration fee overcollection and the Upfront bond issuance costs overcollection as a result of the NC Storm Securitization docket.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

Revenue Annualization
For the Test Period Ending December 31, 2021

E1-10
NC1010 Narrative
Third Supplemental

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma represents the additional North Carolina retail revenues, uncollectible expense, and regulatory fees required to reflect the annualization of rates in effect on January 6, 2023. Fuel is neutralized in the case through this adjustment and the fuel pro forma adjustment.

The impact to O&M expenses for uncollectible expense and the NCUC fee is determined by multiplying the impact to revenue by the uncollectible rate and the NCUC assessment rate.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

(D) 3rd Supplemental Update
Updated for the new NCUC Regulatory Fee of .1475% in effect as of July 1, 2023

Docket M-100 Sub 142

STATE OF NORTH CAROLINA
UTILITIES COMMISSION
RALEIGH

DOCKET NO. M-100, SUB 142

At present, the Commission's regulatory fee for noncompetitive jurisdictional revenues is 0.14%. Pursuant to N.C.G.S. § 62-302(b)(3), the Commission has reviewed the estimated cost of operating the Commission and the Public Staff for the next fiscal year, including the reserve margin permitted under N.C.G.S. § 62-302(a), and has determined that the regulatory fee for noncompetitive jurisdictional revenues should be increased to 0.1475%, effective July 1, 2023.

IT IS, THEREFORE, ORDERED as follows:

1. That the regulatory fee for noncompetitive jurisdictional revenues shall be, and is hereby, set at 0.1475%, effective July 1, 2023; and

2. That the Chief Clerk shall serve this Order on all utilities regulated by the Commission.

ISSUED BY ORDER OF THE COMMISSION.

This the 30th day of June, 2023.

NORTH CAROLINA UTILITIES COMMISSION

NC1020 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This adjustment to revenue reflects the elimination of the estimated unbilled revenue the Company recorded for the difference between kWh sales billed during the test period and kWh used by customers during the test period.

The impact to income taxes was determined by multiplying taxable income by the statutory tax rate.

For the Test Period Ending December 31, 2021

E1-10
NC1030 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma reflects adjustments to revenue, O&M, general taxes and income taxes to update various other revenues.

These fees are recoded in miscellaneous revenue accounts. The impact to revenue for fees is determined by multiplying the number of units for NC in the test period by the current rate to arrive at current revenues. The test period units are then multiplied by the proposed rate to arrive at the proposed revenue. The difference between the current and proposed other revenues is the adjustment amount.

The impact to O&M for the NCUC Regulatory fee and uncollectibles is determined by multiplying the impact to revenue by the assessment rates.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

Customer Growth
For the Test Period Ending December 31, 2021

E1-10
NC1040 Narrative
Partial Settlement

E-1 Item 10 Adjustments Requirement
Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment
This pro forma annualizes revenue, fuel expense, operation and maintenance expense, and income taxes to reflect changes in the number of customers and usage per customer during the test period.

The impact to revenue was determined as follows:

To determine the additional revenue requirement resulting from customer growth, the monthly increase in number of customers was multiplied by the applicable average monthly kWh consumption per customer to derive the annualized change in kWh consumption based on the number of customers at the end of the test period.

The impact to fuel expense was determined by multiplying the 'Customer growth adjustment to KWH sales - NC kWh adjustment' by the most recent approved fuel rate (excluding EMF).

The impact to other operation and maintenance expense is determined by:

Variable O&M Adjustment - adjusts energy related O&M for the change in KWH due to the change in growth and usage per customer.

The Per Bill Adjustment - adjust O&M for the change in variable cost due to the change in number of bills to be generated.

Regulatory Fee - multiplying the impact to revenue by the statutory regulatory fee percentage rate and the uncollectibles rate.

The impact to income taxes was determined by multiplying taxable income by the statutory tax rate.

This adjustment updates revenues to reflect customer growth experienced beyond the test period, through July 2023.

(A) December Update
Updated for actual customer growth and change in usage through December 2022

(B) 1st Supplemental Update
Updated for actual customer growth and change in usage through April 2023

(C) 2nd Supplemental Update
Updated for actual customer growth and change in usage through May 2023

(D) 3rd Supplemental Update
Updated for actual customer growth and change in usage through June 2023

Notes:
Two approved methods are used for estimating the growth adjustment depending on the class/schedule

"Regression" refers to the use of Ordinary Least Squares Regression
"Customer" refers to the use of the Customer by Customer approach

Weather Normalization
For the Test Period Ending December 31, 2021

E1-10
NC1050 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma reflects adjustments to revenue, fuel expense, operation and maintenance expense, and income taxes to normalize weather conditions experienced during the test period.

The impact to revenue is determined as follows:
1. The percentage of NC Retail kWh sales for the test period is calculated by dividing NC Retail kWh sales by Retail kWh sales.

2. The NC Retail kWh weather adjustment for the test period is determined by multiplying the percentage of NC Retail kWh sales by the Retail kWh weather adjustment. This Retail kWh weather adjustment is calculated by determining the effect that temperature variances have on kWh sales and then pricing out that change in kWh sales for each customer class during the test period at the rates in effect during the test period.

The weather normals used in deriving the temperature corrections for the year 2021 reflect a 30 year average of heating and cooling degree days/hours based on the years 1990-2020. The derivations of the individual monthly weather normals start with calculating the simple average of the hourly temperatures from the following three weather stations:

A. Charlotte Douglas International Airport
B. Greensboro Piedmont Triad Airport
C. Greer Greenville - Spartanburg Airport

Next, degree hours are calculated by taking the average daily temperatures and subtracting them from a base (65 degrees Fahrenheit for CDD's and 65 degrees Fahrenheit for HDD's). The resulting CDD's and HDD's are summed for each day to determine the daily heating or cooling degree hours over the billing period.

3. The average price by class for the test period is calculated by dividing NC Retail present revenues annualized (dollars in thousands) by NC Retail kWh sales.

4. The weather adjusted revenue for the test period is calculated by multiplying the NC Retail kWh weather adjustment by the average price by class.

The impact to fuel expense is determined by multiplying the NC Retail kWh weather adjustment by the most recent approved fuel rate.

The impact to other operation and maintenance expense is determined by multiplying the impact to revenue by the statutory regulatory fee percentage rate and the uncollectibles rate.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

DUKE ENERGY CAROLINAS, LLC
Docket No. E-7 Sub 1276
Update fuel costs to approved rates
For the Test Period Ending December 31, 2021

E1-10
NC2010 Narrative
Second Supplemental

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts fuel expense, purchased power, other operation and maintenance expense and income taxes for fuel clause expense during the test period to match the fuel clause revenues derived from the fuel factor approved by the Commission in Docket No. E-7, Sub 1263. By matching the expenses to the revenue, this adjustment ensures that no increase is requested in this proceeding related to fuel and fuel-related expenses that are recoverable through the fuel clause.

