NERP FACT SHEET

EXPANDING SECURITIZATION:

ACCELERATING THE CLEAN ENERGY TRANSITION AND BUILDING THE NC ECONOMY

The 2020 North Carolina Energy Regulatory Process prioritized energy reforms that would drive affordability, carbon-reduction, and align regulatory incentives with policy goals.

WHAT IS THE OPPORTUNITY?

The declining costs of renewable energy and higher cost of operating coal plants relative to other resources has increased interest in retiring coal plants in a low-cost way. However, these coal units remain in the portfolio due to the utilities' need to recover their investment and maintain reliability.

In order to retire coal plants, the remaining undepreciated value must be addressed. Securitization, an innovative financing mechanism, has the potential to create a win-win-win for customers, utilities, and communities. If properly designed, it can be a tool to help facilitate a system-wide transformation - lowering customers' bills, reducing air and water pollution, supporting coal plant communities in the transition, and allowing utilities to reinvest in clean energy to replace lost revenue from legacy coal plant investments. This tool is already available to North Carolina utilities to recover storm costs. Expanding securitization to retire coal plants requires enabling legislation and subsequent implementation to provide creditors with assurances that sufficient funds will be collected to cover the costs of the bonds over its lifetime.

WHAT IS SECURITIZATION?

Securitization is a refinancing mechanism involving the issuance of bonds to raise funds to refinance the remaining undepreciated value of existing coal plants. The bonds are paid back over time through a dedicated surcharge on customer bills. Because the surcharge is irrevocable and payment to the lender is basically "guaranteed" through the legislation, the bonds can typically be issued at an interest rate even lower than the usual utility bond interest rate. In addition, most major credit rating agencies do not include securitization debt, up to certain limits, in assessing the utilities debt to equity ratio for credit rating purposes. Therefore, the utility can generally refinance the outstanding undepreciated value with 100% securitization financing instead of using its standard combination of debt and equity financing. Both of these factors combined lead to cost savings for customers.

By itself, securitization would translate to a loss in earnings for the regulated utility by reducing the total amount of capital in which the utility is invested. However, securitization can also be paired with utility reinvestment in replacement capacity to maintain reliability. Because this replacement generation would be financed using a combination of debt and equity, this option has the potential to recoup and even grow utility earnings.

HOW BIG IS THE OPPORTUNITY IN NC?

Duke Energy currently operates six coal plants totaling more than 10,000 MW of capacity. The low cost of natural gas and renewables, along with additional environmental compliance costs, has shifted electricity generation toward cheaper sources of energy in recent years, and the trend is expected to continue as the economic gap widens. Coal plants in the state, originally built to run 75-80% of the time, are now running, on average, only 35% of the time.

Recognizing the significant potential in ratepayer savings, the North Carolina Utilities Commission ordered Duke Energy to evaluate the merits of continuing to operate the coal units by examining the most economic and the earliest practicable dates of retirements. In its 2020 IRP, for the most economic case, Duke Energy recommended the retirement of 11 of 18 units by 2030, even without securitization. For the earliest practicable retirement case, Duke Energy identified that all coal units could be retired by 2030, with one unit converted to natural gas. Securitization should be a tool made available to North Carolina

OFFICIAL COPY
Sept 02 2023

regulators and utilities for cases where it would provide a benefit in customer rates to retire and replace the coal plant.

HOW DOES SECURITIZATION SOLVE THE PROBLEM?

Through the refinancing of the plant using low-cost debt, securitization has the potential to:

- Create customer savings on day-one and for the remainder of the plant's life due to lower costs of financing
- Create funds for transition assistance to workers and communities affected by plant closures
- Keep the utility whole through reinvestment in replacement renewable generation and/or storage

Early economic retirement of North Carolina's coal plants and replacement with zero emitting resources is estimated to achieve the 70% reduction in greenhouse gas emissions goal specified in the Clean Energy Plan by itself, provided the amount of imported electricity and its carbon intensity remain at or below historical levels.

As North Carolina has a significant amount of coal capacity that could be financed to provide ratepayer benefits, the large amount of generation needing to be replaced must be planned carefully to ensure costs are minimized, utilities are fairly compensated, system reliability is maintained, cleaner technology solutions are deployed, and pollution levels are reduced.

HOW IS SECURITIZATION DIFFERENT FROM CURRENT OPTIONS TO FINANCE COAL PLANT RETIREMENTS?

The three options currently available to utilities and regulators all have drawbacks and benefits, especially for customers.

Accelerate the retirement of these plants through a rapid return of unrecovered investment (e.g., through accelerated schedule of undepreciated assets than normally allowed over the project life). This helps get the uneconomic plant offline more quickly and likely saves ratepayers money long term. But accelerated depreciation could cause short-term rate spikes, which would impact businesses and low-to-moderate income customers acutely.

Retire a plant and create a regulatory asset**.** This allows the utility to continue to earn a return on a plant that is no longer in service, until the plant is fully depreciated. The downside of this path is that customers are paying for an asset that provides no benefits. For the utility there is also the risk of future disallowance, as there is no guarantee that the public utilities commission will continue to let the regulatory asset be charged to ratepayers.

Disallow the utility from recovering any remaining plant balance. The public utilities commission could decide that the uneconomic plant is no longer "used and useful" and prohibit the utility from recovering any remaining plant balance. This has obvious downsides for the utility, possibly impacting their credit rating, impacting customers over the long run, and potentially chilling interest in future investments.

HAS SECURITIZATION BEEN USED BEFORE?

In 2019, following the significant disaster recovery and response expenses incurred from hurricanes Matthew and Florence, the North Carolina General Assembly passed SB559 (SL 2019-244) to permit financing for certain storm recovery costs.

Though securitization's proposed use for early coal retirement is recent, it has been used extensively in the past for a variety of reasons – ranging from recovering costs from a damaged plant[1] to financing pollution control upgrades[2] to enabling electricity market restructuring[3]. It is a financial mechanism that Wall Street is both familiar and comfortable with.

Securitization for early plant retirement is already enabled in four states, three of which passed legislation in 2019. PNM Resources in New Mexico is in the process of securitizing its San Juan coal plant[4] and replacing it with a portfolio of renewable energy and storage. Duke Energy Florida securitized $1.3 billion of the remaining plant balance of the Crystal River nuclear plant, resulting in more than $700 million in customer savings. Many other states are expected to introduce supporting legislation in the 2021 session.

This fact sheet represents the work of stakeholders as of 12/18/2020.

About the North Carolina Energy Regulatory Process

Governor Cooper's Executive Order 80 mandated the development of a clean energy plan for the state of North Carolina. The Clean Energy Plan recommended the launch of a stakeholder process to design policies that align regulatory incentives with 21st century public policy goals, customer expectations, utility needs, and technology innovation. The stakeholder process was launched in February 2020 and has led to policy proposals on energy reform.

NERP STATUTE COMPARISON

SECURITIZATION STATUTE COMPARISON

The 2020 North Carolina Energy Regulatory Process (NERP) prioritized energy reforms that would drive affordability, carbon-reduction, and align regulatory incentives with policy goals.

INTRODUCTION

Securitization is a financial mechanism allowing bonds to be used to recover undepreciated capital costs of assets and, in some cases, replace other losses of revenue. Securitized bonds, also called ratepayer backed bonds, must be authorized by state legislation. A comparison of securitization statutes that include recovery of undepreciated plant balances and transition assistance for workers and communities affected by early plant retirements can be useful as North Carolina decision makers consider this issue.

Key provisions in legislation typically include:

- Creation of the property right which underlies the bonds
- Definition of allowable uses for the bonds
- Key protections for bond purchasers
- Process for defining bond issuance amount and procedures
- Role of the Public Utilities Commission
- Role of the Public Utility

The North Carolina securitization legislation passed in 2019 contains the basic legal and financial components for creating securitized bonds in statute. However, the only allowable use for the bonds was is recovery of costs incurred from storm damage.

Statutes in other states provide for different or additional uses for the bonds. Specifically, use of bonds for utility capital recovery in the event of early plant retirement and for transition assistance for communities and workers affected by early plant retirements. Statutes permitting these uses also define acceptable capital reinvestment opportunities for the utility retiring an uneconomic plant. Inclusion of a reinvestment or "capital recycling" pathway is a key to securing utility support for securitization legislation with the plant retirement bond use.

Securitization statutes specify the role of the public utilities commission in issuing the financing order for the bonds and its oversight in the bond issuance process. Commission oversight is key to protecting ratepayer interests. Comparisons between the commission's role as defined in the North Carolina Statute, and statutes in Colorado, Montana, New Mexico and Michigan are provided.

COMPARISON OF SECURITIZATION STATUES

State	Specified Bond Uses				Utility	Regulator
	Storm Costs	*Plant Retirement*	Retire Debt/Equity	*Transition Assistance*	Reinvestment Options	*Strength of PUC Role*
North Carolina	**X**					medium
Colorado		**X**		**X**	**X**	strong
Montana		**X**			**X**	strong
New Mexico		**X**		**X**	**X**	weak
Michigan		**X**	**X**			weak

BEYOND STORM COSTS: BOND USES AUTHORIZED IN CO, MT, NM, MI STATUTES

1. PLANT RETIREMENT

Using low-interest securitized bonds to replace higher cost utility capital remaining in a retired plant saves ratepayers money. Utility concerns about maintaining rate base often require the legislation include a pathway for reinvestment or "recycling" the returned utility capital into other approved uses. Securitization statutes in Colorado, Montana and Michigan allow securitized bonds to be used for recovering the remaining utility capital invested in a retired power generating station. The New Mexico statute allows bond use for the retirement of a specific power generating station defined in the statute.

Colorado

CO SB19-236, Article 41 – The Colorado Energy Impact Bond Act, part of the Public Utility Commission Sunset/Reauthorization Act

Allowable Use: The allowable uses for the bonds extend to the "pretax costs", including unrecovered capitalized cost of a retired electric generating facility that will be retired, and also the "pretax costs" incurred previously related to a commission-approved closure of an electric generating facility retired before the statute was in effect. (CO SB19-236 - page 52, lines 15-24; line 27; page 53, lines 1-3)

Montana

2019 MT HB 467, placed securitization in Statute.

Allowable Use: The two allowable bond uses are the "pretax costs" incurred when the utility retires or replaces electric generating infrastructure or facilities located in Montana, and the "pretax costs" previously incurred related to the closure or replacement or electric generating infrastructure or facilities. (2019 MT HB 467 – page 4, (13)(a))

New Mexico

NM 2019 Energy Transition Act. Securitization is a centerpiece of this act which also included a renewable portfolio standard and climate goals.

Allowable Use: The act allows bond use for the abandonment costs of a "qualifying generating facility", and specifies cap on the amount of money which may be securitized. Other specific dollar amounts for decommissioning and mine reclamation costs, and job retraining are listed as allowable uses. The specificity of the dollar amounts and retirement date for the generating station are tied to a specific plant owned by Public Service of New Mexico (PNM), one of the primary advocates for the bill. The qualifying generating facility language does have some flexibility for application to other plants in New Mexico. (2019 NM SB 489 – page 4, lines 9-24; page 9, lines 6-19)

OFFICIAL COPY
Sep 01 2023

Michigan

MI 2000, Act 142, Customer Choice and Electricity Reliability Act included securitization. It was used in 2016 by Consumers Energy for the early retirement of a 950MW coal-fired electric generating station. The bond issue amount was $389.6M. Recently, Consumers Energy filed for a $702.8M financing order related to the early retirement of Units 1 & 2 at the Karn coal-fired generating station.

Allowable Use: Refinancing or retirement of debt or equity. (MI 1939 PA 3, Sec. 10h (g); Sec. 10j (1)(a))

2. TRANSITION ASSISTANCE: AUTHORIZED IN CO AND NM STATUES

When securitization is used for the early retirement of an electric generating facility, some statutes passed in 2019 added a new use for securitized bonds, providing transition assistance to workers and communities affected by the closure.

Colorado

The introduced 2019 bill, HB19-1037, included a formula for sharing the savings realized by refinancing the remaining capital in a retired plant between ratepayers (85% of the savings) and the affected workers and communities (15% of the savings). The savings would be calculated as the net present value of the savings over the tenor (life) of the bonds, compared to the amount ratepayers would have paid to retire the plant without the lower-cost bonds. However, this formula did not survive the legislative process. Instead, the bill includes a simple phase allowing bonds to be used for transition assistance. The decision on the amount of funds for transition assistance will be made by the Commission as part of the financing order.

Allowable Use: The statute allows the bonds to be used for "amounts for assistance to affected workers and communities, if approved by the Commission". (CO SB19-236 - page 52, lines 25-26)

New Mexico

The Energy Transition act contains very detailed guidelines, establishing three different funds for state agencies to administer transition funding for affected Indian communities, affected communities and workers.

Allowable Use: 0.5% of amount bonded is earmarked for the energy transition Indian affairs fund; 1.65% of the bonded amount goes to the energy transition economic development fund; and 3.35% of the bonded amount goes to the energy transition displaced worker assistance fund. (2019 NM SB 489 – page 4, lines 24-25; page 5, lines 1-3; 20-21; SECTION 16, page 40-47)

UTILITY REINVESTMENT: INCLUDED IN CO, MT, NM STATUTES

Colorado

Reinvestment/Capital Recycling: Specific opportunities for the utility to reinvest capital recovered from securitizing a retired plant are not listed in Article 41. Instead, reinvestment opportunities for the utility are defined earlier in the statute in the section describing the Clean Energy Plan the utility is required to submit to the Commission. This plan requires the utility to adopt carbon reduction goals, strategies for achieving the goals, projected costs and proposed new clean energy acquisitions required to meet the goals. The utility is awarded up to 50% ownership of the new clean energy acquisitions. (CO SB19-236 - page 17, lines 1-17)

Montana

Reinvestment/Capital Recycling: The statute provides guidance on how the utility shall expend or invest the funds received from a bond issue. It will first reduce the balance owed on the retired electric generating facility. Following that, the utility may invest or expend funds to own least-cost generation resources, electric storage, network modernization, or to replace any damaged or destroyed electric transmission facilities. (2019 MT HB 467 – page 18-19, Section 18)

New Mexico

Reinvestment/Capital Recycling: The statute provides a detailed process for how PNM must replace the power from the abandoned generating facility. The specificity is partially a means to replace property tax base for the affect school district and community. (2019 NM SB 489 – page 10, lines 2-25; page 11, lines 1-23)

ROLE OF THE PUBLIC UTILITIES COMMISSION: STATUES IN CO, MT, NM, MI

Securitization statutes should describe the role of the public utilities commission in issuing a financing order that 1) allows the issuance of bonds; 2) establishes oversight of the bond issuance process; and 3) protects ratepayer interests throughout both processes. The stronger the commission's role, and the more oversight it exercises, the better the outcome for ratepayers.

OFFICIAL COPY
Sept 02 2023

During the legislative process, the utility has an interest in limiting the commission's role and oversight authority; ratepayer advocates typically push for the opposite outcome, with compromises occurring to achieve bill passage. Among the state statutes we review in this memo, the Colorado statute creates the strongest commission oversight role, followed by Montana, Michigan, and then New Mexico. A key component for empowering a commission to conduct effective oversight is the authority to hire outside financial advisors to assist the commission. Funds for outside advisors or additional staff to manage the bond issuance process may not be covered in a commission's normal staff budget. Statutes typically allow commission expenses related to a bond issue to be covered as a part of the bond issue expenses. If a utility receives a financing order, but decides not to issue the bonds, commission expenses incurred in producing the financing order would have to be paid by the utility, which can recover those expenses in a future rate case.

The existing North Carolina securitization statute provides reasonable oversight authority for the commission. The Commission can hire outside financial advisors, with their costs paid as part of the bond issue. The North Carolina statute, however, does not address the situation of recovery of commission expenses when the utility does not follow through and issue bonds.