The impact to fuel and fuel related expenses is determined as follows:
1. The total fuel clause expense (including fuel, purchased power and reagents & by-products) allocated in cost of service is eliminated from the test period.

2. The pro forma fuel clause expense is calculated by multiplying the NC Retail kWh sales for the test period by the most recent approved fuel rate.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

(B) 1st Supplemental Update
Updated for a formula error in the original application

(C) 2nd Supplemental Update
Incorporated acct. #0456700 - Steam Sales Revenue into by-products (it is part of fuel clause)

NC2020 - Adjust Purchase Power DEC
For the Test Period Ending December 31, 2021

E1-10
NC2020 Narrative
Supplemental

E-1 Item 10 Adjustments Requirement
Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment
This adjustment is to reflect the impacts of the Stipulation Regarding the Proper Methodology for Determining the Fuel Costs Associated with Power Purchases from Power Marketers and Others reached with DEC, Duke Energy Progress, LLC and the Public Staff in Docket E-7 Sub 1282. During the test year, 39% of purchased power energy costs were estimated to be non-fuel expense and appropriate for cost recovery through base rates. Based on the Stipulation, during the test year, 15% of energy costs on these power purchases is the appropriate percentage to be deemed as non-fuel costs and appropriate for cost recovery through base rates.

(B) 1st Supplemental Update
New proforma to reflect the impacts of the Stipulation Regarding the Proper Methodology for Determining the Fuel Costs Associated with Power Purchases from Power Marketers and Others reach with DEC, DEP, and the Public Staff in Docket E-7 Sub 1282

Docket No. E-7, SUB 1276
Adjust for Costs Recovered through Non Fuel Riders
For the Test Period Ending December 31, 2021

E1-10
NC2030 Narrative
Third Supplemental

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This proforma adjusts revenues and expenses to remove amounts that are associated with cost recovery through non-fuel riders. Rate base is also adjusted to eliminate the amounts recorded on the Company's financial statements as of December 31, 2021 related to the riders as outlined on NC2030-1.

(B) 1st Supplemental Update
CPRE Updates:
Added Gaston & Maiden Creek transmission plant (see PSDR 21)
Updated network upgrade costs for Sugar and Stanly and included in transmission plant

(D) 3rd Supplemental Update
Undid change to move CPRE distribution plant to transmission plant. Intent of this proforma is to zero out impact of nonfuel riders in cost of service. Since those were included in distribution in cost of service, need to remain there to offset it correctly.

Updated allocation factors for Gaston and Maiden Creek transmission plant. In cost of service those are treated as Generator Step-up Units (GSUs) and receive production plant allocation factor rather than transmission plant allocation factor.

DUKE ENERGY CAROLINAS, LLC
Docket No. E-7 Sub 1276
Adjust O&M for executive compensation
For the Test Period Ending December 31, 2021

E1-10
NC2040 Narrative
Partial Settlement

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro-forma adjusts operation and maintenance expense and income taxes for officers' compensation to eliminate a portion of the salary for the top 5 executives.

The impact to operation and maintenance expense is determined as follows:

Eliminate 50% of the compensation of the Chief Executive Officer (CEO), Chief Financial Officer (CFO), Chief Operating Officer (COO), Chief Legal Officer (CLO), and Duke Energy Carolinas Executive Vice President and Chief Executive Officer (CEO) allocated to Duke Energy Carolinas in the test period.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

(B) 1st Supplemental Update

Proforma was revised to reflect updated amounts for the short term incentive portion of executive compensation for the top 5 executives.

(S3) Settlement

Adjusted to include Executive benefits per the settlement agreement

Docket No. E-7 Sub 1276
Normalize O&M Labor Expenses
For the Test Period Ending December 31, 2021

E1-10
NC2050 Narrative
Partial Settlement

E-1 Item 10 Adjustments Requirement
Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment
This pro-forma adjusts operation and maintenance expense, general taxes and income taxes to normalize operation and maintenance labor costs.

The impact to operation and maintenance expense is determined as follows:
1. The impact to Salaries and Wages was calculated by comparing the annual test period salaries and wages to the salaries and wages as of 7/1/2022 per Human Resources.

2. The percentage of electric operation and maintenance expense to apply to the salaries and wages adjustment is calculated as follows: total operation and maintenance labor per Form 1, Page 354 less reimbursement of Catawba Joint Owners is divided by total salaries and wages excluding other work in progress and allocation of clearing accounts per Form 1, Page 355. The adjustment calculated in Step 1 is multiplied by this percentage.

3. The impact related to fringe benefit costs is calculated by multiplying the salaries and wage adjustment calculated in Step 1 by the fringe benefits contribution rate. The fringe benefits contribution rate is calculated by dividing account 926 - employee pensions and benefits booked during the test period by total operation and maintenance labor per Form 1, Page 354.

4. The impact to operation and maintenance expense also reflects an adjustment to restate variable short and long term pay booked during the test period to target.

The impact to general taxes reflects the change in the FICA tax base. To adjust general taxes, the salaries and wages adjustment calculated in Step 1 is multiplied by the percentage of wages subject to OASDI by the OASDI tax rate for employers. Next, the adjustment due to Medicare tax is calculated by multiplying the salaries and wages adjustment calculated in Step 1 by the Medicare tax rate.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

(A) December Update
Updated annualized labor actuals through December 2022.

(B) 1st Supplemental Update
Updated annualized labor actuals through April 2023.

(C) 2nd Supplemental Update

Fact Sheet

SOCIAL SECURITY

2022 SOCIAL SECURITY CHANGES

Cost-of-Living Adjustment (COLA):

Based on the increase in the Consumer Price Index (CPI-W) from the third quarter of 2020 through the third quarter of 2021, Social Security and Supplemental Security Income (SSI) beneficiaries will receive a 5.9 percent COLA for 2022. Other important 2022 Social Security information is as follows:

Tax Rate	2021	2022
Employee	7.65%	7.65%
Self-Employed	15.30%	15.30%

NOTE: The 7.65% tax rate is the combined rate for Social Security and Medicare. The Social Security portion (OASDI) is 6.20% on earnings up to the applicable taxable maximum amount (see below). The Medicare portion (HI) is 1.45% on all earnings. Also, as of January 2013, individuals with earned income of more than $200,000 ($250,000 for married couples filing jointly) pay an additional 0.9 percent in Medicare taxes. The tax rates shown above do not include the 0.9 percent.

Docket No. E-7 Sub 1276
Update Benefit Costs
For the Test Period Ending December 31, 2021

E1-10
NC2060 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This proforma adjusts operation and maintenance expense and income taxes for changes in benefits costs.