Colorado

Public Utility Commission Role: The Statute gives the Commission the authority to:

- Require the bonds provide maximum net present value savings for ratepayers (CO SB19-236 - page 59, lines 14-27)
- Conduct oversight of how the bond issue will be structured, priced and marketed to achieve maximum savings for ratepayers (CO SB19-236 - page 60, lines 14-22)
- Attach conditions to the financing order to maximize benefits and minimize risks for all parties (CO SB19-236 - page 66, lines 4-8)
- Hire outside financial advisors to assist the Commission in its oversight work (CO SB19-236 - page 67, lines 9-20)
- Require the utility to simultaneously add a negative cost rider to ratepayer bills to reflect the decreased cost of service and counterbalance the bond repayment charge (CO SB19-236 - page 62, lines 19-24)
- Conduct a rule making for how to manage the securitization financing order process. (CO SB19-236 - page 65, line 27)

Montana

Public Utility Commission Role: The Statute gives the Commission the authority to:

- Require the bonds to provide substantial quantifiable savings for ratepayers (2019 MT HB 467, Section 5 (iv)(c) (I)(ii)
- Include findings determined by the commission to be in the best interests of consumers. (2019 MT HB 467, Section 5 (vii)
- Require the utility to reduce rates simultaneously with the addition of the bond repayment charge on ratepayer bills (2019 MT HB 467, Section 5 (B))
- Hire outside financial advisors to assist the Commission in its oversight work. (2019 MT HB 467, Section 5 (B)(3)(f))
- Conduct a rule making for how to manage the securitization financing order process (2019 MT HB 467, Section 19)

Michigan

Public Utility Commission Role: The Statute gives the Commission limited authority:

- Oversight to ensure customer savings is weak – savings must be "tangible and quantifiable", but no reference is made to maximize savings or how savings should be calculated. ((MI 1939 PA 3, Sec.10i (2)(b)(c))
- The authority to hire outside financial advisors to assist the Commission in its oversight work is included. ((MI 1939 PA 3, Sec.10i (10))

New Mexico

Public Commission Utility Role: The Statute gives the Commission very limited authority:

- No oversight to ensure customer savings. Savings are calculated by applicant utility as it deems appropriate, and submitted to the Commission as part of the financing order. (2019 NM SB 489 – page 10, lines 2-25; page 13, lines 17-25)
- Commission has no authority to determine the amount to be securitized for plant retirement or transition assistance. These amounts were determined by the legislature and are in Statute. (2019 NM SB 489 – page 4, lines 9-25; page 40-47, Section 16)
- Commission is required to approve a financing order from qualified applicant utility, if financing order application meets Statute requirements. (2019 NM SB 489 – page 17, lines 7-17)
- Commission does have the power to review and approve replacement generation options. (2019 NM SB 489 – page 10, lines 2-25; page 11, lines 1-23)

RECOMMENDATIONS

- The North Carolina Storm Recovery Costs securitization statute could be amended to include additional permitted uses for the bonds. Additional uses could include plant retirement costs and transition assistance for affected communities and workers.
- If plant retirement becomes an allowable use for the bonds, the bill should also include guidance on re-investment opportunities for the utility.
- The existing statute permits the Commission to hire outside financial advisors with the costs paid as part of the bond issue. Adding a provision for Commission cost recovery in the event that bonds are not issued by the utility, similar to the language in the Colorado statute, may be helpful.
- The North Carolina statute provides reasonable oversight authority for the commission. Attempting to strengthen commission authority might trigger utility resistance to the bill.

NERP ANALYSIS SUMMARY

GENERATION ASSET RETIREMENT FINANCIAL ANALYSIS

COMPARISON OF SECURITIZATION AND REGULATORY ASSET TREATMENT: RELATIVE IMPACTS ON RATEPAYER SAVINGS, UTILITY EARNINGS, AND COMMUNITY ASSISTANCE

The 2020 North Carolina Energy Regulatory Process prioritized energy reforms that would drive affordability, carbon-reduction, and align regulatory incentives with policy goals.

SUMMARY OF FINDINGS

Based on financial analysis performed for a select group of Duke Energy Progress (DEP) coal plants, Rocky Mountain Institute (RMI) finds that securitization (with reinvestment) leads to greater ratepayer savings (in the short and long term) than using regulatory asset treatment as a method for early retirement. Furthermore, securitization with reinvestment provides the utility opportunity for earnings through additions to rate base and could fund transition assistance for impacted communities.

For example, securitizing Mayo (with utility reinvestment) could save ratepayers between $13-19/MWh (or $18-29MM) in the first year and between $3-5/MWh (or $46-96MM) on a levelized basis, compared to a regulatory asset treatment. The utility has a significant earnings opportunity with securitization, though less than through the regulatory asset treatment – up to $600-800MM with the former vs. up to $800-1100MM (on a levelized basis and including tax credits) with the latter. Finally, securitization could result in between $8-15MM in community assistance.

While RMI's analysis shows securitization generating ratepayer savings compared to a regulatory asset treatment, the magnitude of that difference varies. In Roxboro 3, for example, securitization with reinvestment could save ratepayers between $4-6/MWh (or $9-13MM) in the first year and between $17-21MM on a levelized basis, compared to regulatory asset treatment. The earnings opportunity for the utility in retiring and replacing Roxboro 3 is similar for both securitization & regulatory assets – up to $700-800MM. Finally, between $2-4MM in community assistance could be made available for this plant.

The ratepayer savings, utility earnings and community assistance opportunity for Roxboro 4 is similar to that of Roxboro 3, for both securitization and regulatory asset treatment.

IMPORTANT CAVEATS AND ASSUMPTIONS

RMI's financial model was used to provide *relative* and *illustrative* modeling results – in their current form, the results are not meant to estimate the absolute size of ratepayer savings or utility earnings from any retirement method.

Rather, the results aim to show the tradeoffs (for the utility, customer and community) between two different methods of early plant retirement, and the relative magnitude of the differences in the two approaches.

If a decision is made to investigate the actual implementation of securitization, the analysis would have to be revisited to more accurately account for (among other items):

- The expected 'ramp down' of existing coal plants, prior to retirement
- The sequencing of replacement generation and storage, relative to early retirement
- Implications of early retirement at the fleet level (vs. the individual plant level)

OFFICIAL COPY
Sept 02 2023

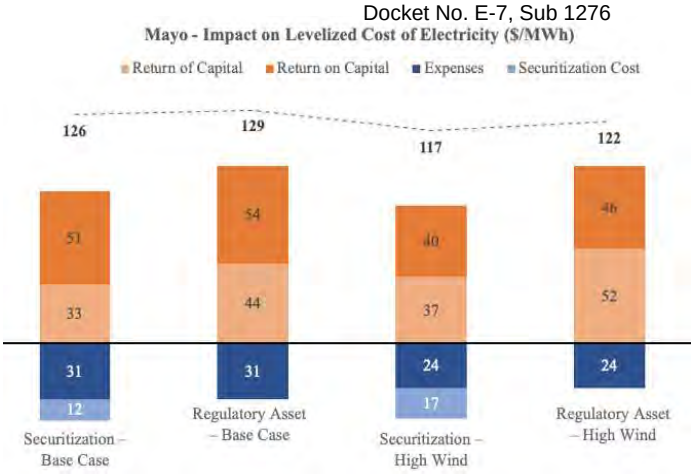
RMI believes that, while the above considerations are critical to implementation, they do not significantly alter the potential *opportunity* presented by securitization for customers, the utility and the community, relative to a regulatory asset treatment.

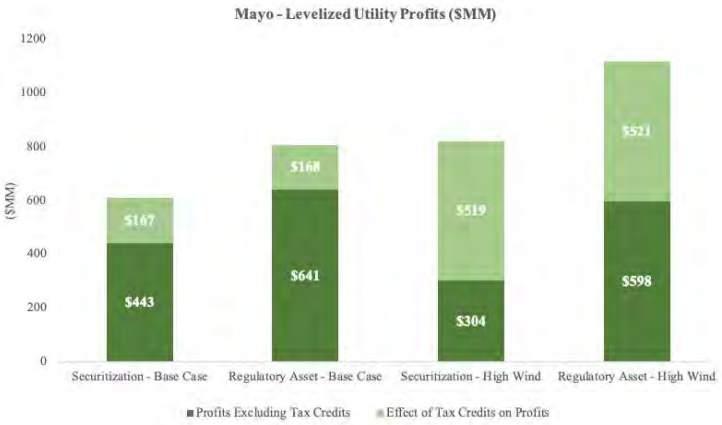
ILLUSTRATIVE MODELING RESULTS

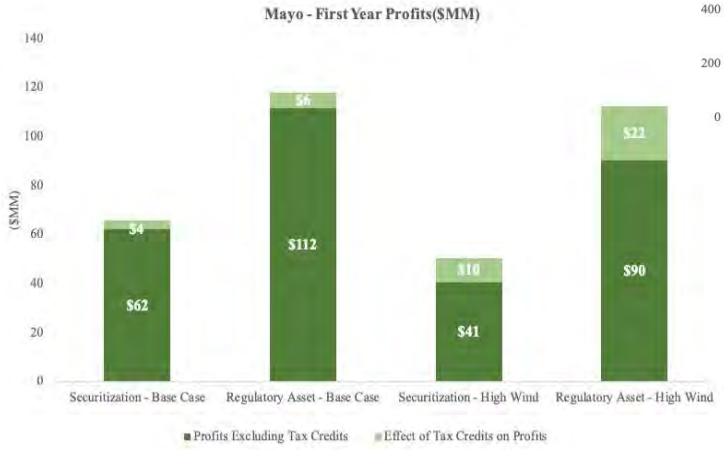
RMI modeled three DEP plants – Mayo 1, Roxboro 3 and Roxboro 4. For each of the plants, two methods of retirement were considered: i) securitization with reinvestment and, ii) regulatory asset treatment.

Furthermore, to determine the retirement year and subsequent replacement portfolio for each plant, Scenario A (Base Case without Carbon Policy) and Scenario D (High Wind) from the DEP 2020 Integrated Resource Plan were used.

The results for Mayo 1 are shown below as an illustrative example:







This fact sheet represents the work of stakeholders as of 12/18/2020.

GENERAL ASSEMBLY OF NORTH CAROLINA SESSION 2021

SENATE/HOUSE BILL XXX

A BILL TO BE ENTITLED

"AN ACT TO PERMIT FINANCING FOR CERTAIN UNDEPRECIATED UTILITY PLANT COSTS AND FOR TRANSITION ASSISTANCE FOR AFFECTED WORKERS AND COMMUNITIES"

The General Assembly of North Carolina enacts:

SECTION 1. Article 8 of Chapter 62 of the General Statutes is amended by adding a new section to read:

"**§ 62-173. Financing for certain energy transition costs.**

(a) Definitions. – The following definitions apply in this section:

(1) Ancillary agreement. – A bond, insurance policy, letter of credit, reserve account, surety bond, interest rate lock or swap arrangement, hedging arrangement, liquidity or credit support arrangement, or other financial arrangement entered into in connection with energy transition bonds.

(2) Assignee. – A legally recognized entity to which a public utility assigns, sells, or transfers, other than as security, all or a portion of its interest in or right to energy transition property. The term includes a corporation, limited liability company, general partnership or limited partnership, public authority, trust, financing entity, or any entity to which an assignee assigns, sells, or transfers, other than as security, its interest in or right to energy transition property.

(3) Bondholder. – A person who holds an energy transition bond.

(4) Code. – The Uniform Commercial Code, Chapter 25 of the General Statutes.

(5) Commission. – The North Carolina Utilities Commission.

(6) Customer securitization savings – The arithmetic difference between the net present value of the costs to customers that are estimated to result from the issuance of energy transition bonds and the net present value of the costs that would result from the application of the traditional method of financing and recovering energy transition costs from customers.

(7) Energy transition bonds. – Bonds, debentures, notes, certificates of participation, certificates of beneficial interest, certificates of ownership, or other evidences of indebtedness or ownership that are issued by a public utility or an assignee pursuant to a financing order, the proceeds of which are used directly or indirectly to recover, finance, or refinance Commission-approved energy transition costs and financing costs, and that are secured by or payable from energy transition property. If certificates of participation or ownership are issued, references in this section to principal, interest, or premium shall be construed to refer to comparable amounts under those certificates.

(8) Energy transition charge. – The amounts authorized by the Commission to repay, finance, or refinance energy transition costs and financing costs and

OFFICIAL COPY
Sep 01 2023

that are nonbypassable charges (i) imposed on and part of all retail customer bills, (ii) collected by a public utility or its successors or assignees, or a collection agent, in full, separate and apart from the public utility's base rates, and (iii) paid by all existing or future retail customers receiving transmission or distribution service, or both, from the public utility or its successors or assignees under Commission-approved rate schedules or under special contracts, even if a customer elects to purchase electricity from an alternative electricity supplier following a fundamental change in regulation of public utilities in this State.

(9) Energy transition costs. – All of the following:

(a) (i) at the option of and upon petition by an public utility, and as approved by the commission, any of the pretax costs that the electric utility has incurred or will incur that are caused by, associated with, or remain as a result of the retirement of an electric generating facility located in the state.

(ii) as used in this subsection, "pretax costs," include, but are not limited to, the unrecovered capitalized cost of a retired electric generating facility, costs of decommissioning and restoring the site of the electric generating facility, and other applicable capital and operating costs, accrued carrying charges, deferred expenses, reductions for applicable insurance and salvage proceeds and the costs of retiring any existing indebtedness, fees, costs, and expenses to modify existing debt agreements or for waivers or consents related to existing debt agreements.

(b) amounts for transition assistance to affected workers and communities if approved by the commission;

(c) pretax costs that an electric utility has previously incurred related to the commission-approved closure of an electric generating facility occurring before the effective date of this section.

(d) energy transition costs do not include any monetary penalty, fine, or forfeiture assessed against an electric utility by a government agency or court under a federal or state environmental statute, rule, or regulation.

(10) Energy transition property. – All of the following:

a. All rights and interests of a public utility or successor or assignee of the public utility under a financing order, including the right to impose, bill, charge, collect, and receive energy transition charges authorized under the financing order and to obtain periodic adjustments to such charges as provided in the financing order.

b. All revenues, collections, claims, rights to payments, payments, money, or proceeds arising from the rights and interests specified in the financing order, regardless of whether such revenues, collections, claims, rights to payment, payments, money, or proceeds are imposed, billed, received, collected, or maintained together with or commingled with other revenues, collections, rights to payment, payments, money, or proceeds.

OFFICIAL COPY
Sep 02 2023

(11) Financing costs. – The term includes all of the following:

a. Interest and acquisition, defeasance, or redemption premiums payable on energy transition bonds.

b. Any payment required under an ancillary agreement and any amount required to fund or replenish a reserve account or other accounts established under the terms of any indenture, ancillary agreement, or other financing documents pertaining to energy transition bonds.

c. Any other cost related to issuing, supporting, repaying, refunding, and servicing energy transition bonds, including, servicing fees, accounting and auditing fees, trustee fees, legal fees, consulting fees, structuring adviser fees, administrative fees, placement and underwriting fees, independent director and manager fees, capitalized interest, rating agency fees, stock exchange listing and compliance fees, security registration fees, filing fees, information technology programming costs, and any other costs necessary to otherwise ensure the timely payment of energy transition bonds or other amounts or charges payable in connection with the bonds, including costs related to obtaining the financing order.

d. Any taxes and license fees or other fees imposed on the revenues generated from the collection of the energy transition charge or otherwise resulting from the collection of energy transition charges, in any such case whether paid, payable, or accrued.

e. Any State and local taxes, franchise, gross receipts, and other taxes or similar charges, including regulatory assessment fees, whether paid, payable, or accrued.

f. Any costs incurred by the Commission or public staff for any outside consultants or counsel retained in connection with the securitization of energy transition costs, except as provided in subparagraph (d)(1)c.

(12) Financing order. – An order that authorizes the issuance of energy transition bonds; the imposition, collection, and periodic adjustments of an energy transition charge; the creation of energy transition property; and the sale, assignment, or transfer of energy transition property to an assignee.

(13) Financing party. – Bondholders and trustees, collateral agents, any party under an ancillary agreement, or any other person acting for the benefit of bondholders.

(14) Financing statement. – Defined in Article 9 of the Code.

(15) Pledgee. – A financing party to which a public utility or its successors or assignees mortgages, negotiates, pledges, or creates a security interest or lien on all or any portion of its interest in or right to energy transition property.

(16) Public utility. – A public utility, as defined in G.S. 62-3, that sells electric power to retail electric customers in the State.

(b) Financing Orders. –

(1) A public utility may petition the Commission for a financing order. The petition shall include all of the following:

a. The energy transition costs incurred by the utility and an estimate of the costs that are being undertaken but are not completed.

OFFICIAL COPY
Sep 02 2023

b. A statement of whether the public utility proposes to finance all or a portion of the energy transition costs using energy transition bonds. If the public utility proposes to finance a portion of the costs, the public utility must identify the specific portion in the petition. By electing not to finance a portion of such energy transition costs using energy transition bonds, a public utility shall not be deemed to waive its right to recover such costs pursuant to a separate proceeding with the Commission.

c. A proposed amount, for Commission consideration, to be included in energy transition costs for use as transition assistance for workers and local governments negatively affected by the retirement of an electric generating facility.

d. An estimate of the financing costs related to the energy transition bonds.

e. An estimate of the energy transition charges necessary to recover the energy transition costs and financing costs and the proposed period for recovery of such costs.

f. An estimate of the quantifiable customer securitization savings resulting from the use of energy transition bonds instead of traditional cost recovery methods.

g. Direct testimony and exhibits supporting the petition.

(2) If a public utility is subject to a settlement agreement that governs the type and amount of costs that could be included in energy transition costs and the public utility proposes to finance all or a portion of the costs using energy transition bonds, then the public utility must file a petition with the Commission for review and approval of those costs no later than 90 days before filing a petition for a financing order pursuant to this section.

(3) Petition and order. –

a. Proceedings on a petition submitted pursuant to this subdivision begin with the petition by a public utility, filed subject to the time frame specified in subdivision (2) of this subsection, if applicable, and shall be disposed of in accordance with the requirements of this Chapter and the rules of the Commission, except as follows:

1. Within 14 days after the date the petition is filed, the Commission shall establish a procedural schedule that permits a Commission decision no later than 210 days after the date the petition is filed.

2. No later than 210 days after the date the petition is filed, the Commission shall issue a financing order or an order rejecting the petition. A party to the Commission proceeding may petition the Commission for reconsideration of the financing order within five days after the date of its issuance.

b. A financing order issued by the Commission to a public utility shall include all of the following elements:

1. Except for changes made pursuant to the formula-based mechanism authorized under this section, the amount of energy transition costs to be financed using energy transition

OFFICIAL COPY
Sep 02 2023

bonds. The Commission shall describe and estimate the amount of financing costs that may be recovered through energy transition charges and specify the period over which energy transition costs and financing costs may be recovered.