The impact to operation and maintenance expense reflects the annual level of pension, OPEB, Active Medical, FAS112 and non-qualified pension benefits based on a report from the Company's third party consultant less actual amounts in the test period for these expenses.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

Adjust vegetation management expenses
For the Test Period Ending December 31, 2021

E1-10
NC2070 Narrative
Second Supplemental

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts operation and maintenance expenses and income taxes for increased vegetation management expenses not included in the test period. The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

(C) 2nd Supplemental Update
Updated 2021 Transmission Herbicide spend as noted in PSDR 143-5

Docket No. E-7, SUB 1276
Adjust test year expenses
For the Test Period Ending December 31, 2021

E1-10
NC2080 Narrative
Partial Settlement

E-1 Item 10 Adjustments Requirement
Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts operation and maintenance expenses and income taxes in the test period to proactively adjust for mischarges as a result of human error in coding Company expenses as well as agreed upon adjustments.

The Company also made an adjustment to test year labor for lobbying expenses charged above the line prior to the issuance of new NCUC guidance on lobbying in Q3 of 2021.

(B) 1st Supplemental Update
Updates made to address the following:
1) Adjustment to end of period rate base for M&S inventory to reflect accounting corrections posted after the end of the test period.
2) Adjustment to include TCA Stipulation

(S3) Settlement
Adjustment to Extra Facilities Revenue
Removed lobbying and Board of Directors expenses
Removed sponsorship and donation expenses
Adjustment for M&S inventory for Lee Unit 3
Removed or adjusted Plant as agreed to in settlement
Removed $50M system plant and associated depreciation expense for DE Plaza

Docket No. E-7 Sub 1276
Adjust Aviation Expense
For the Test Period Ending December 31, 2021

E1-10
NC2090 Narrative
Partial Settlement

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts operation and maintenance expense, general taxes and income taxes for aviation expenses to be excluded from the test period.

The corporate aviation operation and maintenance, depreciation, and return expense booked during the test period is multiplied by the percentage of corporate aviation expense to be excluded from test period expense. Fifty percent is being excluded.

The impact to general taxes is determined by multiplying corporate aviation general taxes booked during the test period by the percentage of corporate aviation expense to be excluded from test period expense.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

(S3) Settlement

Removed commercial international flights as part of settlement agreement.

DUKE ENERGY CAROLINAS, LLC
Docket No. E-7 Sub 1276
Levelize Nuclear Refueling Outage Costs
For the Test Period Ending December 31, 2021

E1-10
NC2100 Narrative
Third Supplemental

E-1 Item 10 Adjustments Requirement
Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment
This pro forma adjusts operation and maintenance expenses and income taxes to levelize nuclear refueling outage costs.

The impact to operation and maintenance expenses was determined by subtracting annualized outage amortization expense from test period outage expense.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

(A) December Update
Updated amortization amounts for those that had changes to the last known and measurable period. For this update, that included McGuire Unit 1 and Oconee Unit 3.

(B) 1st Supplemental Update
Updated amortization amounts for those that had changes to the last known and measurable period. In addition to the December update, for this update that included Oconee Unit 1 and Catawba Unit 2.

(C) 2nd Supplemental Update
No changes, as there were no updated amortization amounts since the last supplemental update.

(D) 3rd Supplemental Update
Updated amortization amounts for those that had changes to the last known and measurable period. For this update that included McGuire Unit 2.

Docket No. E-7, SUB 1276
Annualize non labor O&M
For the Test Period Ending December 31, 2021

E1-10
NC2110 Narrative
Partial Settlement

E-1 Item 10 Adjustments Requirement
Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro-forma annualizes test period operation and maintenance expenses excluding fuel, purchased power, and labor and benefit costs to reflect the change in unit costs that occurred during the test period.

The impact to operation and maintenance expenses is determined as follows:

Starting with per book operation and maintenance expense, excluding fuel and purchased power, as stated on Bowman Exhibit 2 page 1 and subtracting all pro-forma adjustments that adjust the test period amount.

Next, subtract the salaries and wages and fringe benefits from operation and maintenance expenses.

Finally, the impact to operation and maintenance expense is calculated by multiplying total adjusted non-labor operation and maintenance expenses by the average inflation rate.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

(A) December Update
Updated to reflect the latest inflation rates (through December 2022) on tabs 2110-3, 2110-4, 2110-5).

(B) 1st Supplemental Update
Updated Reagents line item to pull in number from NC2010 and to reflect the appropriate allocation factor (PSDR 75)

Updated to reflect the latest inflation rates (through April 2023) on tabs 2110-3, 2110-4, 2110-5).

(C) 2nd Supplemental Update

Updated to reflect the latest inflation rates (through May 2023) on tabs 2110-3, 2110-4, 2110-5).

(D) 3rd Supplemental Update
Updated to reflect the latest inflation rates (through June 2023) on tabs 2110-3, 2110-4, 2110-5).

[S3] Settlement
Impacted by changes in NC2080 Test year expenses and NC2090 Adjust Aviation

DUKE ENERGY CAROLINAS, LLC
Docket No. E-7 Sub 1276
Adjust reserve for end of life nuclear costs
For the Test Period Ending December 31, 2021

E1-10
NC2120 Narrative
Partial Settlement

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

Nuclear Fuel

The cost of the last nuclear fuel core is not captured in the costs of decommissioning and is not expected to have any salvage value. As this last core of nuclear fuel would benefit the ratepayers served prior to the end of life of the nuclear plant, a reserve is accrued so that there is a better matching of cost and benefit for ratemaking purposes. The annual amortization expense adjustment is determined by dividing the current projected remaining value of the last core of nuclear fuel at the end of life of each unit by the number of years remaining in the unit's life less the amount of amortization in the test year. The reserve is an offset to rate base in the cost of service.

Nuclear Materials and Supplies

Similar to the discussion above for the final nuclear fuel core, the Company accrues a reserve for end of life nuclear materials and supplies (M&S). The nuclear M&S inventory will have little or no salvage value at the time of decommissioning. The annual amortization expense adjustment was determined by dividing the projected inventory balance at the end of life of each unit by the number of years remaining in the unit's life less the amount of amortization in the test year. Duke Energy Carolinas assumed in its computations that the current test year balance of nuclear M&S would be the projected inventory balance at the end of life of each unit.

[S3] Settlement

Adjusted M&S inventory based on settlement for 5% salvage.

Docket No. E-7 Sub 1276
Adjust O&M for change in NCUC regulatory fee
For the Test Period Ending December 31, 2021

E1-10
NC2130 Narrative
Third Supplemental

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts other operation and maintenance expense for the impact of the change in the NCUC fee since the last rate case.