2. A finding that the proposed issuance of energy transition bonds and the imposition and collection of an energy transition charge are expected to provide quantifiable benefits to customers as compared to the costs that would have been incurred absent the issuance of energy transition bonds and a statement of the net present value of those benefits to customers.

3. A finding that the structuring and pricing of the energy transition bonds are reasonably expected to result in the lowest energy transition charges consistent with market conditions at the time the energy transition bonds are priced, and with the terms set forth in such financing order.

4. A determination of the portion, up to 15%, of the customer securitization savings that shall be included in transition bond costs and used to provide transition assistance to workers and local governments negatively affected by the retirement of the electric generating facility.

5. A requirement that, for so long as the energy transition bonds are outstanding and until all financing costs have been paid in full, the imposition and collection of energy transition charges authorized under a financing order shall be nonbypassable and paid by all existing and future retail customers receiving transmission or distribution service, or both, from the public utility or its successors or assignees under Commission-approved rate schedules or under special contracts, even if a customer elects to purchase electricity from an alternative electric supplier following a fundamental change in regulation of public utilities in this State.

6. A formula-based true-up mechanism for making, at least annually, expeditious periodic adjustments in the energy transition charges that customers are required to pay pursuant to the financing order and for making any adjustments that are necessary to correct for any overcollection or undercollection of the charges or to otherwise ensure the timely payment of energy transition bonds and financing costs and other required amounts and charges payable in connection with the energy transition bonds.

7. The energy transition property that is, or shall be, created in favor of a public utility or its successors or assignees and that shall be used to pay or secure energy transition bonds and all financing costs.

8. The degree of flexibility to be afforded to the public utility in

OFFICIAL COPY
Sep 01 2023

establishing the terms and conditions of the energy transition bonds, including, but not limited to, repayment schedules, expected interest rates, and other financing costs.

9. How energy transition charges will be allocated among customer classes.

10. A requirement that, after the final terms of an issuance of energy transition bonds have been established and before the issuance of energy transition bonds, the public utility determines the resulting initial energy transition charge in accordance with the financing order and that such initial energy transition charge be final and effective upon the issuance of such energy transition bonds without further Commission action so long as the energy transition charge is consistent with the financing order.

11. A requirement that the applicant public utility, simultaneously with the inception of the collection of energy transition charges, reduce its rates through a reduction in base rates or by a negative rider on customer bills in an amount equal to the revenue requirement associated with the utility assets being financed by energy transition bonds

12. A method of tracing funds collected as energy transition charges, or other proceeds of energy transition property, and determine that such method shall be deemed the method of tracing such funds and determining the identifiable cash proceeds of any energy transition property subject to a financing order under applicable law.

13. Any other conditions not otherwise inconsistent with this section that the Commission determines are appropriate.

c. A financing order issued to a public utility may provide that creation of the public utility's energy transition property is conditioned upon, and simultaneous with, the sale or other transfer of the energy transition property to an assignee and the pledge of the energy transition property to secure energy transition bonds.

d. If the Commission issues a financing order, the public utility shall file with the Commission at least annually a petition or a letter applying the formula-based mechanism and, based on estimates of consumption for each rate class and other mathematical factors, requesting administrative approval to make the applicable adjustments. The review of the filing shall be limited to determining whether there are any mathematical or clerical errors in the application of the formula-based mechanism relating to the appropriate amount of any overcollection or undercollection of energy transition charges and the amount of an adjustment. The adjustments shall ensure the recovery of revenues sufficient to provide for the payment of principal, interest, acquisition, defeasance, financing costs, or redemption premium and other fees, costs, and charges in respect of energy transition bonds

OFFICIAL COPY
Sep 01 2023

approved under the financing order. Within 30 days after receiving a public utility's request pursuant to this paragraph, the Commission shall either approve the request or inform the public utility of any mathematical or clerical errors in its calculation. If the Commission informs the utility of mathematical or clerical errors in its calculation, the utility may correct its error and refile its request. The time frames previously described in this paragraph shall apply to a refiled request.

e. Subsequent to the transfer of energy transition property to an assignee or the issuance of energy transition bonds authorized thereby, whichever is earlier, a financing order is irrevocable and, except for changes made pursuant to the formula-based mechanism authorized in this section, the Commission may not amend, modify, or terminate the financing order by any subsequent action or reduce, impair, postpone, terminate, or otherwise adjust energy transition charges approved in the financing order. After the issuance of a financing order, the public utility retains sole discretion regarding whether to assign, sell, or otherwise transfer energy transition property or to cause energy transition bonds to be issued, including the right to defer or postpone such assignment, sale, transfer, or issuance.

f. Transition assistance funds, if included in the bond issue, may be transferred to a third-party entity designated by the commission to administer transition assistance on behalf of displaced workers and affected communities.

(4) At the request of a public utility, the Commission may commence a proceeding and issue a subsequent financing order that provides for refinancing, retiring, or refunding the energy transition bonds issued pursuant to the original financing order if the Commission finds that the subsequent financing order satisfies all of the criteria specified in this section for a financing order. Effective upon retirement of the refunded energy transition bonds and the issuance of new energy transition bonds, the Commission shall adjust the related energy transition charges accordingly.

(5) Within 60 days after the Commission issues a financing order or a decision denying a request for reconsideration or, if the request for reconsideration is granted, within 30 days after the Commission issues its decision on reconsideration, an adversely affected party may petition for judicial review in the Supreme Court of North Carolina. Review on appeal shall be based solely on the record before the Commission and briefs to the court and is limited to determining whether the financing order, or the order on reconsideration, conforms to the State Constitution and State and federal law and is within the authority of the Commission under this section.

(6) Duration of financing order. –

a. A financing order remains in effect and energy transition property under the financing order continues to exist until energy transition bonds issued pursuant to the financing order have been paid in full or defeased and, in each case, all Commission-approved financing costs of such energy transition bonds have been recovered in full.

b. A financing order issued to a public utility remains in effect and

OFFICIAL COPY
Sep 02 2023

unabated notwithstanding the reorganization, bankruptcy or other insolvency proceedings, merger, or sale of the public utility or its successors or assignees.

(c) Exceptions to Commission Jurisdiction. –

(1) The Commission may not, in exercising its powers and carrying out its duties regarding any matter within its authority pursuant to this Chapter, consider the energy transition bonds issued pursuant to a financing order to be the debt of the public utility other than for federal income tax purposes, consider the energy transition charges paid under the financing order to be the revenue of the public utility for any purpose, or consider the energy transition costs or financing costs specified in the financing order to be the costs of the public utility, nor may the Commission determine any action taken by a public utility which is consistent with the financing order to be unjust or unreasonable.

(2) The Commission may not order or otherwise directly or indirectly require a public utility to use energy transition bonds to finance any project, addition, plant, facility, extension, capital improvement, equipment, or any other expenditure. After the issuance of a financing order, the public utility retains sole discretion regarding whether to cause the energy transition bonds to be issued, including the right to defer or postpone such sale, assignment, transfer, or issuance. Nothing shall prevent the public utility from abandoning the issuance of energy transition bonds under the financing order by filing with the Commission a statement of abandonment and the reasons therefor. The Commission may not refuse to allow a public utility to recover energy transition costs in an otherwise permissible fashion, or refuse or condition authorization or approval of the issuance and sale by a public utility of securities or the assumption by the public utility of liabilities or obligations, solely because of the potential availability of energy transition bond financing.

(d) Public Utility Duties. –

(1) The electric bills of a public utility that has obtained a financing order and caused energy transition bonds to be issued must comply with the provisions of this subsection; however, the failure of a public utility to comply with this subsection does not invalidate, impair, or affect any financing order, energy transition property, energy transition charge, or energy transition bonds. The public utility must do the following:

a. Explicitly reflect that a portion of the charges on such bill represents energy transition charges approved in a financing order issued to the public utility and, if the energy transition property has been transferred to an assignee, must include a statement to the effect that the assignee is the owner of the rights to energy transition charges and that the public utility or other entity, if applicable, is acting as a collection agent or servicer for the assignee. The tariff applicable to customers must indicate the energy transition charge and the ownership of the charge.

b. Include the energy transition charge on each customer's bill as a

OFFICIAL COPY
Sep 02 2023

separate line item and include both the rate and the amount of the charge on each bill.

c. If a public utility's petition for a financing order is denied or withdrawn or for any reason no energy transition bonds are issued, any costs of retaining expert consultants and counsel on behalf of the commission or the public staff, as authorized by Section and approved by the commission, shall be paid by the applicant public utility and shall be eligible for recovery by the public utility, including carrying costs, in the electric utility's future rates.

(e) Energy transition Property. –

(1) Provisions applicable to energy transition property. –

a. All energy transition property that is specified in a financing order constitutes an existing, present intangible property right or interest therein, notwithstanding that the imposition and collection of energy transition charges depends on the public utility, to which the financing order is issued, performing its servicing functions relating to the collection of energy transition charges and on future electricity consumption. The property exists (i) regardless of whether or not the revenues or proceeds arising from the property have been billed, have accrued, or have been collected and (ii) notwithstanding the fact that the value or amount of the property is dependent on the future provision of service to customers by the public utility or its successors or assignees and the future consumption of electricity by customers.

b. Energy transition property specified in a financing order exists until energy transition bonds issued pursuant to the financing order are paid in full and all financing costs and other costs of such energy transition bonds have been recovered in full.

c. All or any portion of energy transition property specified in a financing order issued to a public utility may be transferred, sold, conveyed, or assigned to a successor or assignee that is wholly owned, directly or indirectly, by the public utility and created for the limited purpose of acquiring, owning, or administering energy transition property or issuing energy transition bonds under the financing order. All or any portion of energy transition property may be pledged to secure energy transition bonds issued pursuant to the financing order, amounts payable to financing parties and to counterparties under any ancillary agreements, and other financing costs. Any transfer, sale, conveyance, assignment, grant of a security interest in or pledge of energy transition property by a public utility, or an affiliate of the public utility, to an assignee, to the extent previously authorized in a financing order, does not require the prior consent and approval of the Commission.

d. If a public utility defaults on any required payment of charges arising from energy transition property specified in a financing order, a court, upon application by an interested party, and without limiting any other

OFFICIAL COPY
Sep 01 2023

remedies available to the applying party, shall order the sequestration and payment of the revenues arising from the energy transition property to the financing parties or their assignees. Any such financing order remains in full force and effect notwithstanding any reorganization, bankruptcy, or other insolvency proceedings with respect to the public utility or its successors or assignees.

e. The interest of a transferee, purchaser, acquirer, assignee, or pledgee in energy transition property specified in a financing order issued to a public utility, and in the revenue and collections arising from that property, is not subject to setoff, counterclaim, surcharge, or defense by the public utility or any other person or in connection with the reorganization, bankruptcy, or other insolvency of the public utility or any other entity.

f. Any successor to a public utility, whether pursuant to any reorganization, bankruptcy, or other insolvency proceeding or whether pursuant to any merger or acquisition, sale, or other business combination, or transfer by operation of law, as a result of public utility restructuring or otherwise, must perform and satisfy all obligations of, and have the same rights under a financing order as, the public utility under the financing order in the same manner and to the same extent as the public utility, including collecting and paying to the person entitled to receive the revenues, collections, payments, or proceeds of the energy transition property. Nothing in this sub-subdivision is intended to limit or impair any authority of the Commission concerning the transfer or succession of interests of public utilities.

g. Energy transition bonds shall be nonrecourse to the credit or any assets of the public utility other than the energy transition property as specified in the financing order and any rights under any ancillary agreement.

(2) Provisions applicable to security interests. –

a. The creation, perfection, and enforcement of any security interest in energy transition property to secure the repayment of the principal and interest and other amounts payable in respect of energy transition bonds; amounts payable under any ancillary agreement and other financing costs are governed by this subsection and not by the provisions of the Code.

b. A security interest in energy transition property is created, valid, and binding and perfected at the later of the time: (i) the financing order is issued, (ii) a security agreement is executed and delivered by the debtor granting such security interest, (iii) the debtor has rights in such energy transition property or the power to transfer rights in such energy transition property, or (iv) value is received for the energy transition property. The description of energy transition property in a security agreement is sufficient if the description refers to this section and the financing order creating the energy transition property.

OFFICIAL COPY

Sept 02 2023

c. A security interest shall attach without any physical delivery of collateral or other act, and, upon the filing of a financing statement with the office of the Secretary of State, the lien of the security interest

OFFICIAL COPY
Sep 01 2023

shall be valid, binding, and perfected against all parties having claims of any kind in tort, contract, or otherwise against the person granting the security interest, regardless of whether the parties have notice of the lien. Also upon this filing, a transfer of an interest in the energy transition property shall be perfected against all parties having claims of any kind, including any judicial lien or other lien creditors or any claims of the seller or creditors of the seller, and shall have priority over all competing claims other than any prior security interest, ownership interest, or assignment in the property previously perfected in accordance with this section.

d. The Secretary of State shall maintain any financing statement filed to perfect any security interest under this section in the same manner that the Secretary maintains financing statements filed by transmitting utilities under the Code. The filing of a financing statement under this section shall be governed by the provisions regarding the filing of financing statements in the Code.

e. The priority of a security interest in energy transition property is not affected by the commingling of energy transition charges with other amounts. Any pledgee or secured party shall have a perfected security interest in the amount of all energy transition charges that are deposited in any cash or deposit account of the qualifying utility in which energy transition charges have been commingled with other funds and any other security interest that may apply to those funds shall be terminated when they are transferred to a segregated account for the assignee or a financing party.

f. No application of the formula-based adjustment mechanism as provided in this section will affect the validity, perfection, or priority of a security interest in or transfer of energy transition property.

g. If a default or termination occurs under the energy transition bonds, the financing parties or their representatives may foreclose on or otherwise enforce their lien and security interest in any energy transition property as if they were secured parties with a perfected and prior lien under the Code, and the Commission may order amounts arising from energy transition charges be transferred to a separate account for the financing parties' benefit, to which their lien and security interest shall apply. On application by or on behalf of the financing parties, the Superior Court of Wake County shall order the sequestration and payment to them of revenues arising from the energy transition charges.

(3) Provisions applicable to the sale, assignment, or transfer of energy transition property. –

a. Any sale, assignment, or other transfer of energy transition property shall be an absolute transfer and true sale of, and not a pledge of or secured transaction relating to, the seller's right, title, and interest in, to, and under the energy transition property if the documents governing the transaction expressly state that the transaction is a sale or other absolute transfer other than for federal and State income tax purposes. For all purposes other than federal and State income tax purposes, the parties' characterization of a transaction as a sale of an interest in energy transition property shall be conclusive that the transaction is a true sale and that ownership has passed to the party

OFFICIAL COPY
Sep 01 2023

characterized as the purchaser, regardless of whether the purchaser has possession of any documents evidencing or pertaining to the interest. A transfer of an interest in energy transition property may be created only when all of the following have occurred: (i) the financing order creating the energy transition property has become effective, (ii) the documents evidencing the transfer of energy transition property have been executed by the assignor and delivered to the assignee, and (iii) value is received for the energy transition property. After such a transaction, the energy transition property is not subject to any claims of the transferor or the transferor's creditors, other than creditors holding a prior security interest in the energy transition property perfected in accordance with subdivision (2) of subsection (e) of this section.

b. The characterization of the sale, assignment, or other transfer as an absolute transfer and true sale and the corresponding characterization of the property interest of the purchaser, shall not be affected or impaired by the occurrence of any of the following factors:

1. Commingling of energy transition charges with other amounts.
2. The retention by the seller of (i) a partial or residual interest, including an equity interest, in the energy transition property, whether direct or indirect, or whether subordinate or otherwise, or (ii) the right to recover costs associated with taxes, franchise fees, or license fees imposed on the collection of energy transition charges.
3. Any recourse that the purchaser may have against the seller.
4. Any indemnification rights, obligations, or repurchase rights made or provided by the seller.
5. The obligation of the seller to collect energy transition charges on behalf of an assignee.
6. The transferor acting as the servicer of the energy transition charges or the existence of any contract that authorizes or requires the public utility, to the extent that any interest in energy transition property is sold or assigned, to contract with the assignee or any financing party that it will continue to operate its system to provide service to its customers, will collect amounts in respect of the energy transition charges for the benefit and account of such assignee or financing party, and will account for and remit such amounts to or for the account of such assignee or financing party.
7. The treatment of the sale, conveyance, assignment, or other transfer for tax, financial reporting, or other purposes.
8. The granting or providing to bondholders a preferred right to the energy transition property or credit enhancement by the public utility or its affiliates with respect to such energy transition bonds.
9. Any application of the formula-based adjustment mechanism as provided in this section.

c. Any right that a public utility has in the energy transition property before its pledge, sale, or transfer or any other right created under this section or created in the financing order and assignable under this section or assignable pursuant to a financing order is property in the form of a contract right or a chose in action. Transfer of an interest in energy transition property to an assignee is enforceable only upon the later of

OFFICIAL COPY
Sep 01 2023

(i) the issuance of a financing order, (ii) the assignor having rights in such energy transition property or the power to transfer rights in such energy transition property to an assignee, (iii) the execution and delivery by the assignor of transfer documents in connection with the issuance of energy transition bonds, and (iv) the receipt of value for the energy transition property. An enforceable transfer of an interest in energy transition property to an assignee is perfected against all third parties, including subsequent judicial or other lien creditors, when a notice of that transfer has been given by the filing of a financing statement in accordance with sub-subdivision c. of subdivision (2) of this subsection. The transfer is perfected against third parties as of the date of filing.

d. The Secretary of State shall maintain any financing statement filed to perfect any sale, assignment, or transfer of energy transition property under this section in the same manner that the Secretary maintains financing statements filed by transmitting utilities under the Code. The filing of any financing statement under this section shall be governed by the provisions regarding the filing of financing statements in the Code. The filing of such a financing statement is the only method of perfecting a transfer of energy transition property.

e. The priority of a transfer perfected under this section is not impaired by any later modification of the financing order or energy transition property or by the commingling of funds arising from energy transition property with other funds. Any other security interest that may apply to those funds, other than a security interest perfected under subdivision (2) of this subsection, is terminated when they are transferred to a segregated account for the assignee or a financing party. If energy transition property has been transferred to an assignee or financing party, any proceeds of that property must be held in trust for the assignee or financing party.

f. The priority of the conflicting interests of assignees in the same interest or rights in any energy transition property is determined as follows:

1. Conflicting perfected interests or rights of assignees rank according to priority in time of perfection. Priority dates from the time a filing covering the transfer is made in accordance with sub-subdivision c. of subdivision (2) of this subsection.
2. A perfected interest or right of an assignee has priority over a conflicting unperfected interest or right of an assignee.
3. A perfected interest or right of an assignee has priority over a person who becomes a lien creditor after the perfection of such assignee's interest or right.

(f) Description or Indication of Property. – The description of energy transition property being transferred to an assignee in any sale agreement, purchase agreement, or other transfer agreement, granted or pledged to a pledgee in any security agreement, pledge agreement, or other security document, or indicated in any financing statement is only sufficient if such description or indication refers to the financing order that created the energy transition property and states that the agreement or financing statement covers

OFFICIAL COPY
Sep 01 2023

all or part of the property described in the financing order. This section applies to all purported transfers of, and all purported grants or liens or security interests in, energy transition property, regardless of whether the related sale agreement, purchase agreement, other transfer agreement, security agreement, pledge agreement, or other security document was entered into, or any financing statement was filed.

(g) Financing Statements. – All financing statements referenced in this section are subject to Part 5 of Article 9 of the Code, except that the requirement as to continuation statements does not apply.

(h) Choice of Law. – The law governing the validity, enforceability, attachment, perfection, priority, and exercise of remedies with respect to the transfer of an interest or right or the pledge or creation of a security interest in any energy transition property shall be the laws of this State.

(i) Energy transition Bonds Not Public Debt. – Neither the State nor its political subdivisions are liable on any energy transition bonds, and the bonds are not a debt or a general obligation of the State or any of its political subdivisions, agencies, or instrumentalities, nor are they special obligations or indebtedness of the State or any agency or political subdivision. An issue of energy transition bonds does not, directly, indirectly, or contingently, obligate the State or any agency, political subdivision, or instrumentality of the State to levy any tax or make any appropriation for payment of the energy transition bonds, other than in their capacity as consumers of electricity. All energy transition bonds must contain on the face thereof a statement to the following effect: "Neither the full faith and credit nor the taxing power of the State of North Carolina is pledged to the payment of the principal of, or interest on, this bond."

(j) Legal Investment. – All of the following entities may legally invest any sinking funds, moneys, or other funds in energy transition bonds:

(1) Subject to applicable statutory restrictions on State or local investment authority, the State, units of local government, political subdivisions, public bodies, and public officers, except for members of the Commission.

(2) Banks and bankers, savings and loan associations, credit unions, trust companies, savings banks and institutions, investment companies, insurance companies, insurance associations, and other persons carrying on a banking or insurance business.

(3) Personal representatives, guardians, trustees, and other fiduciaries.

(4) All other persons authorized to invest in bonds or other obligations of a similar nature.

(k) Obligation of Nonimpairment. –

(1) The State and its agencies, including the Commission, pledge and agree with bondholders, the owners of the energy transition property, and other financing parties that the State and its agencies will not take any action listed in this subdivision. This paragraph does not preclude limitation or alteration if full compensation is made by law for the full protection of the energy transition charges collected pursuant to a financing order and of the bondholders and any assignee or financing party entering into a contract with the public utility. The prohibited actions are as follows:

a. Alter the provisions of this section, which authorize the Commission to create an irrevocable contract right or chose in action by the issuance of a financing order, to create energy transition property, and make the energy transition charges imposed by a financing order irrevocable, binding, or nonbypassable charges.

OFFICIAL COPY

Sept 02 2023

b. Take or permit any action that impairs or would impair the value of energy transition property or the security for the energy transition bonds or revises the energy transition costs for which recovery is authorized.

c. In any way impair the rights and remedies of the bondholders, assignees, and other financing parties.

OFFICIAL COPY
Sep 01 2023

d. Except for changes made pursuant to the formula-based adjustment mechanism authorized under this section, reduce, alter, or impair energy transition charges that are to be imposed, billed, charged, collected, and remitted for the benefit of the bondholders, any assignee, and any other financing parties until any and all principal, interest, premium, financing costs and other fees, expenses, or charges incurred, and any contracts to be performed, in connection with the related energy transition bonds have been paid and performed in full.

(2) Any person or entity that issues energy transition bonds may include the language specified in this subsection in the energy transition bonds and related documentation.

(l) Not a Public Utility. – An assignee or financing party is not a public utility or person providing electric service by virtue of engaging in the transactions described in this section.

(m) Conflicts. – If there is a conflict between this section and any other law regarding the attachment, assignment, or perfection, or the effect of perfection, or priority of, assignment or transfer of, or security interest in energy transition property, this section shall govern.

(n) Consultation. – In making determinations under this section, the Commission or public staff or both may engage an outside consultant and counsel.

(o) Effect of Invalidity. – If any provision of this section is held invalid or is invalidated, superseded, replaced, repealed, or expires for any reason, that occurrence does not affect the validity of any action allowed under this section which is taken by a public utility, an assignee, a financing party, a collection agent, or a party to an ancillary agreement; and any such action remains in full force and effect with respect to all energy transition bonds issued or authorized in a financing order issued under this section before the date that such provision is held invalid or is invalidated, superseded, replaced, or repealed, or expires for any reason."

(p) **Conditions for selecting replacement capacity and energy [DISCLAIMER: This section received support by the majority, but not by all NERP participants.]**

(1) the public utility shall employ a competitive bidding process, approved by the commission as to its structure, to procure energy resources required to fill the resource need resulting from the closure of generating facilities under this Section.

(2) The Commission may permit the utility or its affiliates to compete in the bidding process and own a portion of the replacement resources, including associated infrastructure, if the Commission finds –

a. The utility bids were evaluated in the same manner as other bids;
b. the cost of utility or affiliate ownership of the replacement resources is reasonable and is the least cost choice, with an acceptable rate impact; and
c. that utility ownership of replacement resources is necessary to assure the utility's financial health.

(3) Utility ownership may consist of utility or affiliate self-builds, build-transfers from independent power producers, or sales of existing assets from independent power producers or similar commercial arrangements.

(4) In determining whether to approve proposed replacement resources, the Commission shall consider –

OFFICIAL COPY
Sep 02 2023

a. the risk that future federal environmental regulations could increase the life-cycle cost of the resource and create future stranded assets; and
b. whether the proposed replacement resources support the state's energy goals, as expressed by the governor and the legislature.

SECTION 2. G.S. 25-9-109(d) reads as rewritten:

"(d) Inapplicability of Article. – This Article does not apply to:

…

(13) An assignment of a deposit account in a consumer transaction, but G.S. 25-9-315 and G.S. 25-9-322 apply with respect to proceeds and priorities in proceeds; ~~or~~

(14) The creation, perfection, priority, or enforcement of any lien on, assignment of, pledge of, or security in, any revenues, rights, funds, or other tangible or intangible assets created, made, or granted by this State or a governmental unit in this State, including the assignment of rights as secured party in security interests granted by any party subject to the provisions of this Article to this State or a governmental unit in this State, to secure, directly or indirectly, any bond, note, other evidence of indebtedness, or other payment obligations for borrowed money issued by, or in connection with, installment or lease purchase financings by, this State or a governmental unit in this State. However, notwithstanding this subdivision, this Article does apply to the creation, perfection, priority, and enforcement of security interests created by this State or a governmental unit in this State in equipment or fixtures;
~~or~~

(15) The creation, perfection, priority, or enforcement of any sale, assignment of, pledge of, security interest in, or other transfer of, any interest or right or portion of any interest or right in any storm recovery property as defined G.S. 62-172;
"or

(16) The creation, perfection, priority, or enforcement of any sale, assignment of, pledge of, security interest in, or other transfer of, any interest or right or portion of any interest or right in any energy transition property as defined G.S. 62-173."

SECTION 3. This act is effective when it becomes law.

ABOUT THE NORTH CAROLINA ENERGY REGULATORY PROCESS

Governor Cooper's Executive Order 80 mandated the development of a clean energy plan for the state of North Carolina. The Clean Energy Plan recommended the launch of a stakeholder process to design policies that align regulatory incentives with 21st century public policy goals, customer expectations, utility needs, and technology innovation. The stakeholder process was launched in February 2020 and has led to policy proposals on energy reform.

About this document

The Competitive Procurement Subcommittee has evaluated a number of competitive procurement models across the country. Ultimately, the recent procurement cycle in Colorado for the Public Service Company of Colorado (Xcel Energy), offered a good example of a successful generation procurement framework. Based on such review, the Subcommittee supports the following policy recommendations details.

INTRODUCTION

Purpose

The purpose of this document is to communicate the findings of the NC Energy Regulatory Process (NERP) to the NC General Assembly and the NC Utilities Commission (NCUC), as the NCUC may determine it appropriate to consider competitive solicitations as an important tool to meet energy and capacity needs identified in an IRP.

The Competitive Procurement Subcommittee evaluated issues related to the use of competitive processes to meet demands of the recent procurement cycle in Colorado for the Public Service Company of Colorado (Xcel Energy). The Subcommittee determined the PSCo offered a good example of a successful generation procurement framework. Based on such review, the Subcommittee supports the following policy recommendations.

NERP Recommendations

Subject to the more detailed policy recommendations below, NERP has identified competitive solicitations as an important tool that should be utilized to meet energy and capacity needs identified in an IRP and as otherwise deemed appropriate by the North Carolina Utilities Commission ("Commission").

NERP also holds that State policy regarding utility competitive procurement should take into account unique characteristics of each utility service territory, e.g., number of customers, geographic size, amount of utility-owned generation in the service territory, and proportion of existing generation from renewable sources located in the service territory and serving utility customers.

Context and history

On October 29, 2018, Governor Roy Cooper issued *Executive Order 80: North Carolina's Commitment to Address Climate Change and Transition to a Clean Energy Economy*.[i] The Order established the North Carolina Climate Change Interagency Council and tasked the Department of Environmental Quality (DEQ) with producing a clean energy plan.

DEQ convened a group of stakeholders that met throughout 2019. In October 2019, DEQ released the *North Carolina Clean Energy Plan: Transitioning to a 21 Century Electricity System* (CEP).[ii] Recommendation B-1 of the CEP states: "Launch a NC energy process with representatives from key stakeholder groups to design policies that align regulatory incentives and processes with 21st Century public policy goals, customer expectations, utility needs, and technology innovation." That process was launched as NERP, which met throughout 2020.

NERP

The NERP, facilitated by Rocky Mountain Institute and the Regulatory Assistance Project, brought together roughly 40 diverse stakeholders to consider four main avenues of utility regulatory reform:

- PBR
- Wholesale market reform
- Competitive procurement of resources
- Accelerated retirement of generation assets

These stakeholders identified ten desired outcomes of reform in North Carolina, as shown below in Figure 1.

Outcome Category	Outcome
Improve customer value	Affordability and bill stability
	Reliability
	Customer choice of energy sources and programs
	Customer equity
Improve utility regulation	Regulatory incentives aligned with cost control and policy goals
	Administrative efficiency
Improve environmental quality	Integration of DERs
	Carbon neutral by 2050
Conduct a quality stakeholder process	Inclusive
	Results oriented

Figure 1: PRIORITY OUTCOMES IDENTIFIED BY NERP

Competitive Procurement Study Group

A subset of NERP participants volunteered to serve on a competitive procurement subcommittee. This group (see page 2 for a list of groups members) first met in the summer of 2020. The group met regularly to advance research into competitive markets mechanisms relevant to NC.

The study group presented a series of case studies and recommendations to the broader NERP group, detailing the potential implications of each market reform, and why further investigation into each reform is warranted. Feedback from NERP participants shaped the proposed markets outlined below.

NERP companion documents

NERP produced the following documents for dissemination, to inform subsequent policy discussions with various audiences:

1. ***Competitive Procurement Policy Recommendation for*** the North Carolina General Assembly:
   - An overall policy recommendation which, subject to the more detailed recommendations outlined in the document, states that competitive solicitations are an important tool that should be utilized to meet energy and capacity needs identified in an IRP and as otherwise deemed appropriate by the North Carolina Utilities Commission.

2. ***A Case Study into The Public Service Company of Colorado's Recent Procurement Cycle:***
   - The subcommittee evaluated a number of other states but focused primarily on a recent procurement cycle in Colorado for the Public Service Company of Colorado (Xcel Energy), which was ultimately determined to be a successful generation procurement framework.

3. ***A Case Study into Key Generation Procurements Enacted by the Virginia Clean Economy Act:***
   - The summary outlines the sweeping package of energy reforms established in March 2020 that set Virginia on a path toward a 100% carbon-free electricity grid by 2050.

DETAILED POLICY RECOMMENDATIONS

General principles

1. Competitive solicitations benefit customers by ensuring the most cost-effective generation resources are selected.
   a. Except where other policy considerations give rise to the need for resource-specific solicitations (as discussed further below), competitive generation solicitations should permit participation from all resources that satisfy the operational, reliability and other requirements sought in the RFP.
   b. Except where otherwise directed by statute, the Utility that is responsible for maintaining reliability should be also be responsible for defining the necessary operational, reliability and other requirements. It may be appropriate to require Commission oversight or approval of such parameters.

2. Independent oversight or administration should be utilized for all competitive generation procurement.
   a. The exact parameters of the independent oversight or administration may vary depending on the nature of the procurement.

3. In all competitive generation procurements, communications and separation protocols similar to CPRE should be implemented.

4. Consistent with the policy direction of numerous other states, there is value in diversity of generation ownership. A mixture of third-party ownership and utility rate-based ownership diversifies risk for customers and provides a variety of benefits.
   a. The appropriate allocation between utility and third-party ownership should be determined based on the particular context of the procurement and/or the type of generation resource.

OFFICIAL COPY
Sept 02 2023

b. It may be appropriate to determine the allocation between utility and third-party ownership on a technology-specific basis (*i.e.*, percentage allocations differ between solar, wind, storage, and gas).
c. Utility-owned, rate-based assets should be procured through competitive processes to ensure the most cost-effective resources are selected.
   - Maximum flexibility should be provided for such RFP and should allow for bids involving (A) sale of constructed assets, (B) Build Own Transfer ("BOT"), and (C) sale of development assets plus EPC.
d. Where a particular utility ownership target is established, it is generally preferable to procure utility-owned and rate-based assets through separate "silos."
e. No clear quantifiable basis for the allocation has been identified to date but parties should continue to work to identify quantitatively and qualitative factors that may inform the allocation, including (1) the potential loss of investment opportunity that might occur as a result of early retirement of coal assets and the potential need for replacement generation (depending on the nature of the cost recovery for any remaining NBV), (2) the examples of other states, or (3) impacts of any alternative ratemaking constructs.[iii]
f. Where the utility receives a significant ownership allocation, it may be reasonable and appropriate not to allow it and its affiliates to participate in the PPA procurement silo. In addition to creating equity between the utility and independent power producers, this would simplify oversight of the PPA procurement process.

5. A formal RFP should not be required in the case of uniquely advantageous opportunities, unexpected emergencies, pilot projects, or other circumstances identified by the Commission.

6. The appropriateness of utilizing an avoided price cost cap or other cost effectiveness parameters in the RFP evaluation process should be evaluated on a case-by-case basis to determine whether necessary in light of the nature or context of the RFP.

7. It may be appropriate to consider financial incentives to the utility in connection with third party PPAs in order to foster diversity of generation ownership.

8. Any state policy regarding utility competitive procurement should take into account unique characteristics of each utility service territory, e.g., number of customers, geographic size, amount of utility-owned generation in the service territory, and proportion of existing generation from renewable sources located in the service territory and serving utility customers.

Competitive Generation Procurement in Specific Scenarios

1. Competitive Solicitation: Connection between IRP – RFP

a. In the event that a specific capacity or energy need is identified in any IRP, such need should be filled through an all-source RFP that clearly defines the operational and other characteristics of the needed resource absent any unique circumstance as discussed above.

[iii] Examples:
- Colorado (Xcel) 2017 RFP: 50/50 split for renewable resources and 75/25 (utility/third party) split for dispatchable and semi-dispatchable resources to be added. Utility-owned assets are rate-based.
- Virginia (Dominion) Clean Energy Act: CEA provides for utility ownership of up to 75% utility ownership for solar and 65% for storage (and potentially up to 100%) by 2035. CEA enables Dominion to own 100% offshore wind (5.2GW by 2035) by demonstrating LCOE<1.4x that of gas. Utility-owned assets are rate-based.
- New Mexico (PNM) 2017 RFP: PNM owned 46% nameplate capacity of preferred portfolio from 2017 RFP. Utility-owned assets are rate-based.
- Michigan (CMS) 2019 RFP: Procurement split 50/50 between PPA and BTA utility-ownership. Utility-owned assets are rate-based.