The impact to operation and maintenance expense is determined as follows:

The regulatory fee expense was recalculated using the base revenues subject to regulatory fee in the test period times the new rate of 0.0014 effective July 1, 2022.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

(D) 3rd Supplemental Update
Updated for the new NCUC Regulatory Fee of .1475% in effect as of July 1, 2023

Notification of revised NCUC regulatory reporting fee [1]

STATE OF NORTH CAROLINA
UTILITIES COMMISSION
RALEIGH

DOCKET NO. M-100, SUB 142

At present, the Commission's regulatory fee for noncompetitive jurisdictional revenues is 0.14%. Pursuant to N.C.G.S. § 62-302(b)(3), the Commission has reviewed the estimated cost of operating the Commission and the Public Staff for the next fiscal year, including the reserve margin permitted under N.C.G.S. § 62-302(a), and has determined that the regulatory fee for noncompetitive jurisdictional revenues should be increased to 0.1475%, effective July 1, 2023.

IT IS, THEREFORE, ORDERED as follows:

1. That the regulatory fee for noncompetitive jurisdictional revenues shall be, and is hereby, set at 0.1475%, effective July 1, 2023; and

2. That the Chief Clerk shall serve this Order on all utilities regulated by the Commission.

ISSUED BY ORDER OF THE COMMISSION.

This the 30th day of June, 2023.

NORTH CAROLINA UTILITIES COMMISSION

A. Shonta Dunston

A. Shonta Dunston, Chief Clerk

Adjust for non-residential credit card fees
For the Test Period Ending December 31, 2021

E1-10
NC2140 Narrative
Partial Settlement

E-1 Item 10 Adjustments Requirement
Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment
This pro forma adjusts operation and maintenance expenses for non-residential credit card fees costs by using 2021 transactions and applying a unit cost per transaction.

(D) 3rd Supplemental Update
Updated transactions to align with more detailed analysis performed as part of PSDR 30-2

[S3] Settlement
Removed this request per the settlement agreement

Docket No. E-7 Sub 1276
Adjust test year rent expense for Duke Energy Plaza
For the Test Period Ending December 31, 2021

E1-10
NC2150 Narrative
Partial Settlement

E-1 Item 10 Adjustments Requirement
Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts operating revenue, operation and maintenance expenses, depreciation expense, income taxes, electric plant in service, accumulated depreciation, working capital and accumulated deferred income taxes in the test period to adjust revenues, expenses and rate base based on the changes in the Charlotte real estate portfolio due to the new Duke Energy Plaza building.

December updates:
Updated the F. Facility Study workpaper to remove the estimated artwork costs from the cost of the building, which impacted NC2150-2 Rent Revenue and NC2150-3 Rent Expense for DE Plaza. Also removed a small amount of O&M allocated from DEBS in the test period related to the artwork on NC2150-1 Calculation.

Supplemental updates:
Updated the F. Facility Study workpaper to only include projected in service costs as of June 30, 2023, which impacted NC2150-2 Rent Revenue and NC2150-3 Rent Expense for DE Plaza.

Updated the F. Facility Study workpaper for updated insurance rate estimate per DR 85-25, which impacted NC2150-2 Rent Revenue and NC2150-3 Rent Expense for DE Plaza. In addition, updated NC2150-5 Property Insurance estimate based on how insurance is charged in the Test Period and Ongoing.

Updated F. Facility Study workpaper to include actual in-service costs as of June 30, 2023, which impacts the NC2150-2 Rent Revenue and NC2150-3 Rent Expense for DE Plaza.

Also removed entries to remove the asset impacts

[S3] Updated to flow through impact of settlement reduction of $50M system plant ($40M base case)

DUKE ENERGY CAROLINAS, LLC
Docket No. E-7 Sub 1276
Adjust O&M for Reliability Assurance
For the Test Period Ending December 31, 2021

E1-10
NC2160 Narrative
Partial Settlement

E-1 Item 10 Adjustments Requirement
Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This proforma adjusts operation expense and income taxes for incremental O&M projects reliability assurance to guard against future impacts of severe weather events. The expense adjustment reflects a 3 year average expense level from 2023-2025 compared to the test year expense level.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

(B) 1st Supplemental Update
New proforma to adjust operation expense and income taxes for incremental O&M projects reliability assurance to guard against future impacts of severe weather events.

(S3) Settlement
Adjusted O&M for reliability assurance based on settlement.

DUKE ENERGY CAROLINAS, LLC
Docket No. E-7 Sub 1276
Annualize Depreciation on year end plant balances
For the Test Period Ending December 31, 2021

E1-10
NC3010 Narrative
Third Supplemental

E1-10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro-forma annualizes depreciation expense, income taxes, and amortization of investment tax credit to reflect a full year's level of depreciation on plant in service as of the end of the test period.

The impact to depreciation expense is determined by multiplying current depreciation rates times the level of plant in service as of the end of the test period and then subtracting actual depreciation expense booked during the test period.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

The impact to amortization of investment tax credit reflects the difference between actual amortization booked during the test period and the new annual level of amortization based on the new depreciation study.

(B) 1st Supplemental Update
Corrected calculation of distribution rate on tab NC3010-2, line 49

(B) 3rd Supplemental Update
This adjustment has been updated to remove transmission and distribution securitized assets related to storms.

[1] Total Plant-in Service excludes Non-Depreciable Assets and the Capitalized Asset Retirement Costs related to FAS 143.
[2] Fossil land rights, along with some Intangible and Hydro assets are fully depreciated/amortized and no longer accrue any expense.
[3] The TEP credit is due to an impairment recorded as part of the Progress Merger.
[4] The per book intangible amount reflects a representative level of amortization expense on a go forward basis.
[5]Depreciation expense on vehicles and construction equipment is recorded to 803 accounts, therefore it is excluded above.
[6] The calculated accrual column above assumes 12 months of depreciation. If any assets were added during the 12 month period, depreciation would be calculated based on the in-service date in the actual 12me depr booked column above.
[7] Sum of L32, L43, L58, L75, L84
[8] Sum of L35, L46, L60, L77, L86

Annualize Property Tax on Test Year Plant Additions
For the Test Period Ending December 31, 2021

E1-10
NC3020 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro-forma annualizes general taxes and income taxes to reflect an annual level of expense for property taxes based on the end of the test period level of plant investment.

The impact to general taxes is determined by calculating an annual level of property tax expense equal to estimated annualized property tax less property taxes booked during the test period.

The impact to income taxes was determined by multiplying taxable income by the tax rate.

Docket No. E-7 Sub 1276
Adjust for post test year additions to plant in service
For the Test Period Ending December 31, 2021

E1-10
NC3030 Narrative
Partial Settlement

E-1 Item 10 Adjustments Requirement
Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment
This pro forma adjusts depreciation expense, general taxes, income taxes, electric plant in service, and accumulated depreciation to reflect net additions to plant in service.