OFFICIAL COPY
Sept 02 2023

b. The inputs and assumptions for any such RFP should be generally consistent with the most recent IRP but with updates as appropriate to reflect changing conditions.
c. It may be appropriate for the Commission to pre-approve inputs and other modeling assumption to be used in the evaluations.

2. Competitive Solicitation: Potential Coal Retirements

a. If determined to be reasonable as part of an IRP, the Commission should direct the utility to conduct one or more all source RFPs to assess whether particular coal units can be retired in a cost-effective manner (after accounting for recovery of the remaining NBV of such units in a manner deemed appropriate) through the procurement of replacement generation.

3. Competitive Solicitation: Future Clean Energy Standard or Renewable Energy Target

b. If future legislation or regulatory changes requires the procurement of additional renewable or low-carbon resources in order to comply with particular policy mandates or directives, resource-specific or otherwise more tailored competitive procurements may be needed.

NERP recommendations

NERP recommends that the North Carolina General Assembly expand existing procurement practices to utilize competitive procurement as a tool for State electric utilities to meet energy and capacity needs defined in their respective IRPs and where otherwise deemed appropriate by the NCUC.

NERP recommends that state policy regarding utility competitive procurement should take into account unique characteristics of each utility service territory, e.g., number of customers, geographic size, amount of utility-owned generation in the service territory, and proportion of existing generation from renewable sources located in the service territory and serving utility customers.

Competitive Procurement Outputs

NERP recommends that the North Carolina General Assembly expand existing procurement practices to utilize competitive procurement as a tool for State electric utilities to meet energy and capacity needs defined in their respective IRPs and where otherwise deemed appropriate by the NCUC.

a. Competitive procurement policy recommendation for the North Carolina General Assembly: An overall policy recommendation which, subject to the more detailed recommendations outlined in the document, states that competitive solicitations are an important tool that should be utilized to meet energy and capacity needs identified in an IRP and as otherwise deemed appropriate by the North Carolina Utilities Commission.
b. A case study into the Public Service Company of Colorado's recent procurement cycle:
c. A case study into key generation procurements enacted by the Virginia Clean Economy Act: The summary outlines the sweeping package of energy reforms established in March 2020 that set Virginia on a path toward a 100% carbon-free electricity grid by 2050.

OFFICIAL COPY

NERP CASE STUDY

COLORADO ELECTRIC RESOURCE PLAN

A CASE STUDY PRODUCED BY THE COMPETITIVE PROCUREMENT STUDY GROUP

The 2020 North Carolina Energy Regulatory Process identified competitive solicitations as an important tool that should be utilized to meet energy and capacity needs

WHAT ARE COMPETITIVE SOLICITATIONS?

NERP has defined competitive procurement as an Integrated Resource Plan (IRP) -driven, all-source procurement to meet all identified needs for new resources in a manner that is consistent with policy directives and at the best available overall price.

WHAT IS THE COLORADO ELECTRIC RESOURCE PLAN?

- Similar to the IRP process in NC, the electric resource plan (ERP) is how the Public Service Company of Colorado (Xcel Energy, or, referred to as PSCo) forecast and plan to meet customer needs.[1]
- Key provisions include ensuring power reliability, cost effective power delivery, increasing clean energy generation, planning for a grid flexibility, and supporting Colorado's energy and economic needs.

OVERVIEW

The Public Service Company of Colorado's (PSCo) request for proposals process (RFP) is inextricably linked to PSCo's (ERP). Therefore, the RFP process must be understood within the context of the overall ERP. This includes broader policy issues and consensus stipulation informing both the design of the RFP and the selection of generation resources.

The Subcommittee evaluated a number of states but focused primarily on the recent procurement cycle in Colorado for the Public Service Company of Colorado (Xcel Energy), as the Subcommittee viewed it as a good example of a successful generation procurement framework. The timeline and process of the 2017 ERP/RFP process is outlined below:

1. **Phase 1 Decision**
2. **Stipulation**
3. **Phase 2 Decision**

Following the process details, the subcommittee outlines a list of key items of relevance to NERP stakeholders and the NC community.

[1] https://www.xcelenergy.com/staticfiles/xe/PDF/Electric%20Resource%20Plan%20Fact%20Sheet.pdf

OFFICIAL COPY
Sept 02 2023

PROCESS TIMELINE AND KEY DETAILS

1. **Phase 1 Decision – April 28, 2017**

   a. Approved two resource scenarios (0 MW resource need and second scenario showing approximately 400 MW of need based on updated load forecast)
      i These two resource scenarios drove the structure of the RFP

   b. Approved evaluation methodology, including the inputs and assumptions to bid evaluation models (e.g., natural gas prices, coal prices, carbon costs, discount rates, and integration costs for intermittent resources).
      i Importantly, Colorado commission approved use of carbon price for modeling purposes.

   c. Confirmed IE's role which was primarily:
      i Provide a report to the Commission, containing an analysis of whether Public Service conducted a fair bid solicitation and bid evaluation process, with any deficiencies specified in the report.
      ii Review the inputs and outputs from the bid evaluation modeling, including in the report an assessment as to whether the resulting outputs are feasible, and alerting the Commission and parties through the report where there may be deficiencies in the outputs.

2. **Stipulation – August 29, 2017**
   a. Stipulation reached between PSCo and diverse set of stakeholders.

   b. Specified that PS would model a third resource scenario—the CEP Portfolio, which involves retirement of two coal units (Comanche 1 and 2).
      i The Company would compare the costs of the CEP Portfolio against a baseline portfolio, where Comanche 1 and 2 are not retired early, to determine the cost-effectiveness of the CEP Portfolio.
         ○ If the CEP Portfolio keeps customers "neutral" or results in savings for customers on a present value basis, the Stipulation proposed that Public Service would present the CEP Portfolio(s) in its ERP Phase II 120-Day Report.

   c. Stipulation specified utility ownership of a portion of resources.
      i 50% of the renewable resources to be added, and 75% of the dispatchable and semi-dispatchable resources to be added.
      ii PS Co also agreed not to bid into the CEP any new self-build projects other than for gas-fired projects.

WHY ISSUE AN RFP?

1. **Identified Capacity/Energy**
   a. Colorado had a potential identified capacity/energy need based solely on project load growth and an alternative capacity/energy need based on potential coal retirement (CEP Portfolio from Stipulation)

Discussion Item:

Should future RFPs be designed to test the market to see whether new generation could be procured to cost-effectively replace particular coal generation?

   b. Comparison to IRP/CPRE:
      i Duke IRP does not lead directly into RFP where resource need is identified.
      ii CPRE procurements were not tied to IRP.

2. **Targeted Renewable Amounts - CPRE / REPs approach.**

Discussion Item:

What is the regulatory/policy basis for any targeted amounts apart from identified need?

3. **Is there flexibility for the utility in unique situations?**
   a. Colorado ERP rules provide flexibility to the utility if competitive solicitation process is perhaps not needed in unique situations. (See 4 CCR 723-3(g)(II)(A)-(B)).

STRUCTURE OF RFP MECHANICS

1. **What is the role of the IE?**
   a. Comparison to CPRE:
      i Role of IE in Colorado RFP was substantially different than role of IA in CPRE
         ○ Utility was primarily responsible for defining technical needs, structuring evaluation methodology (subject to Commission approval) and performing evaluation of bids
         ○ The IE provided oversight, vetted evaluation models and tested results.

   b. Communication restrictions:
      i Comparison to CPRE: Separation Protocols were consistent with CPRE with the exception of evaluation issues.

OFFICIAL COPY
Sept 02 2023

STRUCTURE OF RFP MODELING

1. Avoided Cost Caps

Discussion Item:

In what types of RFPs does it make sense to utilize avoided cost cap?

a. Comparison to CPRE:
   i No avoided cost cap used because resources were being procured to replace existing generation.

b. Does the analysis assume a carbon cost?
   i Colorado ERP regulations permitted inclusion of carbon cost in analysis (4 CCR 723-3(g)(III)(C)(i)).

Discussion Item:

Is NCUC or General Assembly authorization required for future RFP to assume carbon price during selection?

c. In the case of consideration of early retirement, what assumptions are made about future revenue requirements?

UTILITY OWNERSHIP

1. Colorado stipulation, agreed to by diverse set of stakeholders, contemplated 50% utility, rate-based ownership of renewable resources and 75% utility, rate-based ownership of dispatchable resources (gas/storage).

2. Colorado Commission expressly recognized benefits of balance of utility-ownership and third-party ownership (consistent with past precedent).

3. Allowed for rate-base recovery of utility-owned assets.

WHAT IS BEING RECOMMENDED?

The North Carolina Energy Regulatory Process recommends that the North Carolina General Assembly expand existing procurement practices to utilize competitive procurement as a tool for State electric utilities to meet energy and capacity needs defined in their respective IRPs and where otherwise deemed appropriate by the NCUC.

NERP recommends that state policy regarding utility competitive procurement should take into account unique characteristics of each utility service territory, e.g., number of customers, geographic size, amount of utility-owned generation in the service territory, and proportion of existing generation from renewable sources located in the service territory and serving utility customers.

NERP produced the following documents for dissemination, to inform subsequent policy discussions with various audiences:

1. Competitive procurement policy recommendation for the North Carolina General Assembly.

2. A case study into key generation procurements enacted by the Virginia Clean Economy Act.

3. This case study into the PSCo recent procurement cycle

This fact sheet represents the work of stakeholders as of 12/18/2020.

About the North Carolina Energy Regulatory Process

Governor Cooper's Executive Order 80 mandated the development of a clean energy plan for the state of North Carolina. The Clean Energy Plan recommended the launch of a stakeholder process to design policies that align regulatory incentives with 21st century public policy goals, customer expectations, utility needs, and technology innovation. The stakeholder process was launched in February 2020 and has led to policy proposals on energy reform.

NERP CASE STUDY

VIRGINIA CLEAN ECONOMY ACT GENERATION PROCUREMENT

A CASE STUDY PRODUCED BY THE COMPETITIVE PROCUREMENT STUDY GROUP

The 2020 North Carolina Energy Regulatory Process identified competitive solicitations as an important tool that should be utilized to meet energy and capacity needs

WHAT ARE COMPETITIVE SOLICITATIONS?

NERP has defined competitive procurement as an Integrated Resource Plan (IRP) -driven, all-source procurement to meet all identified needs for new resources in a manner that is consistent with policy directives and at the best available overall price.

WHAT IS THE VIRGINIA CLEAN ECONOMY ACT?

- On March 5, 2020, the Virginia legislature passed the Virginia Clean Economy Act ("VCEA"), a sweeping package of energy legislation that sets Virginia on a path toward a 100% carbon-free electricity grid by 2050.[1]
- The following is a summary of the key generation procurement elements of the VCEA.

OVERVIEW

1. Renewable Portfolio Standard ("RPS") mandating 100% renewable energy by 2045 for Dominion Energy with, annual increases of 3%-4% per year according to a defined schedule, including the following (Va. Code § 56-585.5(C)):
   - 14% by 2021
   - 41% by 2030
   - 59% by 2035
   - 79% by 2040
   - 100% by 2045
2. Beginning 2025 and thereafter, at least 75% of all RECs used by Dominion Energy in a compliance period shall come from RPS eligible resources located in Virginia. (Va. Code § 56-585.5(C)).
3. Not primarily cost-based. Mandatory RPS paired with obligation for Dominion Energy to retire nearly all coal units by 2024 and all carbon-emitting power plants by 2045 (Va. Code § 56-585.5(B)(1) and (3)).

[1] https://lis.virginia.gov/cgi-bin/legp604.exe?201+sum+HB1526

OFFICIAL COPY
Sept 02 2023

PROCUREMENT DIRECTIVES

Layered on top of the RPS are the following specific statutory generation procurement directives:

1. **Overview**
    a. Appalachian Power Company must procure 600 MW of solar or onshore wind located in Virginia by Dec. 31, 2030. (*Va. Code § 56-585.5(D)(1))*

    b. Dominion Energy must procure 16,100 MW of solar or onshore wind located in Virginia by Dec. 31, 2035 (*Va. Code § 56-585.5(D)(2)*):
        i. Must include 1,100 megawatts of solar generation of a small projects (less than 3 MW).

    c. Construction or purchase by a public utility of one or more offshore wind facilities with an aggregate capacity of up to 5,200 MW off Virginia's Atlantic shorelines of in federal waters and interconnected into Virginia is predetermined to be in the public interest (*Va. Code § 56-585.1:11(B)*).

    d. Construction by Dominion Energy of one or more new utility-owned and utility operated offshore wind facilities located off Virginia's Atlantic shoreline of between 2,500 – 3,000 MW predetermined to be in the public interest. (*Va. Code § 56-585.1:11(C)(1)*).
        i. Cost cannot exceed 1.4 times the comparable cost, on an unweighted average basis, of a conventional simple cycle combustion turbine generating facility as estimated by the U.S. Energy Information Administration in its Annual Energy Outlook 2019; and must either commence construction prior to 2024 or have a plan to be placed in service prior to January 1, 2028. (*Va. Code § 56-585.1:11(C)(1)*).

    e. Appalachian Power Company must construct or acquire energy storage projects up to 400 MW by 2035 (*Va. Code § 56-585.5(E)(1)*).

    f. Dominion Energy must construct or acquire energy storage projects up to 2,700 MW by 2035. (*Va. Code § 56-585.5(E)(2)*).
        i. Public interest finding for up to 2,700 MW of energy storage facilities located in Virginia. (*Va. Code § 56-585.1:4)*

2. **Ownership Allocation**
    a. **Solar or Onshore Wind:** 35% third party ownership and 65% utility ownership (*Va. Code §56-585.5(D)(2)*).
    b. **Storage:** 35% third-party ownership and 65% - 100% utility ownership (*Va. Code §56-585.5(E)(5)*).
    c. **Offshore Wind:** 100% utility ownership. (*Va. Code § 56-585.1:11(B) and § 56-585.5(D)(2)*).

3. **RFP Administration**
    a. All resources required to be procured through competitive process. (*see e.g., Va. Code § 56-585.1:4(D)* (solar)*, Va. Code § 56-585.1:11(E)* (offshore wind)*, Va. Code § 56-585.1:4 (G)*) (storage)).
        i. Primarily price-based, but up to 25% of solar may be selected on non-price criteria where it would materially advance non-price criteria, including favoring geographic distribution of generating capacity, areas of higher employment, or regional economic development.

    b. RFP requirements include the following (*Va. Code § 56-585.5(D)(3)*):
        i. Annual RFP for new solar and wind resources that quantifies and describes the utility's need for energy, capacity, or renewable energy certificates.
        ii. RFP must provide certain minimum information including major assumptions to be used by the utility in the bid evaluation process, including environmental emission standards; detailed instructions for preparing bids so that bids can be evaluated on a consistent basis; the preferred general location of additional capacity; and specific information concerning the factors involved in determining the price and non-price criteria used for selecting winning bids.
        iii. Energy storage requirements are also be competitively procured with regulations relating to competitive solicitations to be established through a Commission rulemaking. (*Va. Code § 56-585.5(E)(5)*).

OFFICIAL COPY
Sep 02 2023

c. Utility is responsible for evaluation and may evaluate responses to requests for proposals based on any criteria that it deems reasonable but must consider (*Va. Code § 56-585.5(D)(3)*):
   i. the status of a particular project's development,
   ii. the age of existing generation facilities,
   iii. the demonstrated financial viability of a project and the developer,
   iv. a developer's prior experience in the field,
   v. the location and effect on the transmission grid of a generation facility,
   vi. benefits to the Commonwealth that are associated with particular projects, including regional economic development and the use of goods and services from Virginia businesses; and
   vii. the environmental impacts of particular resources, including impacts on air quality within the Commonwealth and the carbon intensity of the utility's generation portfolio.

d. Selected portfolio of resources to be reviewed by the Virginia Commission.

WHAT IS BEING RECOMMENDED?

The North Carolina Energy Regulatory Process recommends that the North Carolina General Assembly expand existing procurement practices to utilize competitive procurement as a tool for State electric utilities to meet energy and capacity needs defined in their respective IRPs and where otherwise deemed appropriate by the NCUC.

NERP recommends that state policy regarding utility competitive procurement should take into account unique characteristics of each utility service territory, e.g., number of customers, geographic size, amount of utility-owned generation in the service territory, and proportion of existing generation from renewable sources located in the service territory and serving utility customers.

NERP produced the following documents for dissemination, to inform subsequent policy discussions with various audiences:

1. Competitive procurement policy recommendation for the North Carolina General Assembly.

2. A case study into Colorado's recent procurement cycle.

3. This case study into key generation procurements enacted by the Virginia Clean Economy Act.

This fact sheet represents the work of stakeholders as of 12/18/2020.

About the North Carolina Energy Regulatory Process

Governor Cooper's Executive Order 80 mandated the development of a clean energy plan for the state of North Carolina. The Clean Energy Plan recommended the launch of a stakeholder process to design policies that align regulatory incentives with 21st century public policy goals, customer expectations, utility needs, and technology innovation. The stakeholder process was launched in February 2020 and has led to policy proposals on energy reform.