The impact to operating income is determined as follows:
The adjustment to depreciation expense reflects a full year's level of depreciation on net additions to plant in service by multiplying the projected additions to net electric plant by depreciation rates based on the new depreciation study.

The adjustment to general taxes reflects estimated annual property tax expense related to the net additions to plant in service. Property taxes are estimated by multiplying the projected net additions to electric plant by a combined North Carolina and South Carolina property tax rate.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

The impact to rate base is determined as follows:
The adjustment to electric plant in service reflects projected updates to electric plant in service through June 2023.
The adjustment to accumulated depreciation reflects projected updates to the accumulated depreciation balance through June 2023 and annualized depreciation expense based on forecasted June 2023 electric plant in service balances.

(B) 1st Supplemental Update
Updated for actuals through April 2023 and for updated cutoff date of June 30, 2023.
Removed DE Plaza artwork and video wall.

(C) 2nd Supplemental Update
Updated for actuals through May 2023

(D) 3rd Supplemental Update
Updated for actuals through June 2023

(S3) Settlement
Estimated revised rate with other production interim net salvage change

[1] NC3030-2 Net Plant Adds
[2] NC3040-2 Comparison of Current and Proposed Depreciation as of December 31, 2021 - column d
[3] NC3030-3 Accumulated Depreciation
[4] NC3030-4 Accumulated Depreciation Annualization Adjustment
[5] Allocation Factor - All Production Demand
[6] Allocation Factor - All Transmission Demand
[7] Allocation Factor - All - Dist Plant - DEC
[8] Allocation Factor - All - General Plant - Jur
[9] Allocation Factor - All - Intangible Plant - Jur
[10] NC3020-1 Annualize Property Tax on Test Year Plant Additions - Line 17
[11] NC1010-4 2022 Calculation of Tax Rates, Line 10
[12] Per DEC 2021 Depreciation Study notes: Assets in Account 390.10 (Structures and Improvements - Duke Energy Plaza) will use an Accrual Rate of 1.85% based on a 100-S1 Survivor Curve, negative 5% Net Salvage and a 60-year Lifespan
[13] Updated annualized depreciation on intangible additions per Asset Accounting.
[14] Removing the Lee plant in service balance as of 12/31/2021 per the 2021 Depreciation Study. Per the settlement the steam composite excludes Lee, therefore the retirement activity shouldn't have an impact on depreciation expense in this proforma.

[1] Total Plant-in Service excludes Non-Depreciable Assets and the Capitalized Asset Retirement Costs related to FAS 143.
[2] Fossil land rights, along with some Intangible and Hydro assets are fully depreciated/amortized and no longer accrue any expense.
[3] The TEP credit is due to an impairment recorded as part of the Progress Merger.
[4] The per book intangible amount reflects a representative level of amortization expense on a go forward basis.
[5]Depreciation expense on vehicles and construction equipment is recorded to 803 accounts, therefore it is excluded above.
[6] The calculated accrual column above assumes 12 months of depreciation. If any assets were added during the 12 month period, depreciation would be calculated based on the in-service date in the actual 12me depr booked column above.
[7] Forecasted Contra AFUDC balances are not available, these lines will be updated with June 30, 2023 actuals.

DUKE ENERGY CAROLINAS, LLC
Docket No. E-7 Sub 1276
Adjust Depreciation for New Depreciation Rates
For the Test Period Ending December 31, 2021

E1-10
NC3040 Narrative
Partial Settlement

E-1 Item 10 Adjustments Requirement
Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment
This pro forma adjusts depreciation expense to reflect the updated depreciation rates resulting from a new depreciation study. Additionally this proforma is deferring 50% of the NC Retail annual impact of accelerating steam plant lives in the new depreciation study.

The impact to rate base is adjusting accumulated depreciation to reflect the updated depreciation rates resulting from a new depreciation study, creating a regulatory asset for one year of deferral and related ADIT.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

(B) 1st Supplemental Update
Corrected calculation of distribution rate shown on tab NC3040-2, line 8. No dollar impact to this proforma.

(D) 3rd Supplemental Update
Updated for updated depreciation study

(S3) Settlement
Agreed to 75% deferral for Sub Critical Steam depreciation
Estimated revised rate with other production interim net salvage change
Added in an estimate for decrease in production dismantlment costs

Docket No. E-7 Sub 1276
Adjust for Transmission Merger Mitigation Project
For the Test Period Ending December 31, 2021

E1-10
NC3070 Narrative
Third Supplemental

E1-10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts income taxes, depreciation and amortization expense, electric plant in service and accumulated depreciation to remove the impact of the Progress merger costs included in other proformas.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

(B) 1st Supplemental Update
Updated with actuals through April 2023 and for the change in cutoff to June 30, 2023.

(C) 2nd Supplemental Update
Updated with actuals through May 2023.

(D) 3rd Supplemental Update
Updated with actuals through June 2023.

Docket No. E-7 Sub 1276
Amortized Deferred Environmental ARO Costs
For the Test Period Ending December 31, 2021

E1-10
NC4010 Narrative
Third Supplemental

E-1 Item 10 Adjustments Requirement
Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment
This pro-forma adjusts amortization expense, income taxes and rate base for the amortization of deferred environmental costs related to the removal of coal ash.

The impact to depreciation expense reflects a 5 year amortization of deferred costs to remove coal ash costs. The balance of the deferral is projected through December 31, 2023 and includes a return during the deferral period.

The impact to Rate Base includes the additional deferred costs through December 31, 2022 and additional ADIT on the deferred balance change.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

(A) December Update
Updated with actuals through December 2022.

(B) 1st Supplemental Update
Updated with actuals through April 2023

(C) 2nd Supplemental Update
Updated with actuals through May 2023 and changed cut off to June 2023

(D) 3rd Supplemental Update
Updated with actuals through June 2023

For the Test Period Ending December 31, 2021

E1-10
NC5010 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

The impact to other O&M, and depreciation and amortization reflects the elimination of test year costs for regulatory assets that will be fully amortized before the anticipated rates effective date of January 1, 2024.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

The adjustment to working capital eliminates the expiring regulatory assets balances as of 12/31/2021.

The adjustment to accumulated deferred taxes adjusts the tax effect recorded in the test period for the changes in the regulatory assets.

Docket No. E-7 Sub 1276
Amortize Rate Case Costs
For the Test Period Ending December 31, 2021

E1-10
NC5020 Narrative
Third Supplemental

E-1 Item 10 Adjustments Requirement
Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment
This proforma adjusts operation and maintenance expense and income taxes for the amortization of rate case costs for Docket No. E-7, Sub 1214 and for Docket E-7, Sub 1276.

The rate case costs requested for recovery are offset by applying over-amortization of severance to reduce the balance.

Rate case costs associated with Docket E-7 Sub 1276 include actual costs incurred through September 2022 and a projection of costs through rates effective date.

The impact to income taxes is determined by multiplying taxable income by the statuatory tax rate.

(B) 1st Supplemental Update
Updated actuals through April 2023

(C) 2nd Supplemental Update
Updated actuals through May 2023
Updated to include over amortizations

(D) 3rd Supplemental Update
Updated actuals through June 2023
Updated projection.

Docket No. E-7 Sub 1276
Amortize deferred environmental Non-ARO costs
For the Test Period Ending December 31, 2021

E1-10
NC5030 Narrative
Third Supplemental

E1- Item 10 Adjustments Requirement
Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment
This pro forma adjusts rate base for the deferred asset resulting from NC Non-ARO environmental costs in service from 2/1/2020 until new rates are effective 1/1/2024.

The impact to amortization expense is determined by dividing the NC Retail asset by the amortization period of 6 years.

The impact to rate base is determined by reducing the asset for one year of amortization and related ADIT.
The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

(B) 1st Supplemental Update
Updated to reflect actuals through April 2023.

(C) 2nd Supplemental Update
Updated to reflect actuals through May 2023.

(D) 3rd Supplemental Update
Updated to reflect actuals through June 2023.

[2] NC5030-4 Environmental Non-ARO Plant in Service and Depreciation Expense Detailed Activity - Tranche 2, Line 19
[3] NC5030-4 Environmental Non-ARO Plant in Service and Depreciation Expense Detailed Activity - Tranche 2, Line 28
[4] NC5030-7 Cost of Service Allocations Factors
[5] NC5030-6 Cost of debt and equity for deferral periods
[6] In Docket No. E-7, Sub 1214, the regulatory asset calculated in NC-1104 - Coal Ash Non ARO Retail Return on Plant, only included additions through 1/31/2020. Tranche 2 includes the impacts of additions 2/1/2020 through 5/31/2020, which was the capital cutoff in the prior case. Interim rates for Docket No. E-7, Sub 1214 were effective 8/24/2020 and included plant in service through 5/31/2020 at current depreciation rates, so deferred return on investment and depreciation expense would stop 8/1/2020.

NC5040 Narrative
Partial Settlement

E1-10 Adjustments Requirement
Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment
This pro forma adjusts amortization expense and income taxes for the amortization of the deferred asset resulting from NC Grid costs in service 6/1/2020 until new rates are effective 1/1/2024.

The impact to amortization expense is determined by dividing the NC Retail asset by the amortization period of 3 years.

The impact to rate base is determined by reducing the asset for one year of amortization and related ADIT.
The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

(A) December Update
Updated tabs NC5040-3 Plant Detail and NC5040-4 OM Detail with actuals through December 2022. Also updated tab NC5040-4 OM Detail to add in the 2018 installation O&M included in Docket E-7 Sub 1214 as an annual threshold to defer the incremental installation O&M over the test year level once rates went into effective June 1, 2021.

(B) 1st Supplemental Update
No additional updates were made

[S3] Settlement
Agreed to 100% debt and no equity return and an 18 year amortization period.

Docket No. E-7 Sub 1276
Amortize Allen Unit 4 unrecovered net book value costs
For the Test Period Ending December 31, 2021

E1-10
NC5060 Narrative
Partial Settlement

E1-10 Adjustments Requirement
Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment
This pro forma adjusts income taxes, depreciation and amortization expense, for the amortization of the retired Allen Unit 4 unrecovered net book value. It also adjusts for the regulatory asset established as a result of the early retirement.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

(B) 1st Supplemental Update
Revised to reflect updated cutoff date of June 30, 2023.

(C) 2nd Supplemental Update
Revised to end Buck application of over amortization at interim rates effective date (9/1/23), rather than rates effective date (1/1/24) since that amortization will be removed with interim rates.

(S3) Settlement
Updated Decommissioning Cost for Allen Unit 4 based on settlement

Docket No. E-7, SUB 1276
Adjust for approved regulatory assets and liabilities
For the Test Period Ending December 31, 2021

E1-10
NC5080 Narrative
Supplemental

E-1 Item 10 Adjustments Requirement
Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment
This pro forma adjusts other O&M, depreciation and amortization, income taxes, working capital and accumulated deferred taxes in the test period for approved regulatory assets and liabilities.

The impact to other O&M, and depreciation and amortization reflects the annualization of new amortizations out of docket E-7 Sub 1214 which began June 1, 2021, and changes to existing amortizations.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

The adjustment to working capital adjusts the balance for the regulatory assets to reflect what the balance will be as of the end of the update period of July 31, 2023.

The adjustment to accumulated deferred taxes adjust the tax effect recorded in the test period for the changes in the regulatory assets.

(B) 1st Supplemental Update
The adjustment to working capital adjusts the balance for the regulatory assets to reflect what the balance will be as of the end of the update period of June 30, 2023.

Adjustments to test year amortizations

Line No.	Description	Test Year Amount		Annualized Amount	
1	**General Plant Reserve Adjustment**				
2	0403500 - Depr of General Plant - System	(12,346)	[1]	(13,907)	[2]
3	The general plant reserve adjustment amortization was updated based on the 2018 Depreciation Study,				
4	which was implemented 6/1/2021. This amortization is not included in the NC3010 Annualize depreciation				
5	expense proforma. The rate base balance related to the General Plant Reserve Adjustment is updated				
6	in the NC3030 Post test year additions proforma.				
7					
8	**Amortization of loss on sale of Hydro plants**				
9	0407305 - Regulatory Debits - Hydro	1,257	[3]	1,138	[4]
10	Prior to the ruling in Docket E-7 Sub 1214, the balance was amortizing based on depreciation rates. The				
11	amortization of the loss on hydro sale was updated to an annual amount of $1,138k in Docket E-7 Sub				
12	1214. Amortization at the new rate was implemented on 6/1/2021.				
13					
14	**Non AMI Meters**				
15	North Carolina - 0407115 - Meter Amortization	$ 7,689	[8]	$ 7,903	[9]
16	The final accounting to reclass the net book value of the retired Non AMI Meters out of the asset				
17	accounts into the regulatory asset account occurred in June 2022. Therefore in the test year, the				
18	amortization/depreciation expense related to these meters was partially in depreciation expense and				
19	partially in amortization expense. Since as of the assets were retired prior to the capital cut off, proforma				
20	NC3030 Adjust for Post test year additions, removes the depreciation associated with those retired				
21	meters. This adjustment is to capture the full amortization expense. Amortization began 8/1/2018 and				
22	was to be over 15 years. To calculate annual amortization the adjustment took the NC Retail balance as				
23	of 6/30/2022 and divided it by 133 which is the number of months remaining of the amortization period,				
24	and multiplied that by 12.				
25	June 30, 2022 Balance	$ 87,586			
26	Number of months remaining	133			
27	Monthly Amortization	$ 659			
28	Annual Amortization	$ 7,903			
29					
30	**Amortization of Protected EDIT at ARAM**				
31	0411115 - DFIT: Federal Excess DIT Amortn (NC Retail Customers - ARAM on Protected)	(24,092)	[5]	(23,372)	[5]
32	In 2021 there was a true up to the 2020 ARAM amortization.				
33					
34	**Amortization of CCR Coal Ash Spend**				
35	0407324 - NC & MW Coal As Amort Exp Amortization of Tranche 2 CCR Coal Ash spend.	19,778	[6]	33,906	[7]
36	Tranche 2 amortization as approved in Docket E-7 Sub 1214 was implemented beginning 6/1/2021.