Peak Load Reduction PIM

Metric

The proposed metric for the peak load reduction PIM is the estimated Winter peak kW reduction associated with customer enrollment in the Company's dynamic and time-differentiated rates, including additional rates proposed and approved in the future.

Proposed metric would be calculated for each applicable rate as:

	Total enrolled customers (as of Dec. 31) less participants enrolled at the time of PIM approval
x	Average expected Winter peak reduction per enrolled customer (kW)
=	**Estimated Winter peak kW reduction**
x	Utility system benefit ($ / kW) – *based on approved inputs from EE/DSM Cost Recovery Mechanism*
=	**Total Joint System Benefit**
x	Company allocation of Joint Benefit
=	**Company incentive value**

Estimated Winter peak reduction will be reported annually after the end of each Rate Year, calculated based on total enrollment in relevant rate programs as of December 31.

Eligible programs

Calculation will only include and recognize peak load reductions from incremental customer participation and associated deemed kW reductions after approval of the PIM by the Commission, including any new applicable rate designs approved by the Commission during the MYRP. Eligible rate programs include rates identified at the time of establishing the PIM and any new time-differentiated or dynamic rates that are identified for inclusion at the time of Commission approval.

Presently, there are limited residential eligible rate programs (i.e. RSTC and RETC) in DEC North Carolina. There are also existing non-residential time differentiated rates (i.e. SGSTC and OPT-V), but given the complexity associated with determining a deemed savings from such a heterogeneous customer group, the impact of any estimated incremental participation will be modeled and vetted on a case-by-case basis at the time of calculating the proposed incentive.

At the time of seeking approval for any additional rates that the Company identifies for inclusion in the performance metric calculation, the Company shall provide a proposed initial kW savings reduction to be utilized and supporting documentation/rationale.

OFFICIAL COPY
Oct 02 2023

Incentive calculation

Based on a sharing of utility system savings structure, in each year during the MYRP, customers will retain 70% of the calculated joint benefit resulting from estimated Winter peak kW reduction. The Company can earn a payment equal to 30% of the calculated joint benefit resulting from estimated Winter peak kW reduction. Any earned payment would be recovered through the PIM rider established by the Commission upon authorization of the MYRP.

For existing eligible rate programs (RSTC and RETC), the average expected Winter peak reduction per enrolled customer is approximately ~0.21-0.31 kW.

Based on approved inputs utilized in the Company's DSM/EE Cost Recovery Mechanism, as applied to the vintage year that aligns with the PIM period in the most recently approved DSM/EE rider filing, the current value of the utility system benefit is approximately $80 to $90 per kW of Winter peak reduction.

Table 1: Illustrative calculation of incentive value for range of incremental customer participation in R TOU CPP time-differentiated rate program

Customer enrollment	Approximate incentive value
15,000	$100,000
75,000	$500,000
150,000	$1,000,000
200,000	$1,300,000
275,000	$1,800,000

Projection of costs to be incurred and proposed resources (labor, contractors, materials, etc.) per Commission Rule R1-17B(d)(3)d.

The required resources to support advancement of this policy goal are limited to marketing and billing system efforts associated with approved dynamic and time-differentiated rate programs, as well as efforts to develop and gain approval of additional dynamic and time-differentiated rates.

Additional costs associated with the Peak Load Reduction PIM include:

- Implementation of participation tracking (*estimated to be ~$100-200k on approval of PIM)*
- Evaluation, measurement, and verification (EM&V) costs associated with each time differentiated or dynamic rate included in the PIM calculation, to update impacts for future calculations *(estimated to be ~$50-$200k per new rate design)*
- Incremental marketing costs for rate offerings *(estimated to be ~$50-200k per year)*

OFFICIAL COPY
Oct 02 2023

Approach for evaluation, measurement, and verification

The specific metric to assess performance will be the total number of enrolled customers in eligible rate programs as of December 31 occurring during the Rate Year.

The Company will use internal labor to analyze customer data, and an independent third-party for validation. Third-party review will also include approach and methodology to determine the value of savings. Additional EM&V sampling will occur at the point in time when there is a sufficient participant pool to yield statistically significant results.

Low-Income/Affordability PIM

Metric

The proposed metric for the low-income affordability PIM is annual Rate Year contributions ($) to the DEC-NC Share the Light Fund program to support low-income customers through bill paying assistance. Results will be reported annually after the end of each Rate Year.

Eligible contributions

The metric will include all voluntary contributions from customers, Company employees, and third parties to the existing DEC-NC Share the Light Fund.

All other contributions by the Company or its Foundation, including the current matching program (up to $375,000 under the current program) would not be included in the metric.

PIM description

This PIM gives the Company added incentive to promote and encourage contributions to the Share the Light Fund to benefit customers in need, while providing a corresponding shareholder contribution to address needed health and safety repairs that currently prevent many low-income residences from qualifying for weatherization or other energy efficiency ("EE") improvements.

The Company will make structured shareholder contributions to fund residential health and safety initiatives to enable low-income customer participation in weatherization and EE programs based upon the level of Rate Year contributions to the DEC-NC Share the Light Fund. Shareholder contributions are classified as either (a) **shareholder contribution**, or (b) **bonus shareholder matching**, with no differentiation of use for funds based on the contribution classification. The PIM structure incentivizes the Company to encourage Share the Light Fund contributions.

This PIM is "downside-only" to the Company. The maximum total of per Rate Year shareholder contributions pursuant to this PIM is $3.0 million, with a minimum total shareholder contribution of $1.9 million.

Formulas / approach for calculating structured contributions are as follows:

- **Shareholder contribution** = $3.0 million – [0.75 x eligible contributions]
- **Bonus shareholder matching** is dollar-for-dollar for eligible contributions over $1.5 million (up to $1.5 million bonus shareholder matching maximum)

For example:

A) If eligible contributions to the Company's Share the Light Fund in a given Rate Year equal $360,000, the:

- **shareholder contribution** would be $2,730,000: (3,000,000 – (360,000 * 75%))
- **bonus shareholder matching** would be $0

OFFICIAL COPY
Oct 02 2023

B) If eligible contributions to the Company's Share the Light Fund in a given rate year equal $1,875,000, the:
- **shareholder contribution** would be $1,593,750: (3,000,000 – (1,875,000 * 75%))
- **bonus shareholder matching** would be $375,000

The existing Foundation matching program is unchanged and unrelated to this PIM. Eligible contributions to the DEC-NC Share the Light Fund (and associated Foundation matching) will continue to directly fund programming for bill assistance to low-income customers.

Structured contributions associated with the PIM (both **shareholder contribution** and **bonus shareholder matching)** will to be used to fund residential health and safety initiatives to enable low-income customer participation in weatherization and EE programs.

Because the shareholder contribution structure of this proposed PIM would not flow to all customers, but only to low-income residences through weatherization trade allies to implement needed health and safety repairs, the Company would not include any shareholder payments from this PIM in the PIM rider; the Company does propose, however, to count the "downside-only" amounts as part of the 1% revenue requirement PIMs cap as it represents an obligation of the Company to advance important policy goals as part of its proposed PIM portfolio.

OFFICIAL COPY
Oct 02 2023

Table 1: Illustrative calculation of shareholder contributions by the Company, for range of Rate Year contributions to the Share the Light Fund

Rate Year contributions to Share the Light Fund	Foundation matching (existing system)	Structured PIM contributions (for health and safety repairs)		Total funding
		Shareholder contribution	Bonus shareholder matching	
$0	$0	$3,000,000	$0	**$3,000,000**
$200,000	$200,000	$2,850,000	$0	**$3,250,000**
$400,000	$375,000	$2,700,000	$0	**$3,475,000**
$600,000	$375,000	$2,550,000	$0	**$3,525,000**
$800,000	$375,000	$2,400,000	$0	**$3,575,000**
$1,000,000	$375,000	$2,250,000	$0	**$3,625,000**
$1,200,000	$375,000	$2,100,000	$0	**$3,675,000**
$1,400,000	$375,000	$1,950,000	$0	**$3,725,000**
$1,600,000	$375,000	$1,800,000	$100,000	**$3,875,000**
$1,800,000	$375,000	$1,650,000	$300,000	**$4,125,000**
$2,000,000	$375,000	$1,500,000	$500,000	**$4,375,000**

Projection of costs to be incurred and proposed resources (labor, contractors, materials, etc.) per Commission Rule R1-17B(d)(3)d.

The required resources to support advancement of this policy goal include marketing efforts associated with the Share the Light Fund program. The Company estimates an incremental $15,000 in annual marketing costs for the Share the Light Fund as part of this PIM.

In addition, similar to the existing processes utilized as a result of previous regulatory proceedings involving the Company, a third-party administrator will be utilized to distribute funds consistent with the distribution of similar funds as part of prior Helping Home Fund ("HHF") commitments. The Company plans to utilize a third party to administer the shareholder funds available pursuant to this PIM to weatherization trade allies to be used for health and safety repairs. As with the existing HHF administration process, the vendor administrative costs will be established not to exceed 10% of the shareholder funds provided for health and safety repairs.

Additional incremental costs are expected to be minimal at this point, as internal program management resources track Share the Light Fund contributions.

OFFICIAL COPY

Oct 02 2023

Approach for evaluation, measurement, and verification

The Company has existing internal resources and systems to track contributions to the Share the Light Fund and will use these existing resources to evaluate, measure, and verify compliance with or achievement of this PIM's terms.

Reliability PIM

Metric

The proposed metric for the reliability PIM is system average interruption duration index ("SAIDI"), excluding major event days ("MEDs"). Results will be reported annually after the end of each Rate Year, for performance during the 12-month period ending on December 31.

Illustrative thresholds (pending update for 2022 data)

	Performance threshold
SAIDI 5-year historic average (2018-2022) *No penalty for SAIDI below Tier 1 threshold*	**180***
SAIDI threshold for Tier 1 penalty *Financial penalty if SAIDI above threshold value*	**200*** *$1.5M*
SAIDI threshold for Tier 2 penalty *Financial penalty if SAIDI above threshold value*	**220*** *$3.0M*
SAIDI threshold for Tier 3 penalty *Financial penalty if SAIDI above threshold value*	**240*** *$9.0M*

***Note:** * Thresholds and tiers are based on expected 5-year average SAIDI (excluding MEDs) for 2018-22 using currently available data. Thresholds and tiers are to be recalculated in early 2023 with complete data, using methodology described in this exhibit.*

PIM description

This PIM holds DEC accountable to maintain service reliability as measured by SAIDI. The Company will be required to return a penalty to customers if SAIDI performance exceeds established thresholds. Potential penalties are tiered to increase for cases where performance exceeds historic average performance by escalating amounts. Any calculated penalty would be returned to customers through the PIM rider established by the Commission upon authorization of the MYRP.

Illustrative thresholds for penalties are based upon historic averages (2018-2022) adjusted for statistical confidence levels and increased outages due to additional grid work that is expected during the MYRP. Specifically, thresholds were calculated as:

OFFICIAL COPY
Oct 02 2023

5-year historic average for 2018-2022 is expected to be 180 minutes (based on data ending September 2022)

- For the purpose of this filing, the 2018-2022 five-year average SAIDI is the most recent known average and therefore is most appropriate to use for target setting

Tier 1 SAIDI threshold = 200

- 80% confidence interval for forward-projected SAIDI performance averages +/- 10.0 minutes, based on standard deviation for 2018-2022 SAIDI performance
- Threshold adjusted for impact of elevated improvement work volume during the MYRP, which is expected to raise SAIDI by ~10 minutes (driven by increased Hot Line Tag and Planned Outages)

Tier 2 SAIDI threshold = 220

- Based on increase of 20 minutes above Tier 1 threshold

Tier 3 SAIDI threshold = 240

- Based on increase of 20 minutes above Tier 2 threshold

Projection of costs to be incurred and proposed resources (labor, contractors, materials, etc.) per Commission Rule R1-17B(d)(3)d.

Costs associated with the reliability PIM are expected to be minimal, as existing systems for tracking and reporting of SAIDI (excluding MEDs) to the Commission will be cross utilized for PIM reporting. This efficiency is enabled because the proposed metric mirrors existing reporting.

Approach for evaluation, measurement, and verification

Current systems for tracking and calculation of SAIDI performance are to be used for PIM reporting, and the Company will use these existing resources to evaluate, measure, and verify compliance with or achievement of this PIM's terms.

Renewables Integration and Encouragement PIM

This PIM is "upside-only" to the Company and has three subpart components to incent and reward the Company for (A) integrating additional distributed energy resources ("DER") that are located on customer premises; (B) designing, obtaining regulatory approval for, and offering new renewables programs subscribed to by commercial and industrial ("C&I") customers; and (C) designing, obtaining regulatory approval for, and offering new shared solar programs subscribed to by residential customers.

Renewables Integration and Encouragement PIM – Metric A

Metric A: DER Integration

The first proposed metric for the Renewables Integration and Encouragement PIM is the total number of Net Energy Metering ("NEM") projects connected by DEC during each Rate Year. Results will be reported annually after the end of each Rate Year, for performance during the Rate Year. Projects for all classes of DEC customers will be included in the performance assessment.

Metric A: PIM description

In each year during the MYRP, the Company can earn a reward for exceeding performance thresholds for the proposed metric. Potential rewards are tiered to increase for cases where performance exceeds higher thresholds. Any earned reward would be recovered through the PIM rider established by the Commission upon authorization of the MYRP.

Metric A: Performance Thresholds

There are two relevant matters pending before the Commission whose regulatory outcomes could have an impact upon the potential number of new NEM projects connected (the Joint Petition for Approval of Revised Net Energy Metering Tariffs and the Application for Approval of Smart $aver Solar Energy Efficiency Program). While the structure of this PIM currently makes no assumption on the outcome of these proceedings, as these matters are resolved, we would look to adjust the targeted performance thresholds.

Table 1

	Performance threshold
Tier 1 performance threshold *Financial reward if connections exceed value*	**3,856*** *$1.5M*
Tier 2 performance threshold *Financial reward if connections exceed value*	**4,223*** *$3M*
Tier 3 performance threshold *Financial reward if connections exceed value*	**4,590*** *$6M*

*Note: * Performance Thresholds are based on expected 3-year average annual connections for 2020-22 using currently available data. All Performance Thresholds are to be recalculated in early 2023 for complete historical connection data, using the methodology described in this exhibit.*

OFFICIAL COPY
Oct 02 2023

Performance thresholds are calculated on the following basis:

Tier 1 performance threshold (3,856) represents 5% increase from 3-year historic average (2020-22) annual connections estimated to be 3,672*

Tier 2 performance threshold (4,223) represents 15% increase from 3-year historic average (2020-22) annual connections*

Tier 3 performance threshold (4,590) represents 25% increase from 3-year historic average (2020-22) annual connections*

Fixed performance thresholds will be used for all Rate Years.

Metric A: Projection of costs to be incurred and proposed resources (labor, contractors, materials, etc.) per Commission Rule R1-17B(d)(3)d.

Costs associated with this metric are expected to be limited to administrative costs required for initial implementation of tracking systems and for annual support to reconcile data. These costs are estimated to be approximately $5,000.

Metric A: Approach for evaluation, measurement, and verification

The Company will solely use internal labor to collect, analyze, and report data for this metric. Expected costs associated with this work are included in the cost estimate above.

OFFICIAL COPY
Oct 02 2023

Renewables Integration and Encouragement PIM – Metric B

Metric B: Large Customer Renewable Program Encouragement

The second proposed metric for the Renewables Integration and Encouragement PIM is the cumulative share of C&I customer renewables program capacity subscribed by eligible customers. Results will be reported annually after the end of each Rate Year, for calculated performance as of the last day of the Rate Year.

Program subscription by eligible DEC customers as a share of installed and in-queue capacity (i.e., all capacity available for subscription) for DEC customers through eligible programs will be considered for performance assessment.

Specific formula for calculation of proposed metric:

$$Program\ subscription\ share\ (\%) = \frac{cumulative\ customer\ subscription\ (MW)}{(\ cumulative\ installed\ capacity\ (MW) + cumulative\ in\ queue\ capacity\ (MW))}$$

Definitions:

Cumulative customer subscription = MW of eligible program capacity that all DEC C&I customers have subscribed to (total for all eligible programs)

Cumulative installed capacity = MW of eligible program capacity that is installed and available for DEC C&I customer subscription (total for all eligible programs)

Cumulative in queue capacity = MW of eligible program capacity that is not yet in service, but is planned and available for DEC C&I customer subscription (total for all eligible programs)

Metric B: Eligible programs

The PIM would consider new C&I customer renewables programs that financially and/or environmentally link off-site renewable facilities (not directly connected to a customer premises) to a C&I customer's account(s). For purposes of this PBR Application, eligible programs do not include any REC-only programs that have no term commitment.

The PIM would account for customer subscription as a share of total available capacity (including both installed and in-queue capacity) for eligible programs that are approved by the Commission subsequent to the filing of this PBR Application.

OFFICIAL COPY
Oct 02 2023

Metric B: PIM description

In each year during the MYRP, the Company can earn a reward for meeting or exceeding performance thresholds for the proposed metric. Potential rewards are tiered to increase for cases where performance meets or exceeds higher thresholds. Any earned reward would be recovered through the PIM rider established by the Commission upon authorization of the MYRP.