Docket No. E-7 Sub 1276
Adjust for COVID impacts
For the Test Period Ending December 31, 2021

E1-10
NC5090 Narrative
Third Supplemental

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma calculates the COVID deferral amortization expense as of the rates effective date. Also included are adjustments to the test period to normalize late fees after the Governor's order was lifted on August 15, 2022 and O&M expenses to account for ongoing COVID expenses.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

(A) December Update

The COVID deferral has been updated for actuals for incremental bad debt and expenses through December 2022. There was also a formula error in the April 2021 line, which has been corrected and flowed through the proforma.

(B) 1st Supplemental Update

The COVID deferral has been updated for actuals for incremental bad debt and expenses through April 2023. The ongoing adjustment for safety in NC5090-4 has been reduced to $0. In the 2022 expense support, deferred O&M for call center overtime has been moved to the Return to Work line - it had been inadvertently shifted to "Other".

(C) 2nd Supplemental Update

The COVID deferral has been updated for actuals for incremental bad debt and expenses through May 2023.

(D) 3rd Supplemental Update

The COVID deferral has been updated for actuals for incremental bad debt and expenses through June 2023.

Supplemental

E-1 Item 10 Adjustments Requirement
Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts depreciation and amortization expense associated with the regulatory asset related to Customer Connect. The Company was allowed to accrue a return on the regulatory asset in the same manner that CWIP balances accrue AFUDC through the project in-service date (4/5/2021). As of March 31, 2021, the return accrual ended and amortization over a 15-year period began.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

(B) 1st Supplemental Update
The deferral detail has been updated to reflect continued existing amortization through the updated capital cut off.

DUKE ENERGY CAROLINAS, LLC
Docket No. E-7 Sub 1276
Amortize Deferred Billing
For the Test Period Ending December 31, 2021

E1-10
NC5130 Narrative
Application

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

In the E-7, Sub 1026 Commission Order Granting General Rate Increase, Findings of Fact and Conclusions - Item 40 (page 15), the Commission approved the deferral of the costs to effectuate the lighting audit and billing system change agreed to in paragraph 8.L. of the Stipulation between the Public Staff and the Company. On June 12, 2013, the Public Staff filed a Notice of Settlement in Principle with Duke Energy Carolinas. On June 17, 2013, Duke Energy Carolinas and the Public Staff entered into and filed the Stipulation resolving all of the issues in this proceeding between the two parties. The Stipulation provided that the Company shall conduct an audit and modify its billing system to effectuate the Company's proposed reduction in the extra facilities rate for all customers, including the additional facilities charges for existing lighting customers.

This pro forma adjusts depreciation and amortization expense associated with the regulatory asset related to these costs.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

DUKE ENERGY CAROLINAS, LLC
Docket No. E-7 Sub 1276
Adjust Coal Inventory
For the Test Period Ending December 31, 2021

E1-10
NC6010 Narrative
Partial Settlement

E-1 Item 10 Adjustments Requirement
Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment
This pro forma adjustment reflects the Company's requirement for a level of coal inventory equal to the coal needed for a 40 day full load burn priced at the projected average delivered coal cost for the fuel billing period as discussed by Witness Verderame in Docket No. E-7, Sub 1263 plus the fixed transportation cost.

Days of coal inventory on the storage piles refers to "full load burn days". Therefore, one "day" of supply is equal to how much coal would be burned at any given generating unit if it was to run at full load for 24 hours straight. The projected full load burn for the entire coal-fired fleet in the Carolinas is 51,746 tons per day which means that if there are 40 days of supply on the system, then there are 2.1 tons (40 * 51,746) on the storage piles.

The Company does not use "average" burn to report how many "days" of inventory are in storage because the average burn for any given period can vary greatly due to many factors and it can over-state the amount of inventory in storage. For example, the biggest risk would be to run out of coal during a hot summer when the entire coal-fired fleet is needed to run at full load. By reporting the inventory using "full load burn", we have stated how many days our units can run during a critical time when they are all expected to be running at full load.

[S3] Settlement
Agreed to 35 days inventory.

John Verderame Direct Testimony - Docket No. E-7, Sub 1263

Q. WHAT ARE THE PROJECTED COAL AND NATURAL GAS CONSUMPTIONS AND COSTS FOR THE BILLING PERIOD?

A. DEC's current coal burn projection for the billing period is 3.3 million tons, compared to 5.3 million tons consumed during the test period. DEC's billing period projections for coal generation may be impacted due to changes from, but not limited to, the following factors: (1) delivered natural gas prices versus the average delivered cost of coal; (2) volatile power prices; and (3) electric demand. Combining coal and transportation costs, DEC projects average delivered coal costs of approximately $91.89 per ton for the billing period compared to $78.22 per ton in the test period. This increase in delivered costs is primarily driven by increased coal commodity costs due to limited coal supply and increased domestic and international demand. This includes an average projected total transportation cost of $29.63 per ton for the billing period, compared to $31.68 per ton in the test period. This projected delivered cost, however, is subject to change based on, but not limited to, the following factors: (1) exposure to market prices and their impact on open coal positions; (2) the amount of Central Appalachian coal DEC is able to purchase and deliver and the non-Central Appalachian coal DEC is able to consume; (3) changes in transportation rates; (4) performance of contract deliveries by suppliers and railroads which may not occur despite DEC's strong contract compliance monitoring process; and (5) potential additional costs associated with suppliers' compliance with legal and statutory changes, the effects of which can be passed on through coal contracts.

Docket No. E-7 Sub 1276
Adjust cash working capital for present revenue annualized and proposed revenue
For the Test Period Ending December 31, 2021

E1-10
NC6020 Narrative
Partial Settlement

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts cash working capital to incorporate the impact of the other pro forma adjustments. It also calculates the additional cash working capital required as a result of the proposed increase in rates. The adjustment is in accordance with the Commission's March 21, 2016 order in Docket No. M-100 Sub 137.

(B) 1st Supplemental Update
Processed updated Cash working capital based on changes from Supplemental updates
Updated Lincoln Siemens lead/lag days from (15.21) to 36.03 on 'COS-920 Rev & Exp LL Detail' tab - see PSDR 102-2
Incorporated Lead Lag Correction

(C) 2nd Supplemental Update
Processed updated Cash working capital based on changes from Supplemental updates
Made revisions and corrections as noted in PSDR 152 and PSDR 155.

(D) 3rd Supplemental Update
Processed updated Cash working capital based on changes from Supplemental updates

(S3) Settlement
Processed updated Cash working capital based on changes from Settlement updates

Docket No. E-7 Sub 1276
Synchronize interest expense with end of period rate base
For the Test Period Ending December 31, 2021

E1-10
NC6030 Narrative
Partial Settlement

E-1 Item 10 Adjustments Requirement
Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment
This pro-forma adjusts income taxes to reflect the tax impact that results from annualizing interest expense based on the end-of-period, adjusted rate base.
The impact to income taxes was determined as follows:
First, multiply rate base after all pro-forma adjustments have been made by the long-term debt ratio to calculate an adjusted long-term debt balance. Second, multiply the adjusted long-term debt balance by the end of year cost of long-term debt to calculate annualized interest expense. Third, subtract interest expense incurred during the test period from annualized interest expense and multiply the difference by the statutory tax rate.

(B) 1st Supplemental Update
Updated Interest Synchronization based on changes from the supplemental updates and the debt rate as of April 2023.

(C) 2nd Supplemental Update
Updated Interest Synchronization based on changes from the supplemental updates and the debt rate as of May 2023.

(D) 3rd Supplemental Update
Updated Interest Synchronization based on changes from the supplemental updates and the debt rate as of June 2023.

[S3] Settlement

NC6040 Narrative
Application

E-1 Item 10 Adjustments Requirement
Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

On November 18, 2021 Governor Roy Cooper signed into law the 2021 Appropriations Act which affects various North Carolina Taxes including franchise taxes.

The Act simplifies the franchise tax calculation. Effective with the 2022 income tax returns filed in 2023, franchise tax will be calculated on a corporation's North Carolina apportioned net worth. This change will result in a reduction in the Company's Franchise tax expense. This proforma, adjusts franchise tax to the anticipated new level under the new law.

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

As noted in Public Staff Data request 102-14 this pro forma reflects a correction to the Per Books Lead Lag amount. While responding to data request 102-14, the Company discovered an error in the calculation of Cash Working Capital Related to NC Sales Tax which also impacted the calculation of remaining other operation & maintenance expense.

E-1 Item 10 Adjustments Requirement

Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This proforma reflects an adjustment to rate base to reflect flowing back additional Unprotected EDIT to customers using a levelized EDIT Rider consistent with what was done in Docket E-7 Sub 1214. The amounts are offsets to rate base as of the end of the test year. With levelized give back, the amounts should not be included in rate base.

This proforma reflects an adjustment to rate base for the additional Unprotected EDIT. The company is proposing to flow these additional amounts back to customers through the exisitng levelized EDIT rider as shown in Bowman Exhibit 3.

DUKE ENERGY CAROLINAS, LLC
Docket No. E-7 Sub 1276
Normalize for Storm Costs
For the Test Period Ending December 31, 2021

E1-10
NC7010 Narrative
Third Supplemental

E-1 Item 10 Adjustments Requirement
Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma adjusts operation and maintenance expenses and income taxes in the test period to normalize for storm costs.

The impact to operation and maintenance expense is determined by calculating an inflated average level of storm costs experienced by the Company over the last ten years and then subtracting storm restoration costs incurred during the test period to adjust for a normalized amount of costs.

(A) December Update
NC7010-2 has been updated to reflect final 2021 storm costs, as well as updated estimates for the 2022 storm costs through December 2022. The CPI and PPI data has also been updated to reflect the latest inflation data on NC7010-1. Also, in the original filing, within a couple of the storm years, the inflation adjustments in NC7010-1 column "N" had inadvertently left off the 2022 inflation impacts. Those have been corrected.

(B) 1st Supplemental Update
NC7010-2 has been updated to reflect the most current estimates for the 2022 storm costs as of April 2023, which also flow to NC7010-1. The proforma has been updated with the latest estimates and support, but the revenue requirement is not impacted.

(C) 2nd Supplemental Update
NC7010-2 has been updated to reflect the most current estimates for the 2022 storm costs as of May 2023, which also flow to NC7010-1. The proforma has been updated with the latest estimates and support, but the revenue requirement is not impacted.

(D) 3rd Supplemental Update
NC7010-2 has been updated to reflect the most current estimates for the 2022 incremental system storm costs as of June 2023, which also flow to NC7010-1.

Also, two corrections were made to the proforma. First, the test period storm costs were in error and the correct amount is now reflected, including both COS-0331 and COS-0332.

In addition, the 2020 Storm Year, specifically the incremental costs for the January 11 wind event on NC7010-2, which was incorrectly stated in the initial proforma was updated.

DUKE ENERGY CAROLINAS, LLC
Docket No. E-7 Sub 1276
Adjust for Storm Securitization Deferrals
For the Test Period Ending December 31, 2021

E1-10
NC7040 Narrative
Third Supplemental

E-1 Item 10 Adjustments Requirement
Provide the detail work papers showing calculations supporting all accounting, pro forma, end-of-period, and proposed rate adjustments in the rate application to revenue, expense, investment, and reserve accounts for the test year and a complete detailed narrative explanation of each adjustment, including the reason why each adjustment is required. Explain all components used in each calculation. Index each calculation to the accounting, pro forma, end-of-period, and proposed rate adjustment which it supports.

Detailed Narrative Explanation of Adjustment

This pro forma calculates the amortization expense and impacts to rate base related to the Servicing and Administration fee overcollection and the Upfront bond issuance costs overcollection as a result of the NC Storm Securitization docket.

The impact to income taxes is determined by multiplying taxable income by the statutory tax rate.

(A) December Update
Actuals have been updated for NC7040-2 - S&A Costs. Also included is an update of the admin fee component of the deferral. The projections of the admin fee through the capital cutoff was inadvertently overstated.

(B) 1st Supplemental Update
Actuals have been updated for NC7040-2 - S&A Costs through April 2023.

(C) 2nd Supplemental Update
Actuals have been updated for NC7040-2 - S&A Costs through May 2023.

(D) 3rd Supplemental Update
Actuals have been updated for NC7040-2 - S&A Costs through June 2023. Also, the Second Supplemental proforma was still extended to the original capital cutoff date of July 2023 - the cutoff has been adjusted to be June 2023.