Metric B: Performance Thresholds

Table 2	**Performance threshold**
Tier 1 performance threshold *Financial reward if performance meets or exceeds threshold*	**≥ 30% subscribed** *$1,000,000*
Tier 2 performance threshold *Financial reward if performance meets or exceeds threshold*	**≥ 50% subscribed** *$2,000,000*
Tier 3 performance threshold *Financial reward if performance meets or exceeds threshold*	**≥ 70% subscribed** *$3,000,000*

Tier 1 performance threshold (30%) is based on an optimistic forecast of program subscription during the initial years following approval of eligible programs. Tier 2 and 3 performance thresholds are based on an increase of 20% and 40%, respectively, over the Tier 1 threshold.

Proposed performance thresholds are applicable for all Rate Years, with performance assessed independently during each Rate Year (i.e., Tier 1 financial reward could be earned in consecutive years, if subscription rate falls between 30% and 50% in both Rate Years).

Example calculations:

a) Rate Year 1 ends with total available (installed + in-queue) capacity of 100 MW for DEC C&I customers across all eligible programs; DEC C&I customers have subscribed to 25 MW of available capacity:
   - Program subscription share = 25 / 100 = 25%
   - Performance < Tier 1 threshold; **no reward earned**

b) Rate Year 2 ends with total available (installed + in-queue) capacity of 250 MW (100 MW carried forward from Rate Year 1, with 150 MW added during Rate Year 2) for DEC C&I customers across all eligible programs; DEC C&I customers have subscribed to 100 MW (25 MW carried forward from Rate Year 1, with 75 MW new subscription during Rate Year 2) of available capacity:
   - Program subscription share = 100 / 250 = 40%
   - Performance > Tier 1 threshold and < Tier 2 threshold; **reward of $1,000,000 earned**

OFFICIAL COPY

Oct 02 2023

Metric B: Projection of costs to be incurred and proposed resources (labor, contractors, materials, etc.) per Commission Rule R1-17B(d)(3)d.

Internal program management resources, systems, and marketing efforts for applicable new large customer renewable programs will be in place to support new programs, including tracking. Therefore, incremental PIM-associated costs are expected to be minimal.

Metric B: Approach for evaluation, measurement, and verification

Internal program management resources, systems, and marketing efforts for applicable new large customer renewable programs will be in place to support new programs, including tracking. Company will use these existing resources to evaluate, measure, and verify compliance with or achievement of this PIM's terms.

OFFICIAL COPY

Renewables Integration and Encouragement PIM – Metric C

Metric C: Residential Customer Shared Solar Program Encouragement

The third proposed metric for the Renewables Integration and Encouragement PIM is the cumulative share of residential customer shared solar program capacity subscribed by eligible customers. Results will be reported annually after the end of each Rate Year, for calculated performance as of the last day of the Rate Year.

Program subscription by eligible DEC customers as a share of installed capacity available for subscription by DEC customers through eligible programs will be considered for performance assessment.

Specific formula for calculation of proposed metric:

$$Program\ subscription\ share\ (\%) = \frac{cumulative\ customer\ subscription\ (MW)}{cumulative\ installed\ capacity\ (MW)}$$

Definitions:

Cumulative customer subscription = MW of eligible shared solar program capacity that all DEC residential customers have subscribed to (total for all eligible programs)

Cumulative installed capacity = MW of eligible shared solar program capacity that is installed and available for DEC residential customer subscription (total for all eligible programs)

Metric C: Eligible programs

The PIM would consider new shared solar customer renewables programs for residential customers that financially and/or environmentally link off-site renewable facilities (not directly connected to a customer premises) to a customer's account(s). For purposes of this PBR Application, eligible programs do not include any REC-only programs that have no term commitment.

The PIM would account for total cumulative residential customer subscription as a share of total cumulative installed capacity for eligible shared solar programs that are approved by the Commission subsequent to the filing of this PBR Application.

OFFICIAL COPY
Oct 02 2023

Metric C: PIM description

In each year during the MYRP, the Company can earn a reward for meeting or exceeding performance thresholds for the proposed metric. Potential rewards are tiered to increase for cases where performance meets or exceeds higher thresholds. Any earned reward would be recovered through the PIM rider established by the Commission upon authorization of the MYRP.

Metric C: Performance Thresholds

Table 3	**Performance threshold**
Tier 1 performance threshold *Financial reward if performance meets or exceeds threshold*	**≥ 30% subscribed** *$500,000*
Tier 2 performance threshold *Financial reward if performance meets or exceeds threshold*	**≥ 50% subscribed** *$1,000,000*
Tier 3 performance threshold *Financial reward if performance meets or exceeds threshold*	**≥ 70% subscribed** *$1,500,000*

Tier 1 performance threshold (30%) is based on an optimistic forecast of program subscription during the initial years following approval of eligible programs. Tier 2 and 3 performance thresholds are based on an increase of 20% and 40%, respectively, over the Tier 1 threshold.

Proposed performance thresholds are applicable for all Rate Years, with performance assessed independently during each Rate Year (i.e., Tier 1 financial reward could be earned in consecutive years, if subscription rate falls between 30% and 50% in both Rate Years).

Example calculations:

a) Rate Year 1 ends with total cumulative installed shared solar capacity of 30 MW for DEC residential customers across all eligible programs; DEC residential customers have subscribed to 8 MW of available capacity:
   - Program subscription share = 8 / 30 = ~27%
   - Performance < Tier 1 threshold; **no reward earned**

b) Rate Year 2 ends with total cumulative installed shared solar capacity of 70 MW (30 MW carried forward from Rate Year 1, with 40 MW added during Rate Year 2) for DEC residential customers across all eligible programs; DEC residential customers have subscribed to 30MW (8 MW carried forward from Rate Year 1, with 22 MW new subscription during Rate Year 2) of available capacity:
   - Program subscription share = 30 / 70 = ~43%
   - Performance > Tier 1 threshold and < Tier 2 threshold; **reward of $500,000 earned**

Reliability PIM

Metric

The proposed metric for the reliability PIM is system average interruption duration index ("SAIDI"), excluding major event days ("MEDs"). Results will be reported annually after the end of each Rate Year, for performance during the 12-month period ending on December 31.

Illustrative thresholds:

	RY1 (2024 data)	RY2 (2025 data)	RY3 (2026 data)
SAIDI 5-year historic average (2018-2022) adjusted for expected SOG improvements *No penalty for SAIDI below Tier 1 threshold*	**177**	**174**	**172**
SAIDI threshold for Tier 1 penalty *Financial penalty if SAIDI above threshold value*	**197** *$1.5 million*	**194** *$1.5 million*	**192** *$1.5 million*
SAIDI threshold for Tier 2 penalty *Financial penalty if SAIDI above threshold value*	**217** *$3 million*	**214** *$3 million*	**212** *$3 million*
SAIDI threshold for Tier 3 penalty *Financial penalty if SAIDI above threshold value*	**237** *$9 million*	**234** *$9 million*	**232** *$9 million*

PIM description

This PIM holds DEC accountable to maintain service reliability as measured by SAIDI, adjusted for expected improvements due to MYRP grid projects. The Company will be required to return a penalty to customers if SAIDI performance exceeds established thresholds. Potential penalties are tiered to increase for cases where performance worsens from performance standards by escalating amounts. Any calculated penalty would be returned to customers through the PIM rider established by the Commission upon authorization of the MYRP.

OFFICIAL COPY
Oct 02 2023

Thresholds for penalties are based upon historic averages (2018-2022) adjusted for statistical confidence levels and increased outages due to additional grid work that is expected during the MYRP, with adjustments for projected improvements from Self-Optimizing Grid projects during the MYRP. Specifically, thresholds were calculated as:

5-year historic average for 2018-2022 is 179 minutes

Tier 1 SAIDI threshold = 197 in RY1, 194 in RY2, 192 in RY3

- 80% confidence interval for forward-projected SAIDI performance averages +/- 10.0 minutes, based on standard deviation for 2018-2022 SAIDI performance
- Threshold adjusted for impact of elevated improvement work volume during the MYRP, which is expected to raise SAIDI by ~10 minutes (driven by increased Hot Line Tag and Planned Outages)

Tier 2 SAIDI threshold = 217 in RY1, 214 in RY2, 212 in RY3

- Based on increase of 20 minutes above Tier 1 threshold

Tier 3 SAIDI threshold = 237 in RY1, 234 in RY2, 232 in RY3

- Based on increase of 20 minutes above Tier 2 threshold

Projection of costs to be incurred and proposed resources (labor, contractors, materials, etc.) per Commission Rule R1-17B(d)(3)d.

Costs associated with the reliability PIM are expected to be minimal, as existing systems for tracking and reporting of SAIDI (excluding MEDs) to the Commission will be cross utilized for PIM reporting. This efficiency is enabled because the proposed metric mirrors existing reporting.

Approach for evaluation, measurement, and verification

Current systems for tracking and calculation of SAIDI performance are to be used for PIM reporting, and the Company will use these existing resources to evaluate, measure, and verify compliance with or achievement of this PIM's terms.

OFFICIAL COPY

Time Differentiated and Dynamic Rate Enrollment PIM

Metric

The Time Differentiated and Dynamic Rate Enrollment PIM measures the incremental enrollment in the Company's dynamic and time-differentiated rates, including additional rates proposed and approved subsequent to the approval of this PIM.

Proposed metric would be calculated annually for each eligible rate as:

	Total enrolled customers less participants enrolled at the time of PIM approval
x	Incentive per customer enrolled ($5.00)
=	**Rate Year incentive value**

The per Rate Year financial incentive structure for this PIM will be based on a fixed incentive-per-customer structure, at $5.00 per incremental customer enrolled in a relevant rate program after approval of the PIM by the Commission, with a cap of 450,000 customers and $2,250,000 per Rate Year.

Eligible programs

Calculation will only include and recognize incremental customer participation after approval of the PIM by the Commission, including any new applicable rate designs approved by the Commission during the MYRP. Eligible rate programs include rates identified at the time of establishing the PIM and any new time-differentiated or dynamic rates that are identified for inclusion at the time of Commission approval.

Presently, there are limited residential eligible rate programs (i.e. RSTC, RETC, and RT) in DEC North Carolina.

Table 1: Illustrative calculation of incentive value for range of incremental customer participation in R TOU CPP time-differentiated rate program

Incremental customer enrollment	Annual Rate Year incentive value
10,000	$ 50,000
50,000	$ 250,000
100,000	$ 500,000
150,000	$ 750,000
250,000	$ 1,250,000
350,000	$ 1,750,000
450,000	$ 2,250,000

OFFICIAL COPY
Oct 02 2023

Projection of costs to be incurred and proposed resources (labor, contractors, materials, etc.) per Commission Rule R1-17B(d)(3)d.

The required resources to support advancement of this policy goal are limited to marketing and billing system efforts associated with approved dynamic and time-differentiated rate programs, as well as efforts to develop and gain approval of additional dynamic and time-differentiated rates.

Additional costs associated with the proposed PIM include:

- Implementation of participation tracking (*estimated to be ~$100-200k on approval of PIM)*
- Evaluation, measurement, and verification (EM&V) costs associated with each time differentiated or dynamic rate included in the PIM calculation, to gather information regarding program impacts for future calculations *(estimated to be ~$50-$200k per new rate design)*
- Incremental marketing costs for rate offerings *(estimated to be ~$50-200k per year)*

Approach for evaluation, measurement, and verification

The Company will use internal labor to analyze customer data.

Reliability PIM

Metric

The proposed metric for the Reliability PIM is system average interruption duration index ("SAIDI"), excluding major event days ("MEDs"). Results will be reported annually after the end of each Rate Year, for performance during the 12-month period ending December 31.

Illustrative thresholds:

	RY1 (2024 data)	RY2 (2025 data)	RY3 (2026 data)
SAIDI 5-year historic average (2018-2022) adjusted for expected SOG improvements *No penalty for SAIDI below Tier 1 threshold*	**177**	**174**	**172**
SAIDI threshold for Tier 1 penalty *Financial penalty if SAIDI above threshold value*	**197** *$1.5 million*	**194** *$4 million*	**192** *$6 million*
SAIDI threshold for Tier 2 penalty *Financial penalty if SAIDI above threshold value*	**217** *$3 million*	**214** *$7 million*	**212** *$9 million*
SAIDI threshold for Tier 3 penalty *Financial penalty if SAIDI above threshold value*	**237** *$9 million*	**234** *$13 million*	**232** *$15 million*

PIM description

This PIM holds DEC accountable to maintain service reliability as measured by SAIDI, adjusted for expected improvements due to MYRP grid projects. The Company will be required to return a penalty to customers if SAIDI performance exceeds established thresholds. Potential penalties are tiered to increase for cases where performance worsens from performance standards by escalating amounts. Any calculated penalty would be returned to customers through the PIM rider established by the Commission upon authorization of the MYRP.

Thresholds for penalties are based upon historic averages (2018-2022), adjusted for statistical confidence levels and increased outages due to additional grid work that is expected during the MYRP, with adjustments for projected improvements from Self-Optimizing Grid projects during the MYRP. Specifically, thresholds were calculated as:

5-year historic average for 2018-2022 is 179 minutes.

Tier 1 SAIDI threshold = 197 in Rate Year 1, 194 in Rate Year 2, 192 in Rate Year 3

OFFICIAL COPY
Oct 02 2023

- 80% confidence interval for forward-projected SAIDI performance averages ~10 minutes, based on standard deviation for 2018-2022 SAIDI performance
- Threshold adjusted for impact of elevated improvement work volume during the MYRP, which is expected to raise SAIDI by ~10 minutes (driven by increased Hot Line Tag and Planned Outages)

Tier 2 SAIDI threshold = 217 in Rate Year 1, 214 in Rate Year 2, 212 in Rate Year 3

- Based on increase of 20 minutes above Tier 1 threshold

Tier 3 SAIDI threshold = 237 in Rate Year 1, 234 in Rate Year 2, 232 in Rate Year 3

- Based on increase of 20 minutes above Tier 2 threshold

Projection of costs to be incurred and proposed resources (labor, contractors, materials, etc.) per Commission Rule R1-17B(d)(3)d.

Costs associated with the Reliability PIM are expected to be minimal, as existing systems for tracking and reporting of SAIDI (excluding MEDs) to the Commission will be cross utilized for PIM reporting. This efficiency is enabled because the proposed metric mirrors existing reporting.

Approach for evaluation, measurement, and verification

Current systems for tracking and calculation of SAIDI performance are to be used for PIM reporting, and the Company will use these existing resources to evaluate, measure, and verify compliance with or achievement of this PIM's terms.

Renewables Integration and Encouragement PIM

This PIM is "upside-only" to the Company and has three subpart components to incent and reward the Company for (A) integrating additional distributed energy resources ("DER") that are located on customer premises; (B) designing, obtaining regulatory approval for, and offering new renewables programs subscribed to by commercial and industrial ("C&I") customers; and (C) interconnecting utility-scale renewable resources.

Renewables Integration and Encouragement PIM – Metric A

Metric A: DER Integration

The first proposed metric for the Renewables Integration and Encouragement PIM is the total number of Net Energy Metering ("NEM") projects connected by DEC during each Rate Year. Results will be reported annually after the end of each Rate Year, for performance during the Rate Year period. Projects for all classes of DEC customers will be included in the performance assessment.

Metric A: PIM description

In each year during the MYRP, the Company can earn a reward for exceeding performance thresholds for the proposed metric. Potential rewards are tiered to increase for cases where performance exceeds higher thresholds. Any earned reward would be recovered through the PIM rider established by the Commission upon authorization of the MYRP.

Metric A: Performance Thresholds

As set forth below, performance thresholds are based on a rolling 3-year average set baseline, *i.e.*, RY 2022, 2023, 2024 will be used to measure 2025 accomplishments.

	RY1 1/2024-12/2024	**RY2** 1/2025-12/2025	**RY3** 1/2026-12/2026
Baseline threshold based on preceding 3-year rolling average	**Avg of 2021-2023**	**Avg of 2022-2024**	**Avg of 2023-2025**
Tier 1 performance *Financial award connections during Rate Year exceed threshold by 5%*	*$1.5 million*	*$1.5 million*	*$1.5 million*
Tier 2 performance *Financial award connections during Rate Year exceed threshold by 15%*	*$3 million*	*$3 million*	*$3 million*
Tier 3 performance *Financial award connections during Rate Year exceed threshold by 25%*	*$6 million*	*$6 million*	*$6 million*

OFFICIAL COPY
Oct 02 2023

Metric A: Projection of costs to be incurred and proposed resources (labor, contractors, materials, etc.) per Commission Rule R1-17B(d)(3)d.

Costs associated with this metric are expected to be limited to administrative costs required for initial implementation of tracking systems and for annual support to reconcile data. These costs are estimated to be approximately $5,000.

Metric A: Approach for evaluation, measurement, and verification

The Company will solely use internal labor to collect, analyze, and report data for this metric. Expected costs associated with this work are included in the cost estimate above.

Renewables Integration and Encouragement PIM – Metric B

Metric B: Large Customer Renewable Program Encouragement

The second proposed metric for the Renewables Integration and Encouragement PIM is the cumulative share of C&I customer renewables program capacity subscribed by eligible customers. Results will be reported annually after the end of each Rate Year, for calculated performance as of the last day of the Rate Year.

Program subscription by eligible DEC customers as a share of installed and in-queue capacity (i.e., all capacity available for subscription) for DEC customers through eligible programs will be considered for performance assessment.

Specific formula for calculation of proposed metric:

$$Program\ subscription\ share\ (\%) = \frac{cumulative\ customer\ subscription\ (MW)}{(\ cumulative\ installed\ capacity\ (MW) + cumulative\ in\ queue\ capacity\ (MW))}$$

Definitions:

Cumulative customer subscription = MW of eligible program capacity that all DEC C&I customers have subscribed to (total for all eligible programs)

Cumulative installed capacity = MW of eligible program capacity that is installed and available for DEC C&I customer subscription (total for all eligible programs)

Cumulative in queue capacity = MW of eligible program capacity that is not yet in service, but is planned and available for DEC C&I customer subscription (total for all eligible programs)

Metric B: Eligible programs

The PIM would consider new C&I customer renewables programs that financially and/or environmentally link off-site renewable facilities (not directly connected to a customer premises) to a C&I customer's account(s). For purposes of this PBR Application, eligible programs do not include any REC-only programs that have no term commitment.

The PIM would account for customer subscription as a share of total available capacity (including both installed and in-queue capacity) for eligible programs that are approved by the Commission subsequent to the filing of this PBR Application.

OFFICIAL COPY
Oct 02 2023

Metric B: PIM description

In each year during the MYRP, the Company can earn a reward for meeting or exceeding performance thresholds for the proposed metric. Potential rewards are tiered to increase for cases where performance meets or exceeds higher thresholds. Any earned reward would be recovered through the PIM rider established by the Commission upon authorization of the MYRP.

Metric B: Performance Thresholds

Table 2	**Performance threshold**
Tier 1 performance threshold *Financial reward if performance meets or exceeds threshold*	**≥ 30% subscribed** *$333,000*
Tier 2 performance threshold *Financial reward if performance meets or exceeds threshold*	**≥ 50% subscribed** *$667,000*
Tier 3 performance threshold *Financial reward if performance meets or exceeds threshold*	**≥ 70% subscribed** *$1,000,000*

Tier 1 performance threshold (30%) is based on an optimistic forecast of program subscription during the initial years following approval of eligible programs. Tier 2 and 3 performance thresholds are based on an increase of 20% and 40%, respectively, over Tier 1 threshold.

Proposed performance thresholds are applicable for all Rate Years, with performance assessed independently during each Rate Year (i.e., Tier 1 financial reward could be earned in consecutive years, if subscription rate falls between 30% and 50% in both Rate Years).

Example calculations:

a) Rate Year 1 ends with total available (installed + in-queue) capacity of 100 MW for DEC C&I customers across all eligible programs; DEC C&I customers have subscribed to 25 MW of available capacity:
   - Program subscription share = 25 / 100 = 25%
   - Performance < Tier 1 threshold; **no reward earned**

b) Rate Year 2 ends with total available (installed + in-queue) capacity of 250 MW (100 MW carried forward from Rate Year 1, with 150 MW added during Rate Year 2) for DEC C&I customers across all eligible programs; DEC C&I customers have subscribed to 100 MW (25 MW carried forward from Rate Year 1, with 75 MW new subscription during Rate Year 2) of available capacity:
   - Program subscription share = 100 / 250 = 40%
   - Performance > Tier 1 threshold and < Tier 2 threshold; **reward of $333,000 earned**

Oct 02 2023

Metric B: Projection of costs to be incurred and proposed resources (labor, contractors, materials, etc.) per Commission Rule R1-17B(d)(3)d.

Internal program management resources, systems, and marketing efforts for applicable new large customer renewable programs will be in place to support new programs, including tracking. Therefore, incremental PIM-associated costs are expected to be minimal.

Metric B: Approach for evaluation, measurement, and verification

Internal program management resources, systems, and marketing efforts for applicable new large customer renewable programs will be in place to support new programs, including tracking. Company will use these existing resources to evaluate, measure, and verify compliance with or achievement of this PIM's terms.

Renewables Integration and Encouragement PIM – Metric C

Metric C: Interconnection of Utility Scale Renewable Resources

The third proposed metric for the Renewables Integration and Encouragement PIM is the amount of interconnected MWs of utility-scale renewable resources. Results will be reported annually after the end of each Rate Year, for calculated performance as of the last day of the Rate Year.

At the end of each Rate Year, the MWs of utility scale renewables interconnected will be totaled and compared to the performance thresholds shown below. In situations where the Company has completed the work necessary to allow a third party to interconnect, but the third party does not perform the work as required under its Purchased Power Agreement, the MWs made available to interconnect will be counted toward PIM achievement. The Company's work will be deemed completed when the Company provides written notification to the Interconnection Customer that all required system upgrades and utility interconnection facilities required to be constructed by the Company under the Interconnection Agreement are complete and ready to accept energy from the site.

Metric C: PIM description

In each year during the MYRP, the Company can earn a reward for meeting or exceeding performance thresholds for the proposed metric. Potential rewards are tiered to increase for cases where performance meets or exceeds higher thresholds. Any earned reward would be recovered through the PIM rider established by the Commission upon authorization of the MYRP.

Metric C: Performance Thresholds[1]

	RY1 1/2024-12/2024	**RY2** 1/2025-12/2025	**RY3** 1/2026-12/2026
Tier 1 performance:			
MWs Interconnected	-	>551 MWs	>836 MWs
Financial award	-	$ 1,000,000	$2,500,000
Tier 2 performance:			
MWs Interconnected	-	>634 MWs	>961 MWs
Financial award	-	$ 2,000,000	$3,500,000
Tier 3 performance:			
MWs Interconnected	-	>716 MWs	>1,087 MWs
Financial award	-	$ 4,000,0000	$6,000,000

[1] MW Interconnected Tiers based upon the 2023 Carbon Plan Integrated Resource Plan.

Metric C: Projection of costs to be incurred and proposed resources (labor, contractors, materials, etc.) per Commission Rule R1-17B(d)(3)d.

Internal program management resources and systems are in place to support tracking. Therefore, incremental PIM-associated costs are expected to be minimal.

Metric C: Approach for evaluation, measurement, and verification

The Company will use these existing resources to evaluate, measure, and verify compliance with or achievement of this PIM's terms.

MYRP PROJECTS SUMMARY

Line No.	MYRP Project Name	FERC Function	Operation	Project Forecasted In-Service Date	Total Project Amount (System) Projected In-Service Costs (including AFUDC)	Projected Annual Net O&M	Projected Installation O&M
79	Triad - Area 252 Integrated Volt Var Controls	Distribution Plant in Service	Customer Delivery/Grid	Aug-24 - Dec-26	$ 7,106,778	$ 13,537	$ 135,367
80	Triangle North - 260 Area Capacity Upgrade Project	Distribution Plant in Service	Customer Delivery/Grid	Mar-25 - Aug-25	$ 18,610,200	$ -	$ -
81	Triangle North - 260 Substation & Line Project	Distribution Plant in Service	Customer Delivery/Grid	Jan-24 - Nov-26	$ 133,902,498	$ (341,224)	$ 2,322,775
82	Triangle North - 261 Area Capacity Upgrade Project	Distribution Plant in Service	Customer Delivery/Grid	Jun-24	$ 5,115,558	$ -	$ -
83	Triangle North - 261 Substation & Line Project	Distribution Plant in Service	Customer Delivery/Grid	Jan-24 - Dec-26	$ 159,088,631	$ (584,061)	$ 2,759,673
84	Triangle North - Area 260 Integrated Volt Var Controls	Distribution Plant in Service	Customer Delivery/Grid	Dec-24 - Dec-26	$ 3,264,906	$ 6,219	$ 62,190
85	Triangle North - Area 261 Integrated Volt Var Controls	Distribution Plant in Service	Customer Delivery/Grid	Aug-24 - Aug-26	$ 26,309,405	$ 50,112	$ 501,131
86	Catawba Nuclear Station Main Step-Up Transformer Replacement	Nuclear Plant in Service	Nuclear	Oct-24	$ 4,003,909	$ (10,000)	$ 4,794
87	Catawba Nuclear Station Unit 1 High Pressure Turbine Nozzles and Diaphragms Replacement	Nuclear Plant in Service	Nuclear	Oct-24	$ 3,369,410	$ -	$ 332
88	Catawba Nuclear Station Unit 1 Protective Relay Replacements	Nuclear Plant in Service	Nuclear	Dec-24	$ 1,302,455	$ -	$ 84,964
89	Catawba Nuclear Station Unit 1 Reactor Coolant Pump Motors Replacement	Nuclear Plant in Service	Nuclear	Oct-24	$ 1,211,914	$ -	$ 153,600
90	Catawba Nuclear Station Unit 1 Reactor Coolant Pump Seals Replacement (2024)	Nuclear Plant in Service	Nuclear	Oct-24	$ 229,634	$ -	$ -
91	Catawba Nuclear Station Unit 1 Reactor Coolant Pump Seals Replacement (2026)	Nuclear Plant in Service	Nuclear	Apr-26	$ 247,291	$ -	$ -
92	Catawba Nuclear Station Unit 2 High Pressure Turbine Nozzles and Diaphragms Replacement	Nuclear Plant in Service	Nuclear	Apr-24	$ 2,530,494	$ -	$ -
93	Catawba Nuclear Station Unit 2 Nuclear Service Water Pumps Replacement	Nuclear Plant in Service	Nuclear	Oct-25	$ 280,573	$ -	$ -
94	Catawba Nuclear Station Unit 2 Protective Relay Replacements (2024)	Nuclear Plant in Service	Nuclear	Apr-24	$ 1,178,796	$ -	$ -
95	Catawba Nuclear Station Unit 2 Protective Relay Replacements (2025)	Nuclear Plant in Service	Nuclear	Oct-25	$ 1,416,459	$ -	$ 72,009
96	Catawba Nuclear Station Unit 2 Reactor Coolant Pump Motors Replacement	Nuclear Plant in Service	Nuclear	Apr-24	$ 1,217,037	$ -	$ 307,200
97	Catawba Nuclear Station Unit 2 Reactor Coolant Pump Seals Replacement	Nuclear Plant in Service	Nuclear	Oct-25	$ 235,587	$ -	$ -
98	Fleet Firewall Replacement	Nuclear Plant in Service	Nuclear	Dec-25	$ 19,854,388	$ -	$ -

SUMMARY OF OPERATING INCOME IMPACTS FOR MYRP ADJUSTMENTS
FOR THE MYRP PLAN PERIOD - THIRD SUPPLEMENTAL
(Thousands of Dollars)

Line No.	Description		North Carolina Retail Operations Rate Year 1 [a] Operating Income Impacts from MYRP Projects (Col. 1)	Revenue and Expenses from Proposed Increase (Col. 2)	After Proposed Increase (Col. 3)
1	Electric operating revenue	[b]		$ 162,576	$ 162,576
	Electric operating expenses:				
	Operation and maintenance:				
2	Fuel used in electric generation				
3	Purchased power				
4	Other operation and maintenance expense		16,368	1,189	17,557
5	Depreciation and amortization		41,761		41,761
6	General taxes		570		570
7	Interest on customer deposits				
8	EDIT Amortization (net of tax)				
9	Net income taxes	[c]	(19,215)	37,684	18,469
10	Amortization of investment tax credit		(52)		(52)
11	Amortization of production tax credit				
12	Total electric operating expenses (Sum L2:L11)		$ 39,432	$ 38,873	$ 78,305
13	Operating income (L1-L12)		$ (39,432)	$ 123,703	$ 84,271
14	Rate Base (13 Month Average)	[d]	$ 1,100,834		$ 1,100,834
15	Rate of return on North Carolina retail rate base (L13/L14)		-3.58%		7.66%

Notes:
[a] Rate Year 1: January 2024 - December 2024
[b] Abernathy Third Supplemental Exh bit 4 line 17
[c] Includes operating revenue income taxes and tax related to the rate base component.

MYRP REVENUE REQUIREMENT CALCULATION
FOR THE MYRP PLAN PERIOD - THIRD SUPPLEMENTAL
(Thousands of Dollars)

Line No.	Description		North Carolina Retail Operations Rate Year 1 (*cumulative*) (Col. 1)	Rate Year 2 (*cumulative*) (Col. 2)	Rate Year 3 (*cumulative*) (Col. 3)
	OPERATING INCOME				
1	Depreciation Expense		$ 41,761	$ 87,060	$ 140,101
2	Incremental O&M Expense	[a]	16,368	8,227	6,500
3	Property Taxes		570	4,003	7,470
4	Income Taxes		(13,706)	(23,184)	(35,976)
5	Amortization of Investment Tax Credit (ITC)		(52)	(927)	(3,547)
6	Amortization of Production Tax Credit (PTC)				(2,019)
7	Operating Income (L1:L6)		$ 44,941	$ 75,178	$ 112,529
8	Retention Factor	[b]	76.09%	76.09%	76.09%
9	Operating Income Revenue Requirement (L7/L8)		$ 59,064	$ 98,803	$ 147,890
	RETURN ON RATE BASE				
10	Electric Plant In-Service	[c]	$ 1,121,390	$ 2,676,261	$ 4,208,742
11	Accumulated Depreciation	[c]	(20,560)	(84,547)	(197,982)
12	ITC Net Rate Base Impact		4	397	2,733
13	PTC Rate Base Impact				621
14	Total Rate Base (L10:L13)		$ 1,100,834	$ 2,592,112	$ 4,014,114
15	Return on Rate Base	[d]	9.40%	9.40%	9.40%
16	Rate Base Revenue Requirement (L14*L15)		$ 103,513	$ 243,739	$ 377,452
17	**Cumulative MYRP Revenue Requirement (L9+L16)**		**$ 162,576**	**$ 342,542**	**$ 525,343**
18	Incremental MYRP Rate Year Revenue Requirement		$ 162,576	$ 179,966	$ 182,800
19	**NC Retail Operations Base Rate Revenue Requirement**	[e]	**$ 5,615,798**		
20	4% Annual Increase Test for Rate Years 2 & 3	[f]		3.2%	3.3%
21	**Total Base Rate Revenue Requirement (L17+L19)**		**$ 5,778,374**	**$ 5,958,340**	**$ 6,141,141**

Notes:
[a] Incremental O&M amounts, including savings offsets, the Company expects to experience as a result of MYRP projects
[b] The Retention Factor is a consolidated rate which includes income taxes, gross receipts tax and the regulatory fee
[c] Plant balances reflect 13-month averages ended December for each MYRP Rate Year
[d] The Return on Rate Base percentage is grossed up for income taxes related to return on rate base, gross receipts tax and the regulatory fee
[e] Source: Beveridge Exhibit 4, Page 1, Column J plus Column N
[f] As described in HB951, excludes the Rate Year 1 MYRP Revenue Requirement for purposes of the 4% revenue increase calculation

MYRP REVENUE REQUIREMENT CALCULATION
FOR THE MYRP PLAN PERIOD - PARTIAL SETTLEMENT
(Thousands of Dollars)

Line No.	Description		North Carolina Retail Operations Rate Year 1 (*cumulative*) (Col. 1)	Rate Year 2 (*cumulative*) (Col. 2)	Rate Year 3 (*cumulative*) (Col. 3)
	OPERATING INCOME				
1	Depreciation Expense		$ 36,972	$ 76,305	$ 121,897
2	Incremental O&M Expense	[a]	5,563	1,474	3,565
3	Property Taxes		522	3,565	6,717
4	Income Taxes		(10,054)	(18,994)	(30,864)
5	Amortization of Investment Tax Credit (ITC)		(48)	(865)	(3,241)
6	Amortization of Production Tax Credit (PTC)				(2,019)
7	Operating Income (L1:L6)		$ 32,955	$ 61,484	$ 96,055
8	Retention Factor	[b]	76.09%	76 09%	76.09%
9	Operating Income Revenue Requirement (L7/L8)		$ 43,310	$ 80,806	$ 126,240
	RETURN ON RATE BASE				
10	Electric Plant In-Service	[c]	$ 1,022,028	$ 2,414,419	$ 3,741,704
11	Accumulated Depreciation	[c]	(18,596)	(74,589)	(173,806)
12	ITC Net Rate Base Impact		4	370	2,534
13	PTC Rate Base Impact				621
14	Total Rate Base (L10:L13)		$ 1,003,435	$ 2,340,199	$ 3,571,053
15	Return on Rate Base	[d]	9.40%	9.40%	9.40%
16	Rate Base Revenue Requirement (L14*L15)		$ 94,354	$ 220,052	$ 335,791
17	**Cumulative MYRP Revenue Requirement (L9+L16)**		**$ 137,665**	**$ 300,857**	**$ 462,031**
18	Incremental MYRP Rate Year Revenue Requirement		$ 137,665	$ 163,193	$ 161,173
19	**NC Retail Operations Base Rate Revenue Requirement**	[e]	**$ 5,615,798**		
20	4% Annual Increase Test for Rate Years 2 & 3	[f]		2.9%	2.9%
21	**Total Base Rate Revenue Requirement (L17+L19)**		**$ 5,753,463**	**$ 5,916,655**	**$ 6,077,829**

Notes:
[a] Incremental O&M amounts, including savings offsets, the Company expects to experience as a result of MYRP projects
[b] The Retention Factor is a consolidated rate which includes income taxes, gross receipts tax and the regulatory fee
[c] Plant balances reflect 13-month averages ended December for each MYRP Rate Year
[d] The Return on Rate Base percentage is grossed up for income taxes related to return on rate base, gross receipts tax and the regulatory fee
[e] Source: Beveridge Exhibit 4, Page 1, Column J plus Column N
[f] As described in HB951, excludes the Rate Year 1 MYRP Revenue Requirement for purposes of the 4% revenue increase calculation
